EMDABS: DESIGN AND FORMAL SPECIFICATION OF A DATAMODEL FOR A CLINICAL RESEARCH DATABASE SYSTEM M.S. Thesis
F. M. Pfaffenhoefer, P. J. M. Cluitmans, and H. M. Kuipers Jan. 1991

107 p
(EUT-91-E-250; ISBN-9-06-144250-8; ETN-93-93155) Avail: CASI HC A06/MF A02

A clinical research data base system called EMDABS (Electrophysiologic Monitoring Data Base System) designed to store data collected during neuro-electrophysiologic monitoring sessions, was developed. The data base system was developed for servo-anesthesia research and will be useful for other neuro-electrophysiologic research. A data model of this data base system is needed to specify what information will be stored in the data base, what data structures exist, and which constraints (semantics) are forced on the data. A partial data model was developed that left the time related information collected during a monitoring session unspecified. The development of a time related data model which is highly flexible and contains all the time related information needed such as equipment settings, information on collected raw data, data derived from raw data, and events that took place during a monitoring session is described. The formal specification of the total data model is presented. ESA

THE NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM: EXPLORING CHALLENGES, CREATING OPPORTUNITIES
Ronald P. Septic May 1993 58 p Original contains color illustrations
(NASA-SP-7103; NAS 1.21:7103) Avail: CASI HC A04/MF A01; 27 functional color pages

The NASA Scientific and Technical Information (STI) Program offers researchers access to the world's largest collection of aerospace information. An overview of Program activities, products and services, and new directions is presented. The R&D information cycle is outlined and specific examples of the NASA STI Program in practice are given. Domestic and international operations and technology transfer activities are reviewed and an agenda for the STI Program NASA-wide is presented. Finally, the incorporation of Total Quality Management and evaluation metrics into the STI Program is discussed. CASI

TOWARDS A DESIGN THEORY FOR DATABASE TRIGGERS
A. P. J. M. Siebes, M. H. vanderVoort, and M. L. Kersten Jan. 1992 20 p Sponsored by Netherlands Organization for Applied Scientific Research
(CWI-CS-R9201; ETN-93-93214) Copyright Avail: CASI HC A03/MF A01

A framework for the formalism of data base triggers is presented. The parameters of trigger execution and the options for their setting are identified. This includes the execution of a single trigger, the execution of multiple triggers (priority functions), and the integration of triggers with transactions (nested triggers). The formalization framework is a step towards the development of a firmly based trigger design theory. Such a theory is needed to guide the development of well behaving applications. The development of a trigger design theory is initiated with the formulation of a sufficient condition for trigger independence. Development of a complete design theory requires solutions to issues not covered yet. Furthermore, a thorough study of nested triggers and their semantics is needed to fully formalize the integration of triggers with user initiated actions. ESA

THE PERFORMANCE OF CITED REFERENCES AS AN APPROACH TO INFORMATION RETRIEVAL Ph.D. Thesis
Lanju Lee Yoon 1992 292 p
Avail: Univ. Microfilms Order No. DA9310395

Databases publicly available for online searching permit both citation and subject searching, however, subject searching has dominated the online search environment. Despite the power of citation searching it may be underutilized. This study explored the relationship between information retrieval effectiveness and the number of cited references used in a citation search, a relatively unstudied phenomenon. Three articles in the library and information science literature were chosen to represent sample questions. Cited reference searches were conducted for each article and each of its references. All searches were conducted in SOCIAL SCISEARCH and SCISEARCH on DIALOG. Relevance judgments on the retrieved citations were obtained from the authors of the original articles. This research focused on analyzing, in terms of information retrieval effectiveness, the overlap among postings sets retrieved by various combinations of cited references. The findings from the three case studies clearly showed that the more cited references used for the citation search, the better the performance, in terms of retrieving more relevant documents, up to a point of diminishing returns. In addition, generally the overall level of overlap among relevant documents sets was found to be low. Therefore, if only some of the cited references among many candidates are used for a citation search, a significant proportion of relevant documents may be missed. The findings of this comprehensive exploratory study are of interest for both theoretical and practical reasons. They contribute to the development of a theoretical model for the effective use of the citation search. This model might also be implemented in operational online systems. In addition, the findings potentially will help online searchers improve their search strategies using the citation search so that they can better achieve their information retrieval goals: the retrieval of items relevant to a given question and the suppression of nonrelevant items. DATA COMPRESSION TECHNIQUES FOR DIGITAL VIDEO RECORDING Ph.D. Thesis
Peter Hendrik Nelis deWith 1992 307 p
(ETN-93-93610) Avail: CASI HC A14/MF A03

An overview of investigations on compression techniques for experimental digital video recorders of the last decade, which also reviewed HDTV (High Definition Television) consumer recording, electronic still picture storage, and low rate multimedia applications, is presented. An intraframe Discrete Cosine Transform (DCT) coding system for compressing standard resolution YUV component TV signals with a factor of 4 to 6 to a bit rate of 20 to 25 Mbit/s is described. This architecture was employed successfully in an experimental digital recording system. Measures for enhancing the system robustness for both errors and during the trick modes are investigated. Bit rate reduction and recording of HDTV signals for consumer applications was studied in two ways: a gradual introduction of HDTV recording based on already existing digital TV recorders; and HDTV recording with TV recording features on the same (small) recording mechanics. In such a system, HDTV signals can be independently coded from the TV

signals, but they need to be more compressed than TV signals, because feasible recording mechanics allow only for the double or triple bit rate used for TV signals. The additional bit rate reduction was obtained by applying motion compensated DCT coding every second video frame. This technique was combined with intraframe DCT coding in every first frame, thereby creating a feasible system which still allows for editing and trick modes on two frame basis, and which offers a compressed HDTV bit rate around 50 Mbit/s. EVOLVING INFORMATION SYSTEMS: BEYOND TEMPORAL INFORMATION SYSTEMS
E. D. Falkenberg, J. L. H. Oei, and H. A. Proper 21 Feb. 1992 15 p
Sponsored by Netherlands Organization for Scientific Research
(TR-92-04; ETN-93-93139) Avail: CASI HC A03/MF A01

The need for information systems which are capable of evolving to the same extent as organizations do is discussed. Requirements of evolving organizations on their information systems are identified, and this is followed by alternative approaches to adequate information systems development life cycles. An evolutionary approach which results in so called evolving information systems is adopted. On the basis of requirements and an architecture for these evolving information systems, the distinction from traditional information systems is explained. Traditional information systems, including temporal information systems, appear to be degenerations of our evolving informations systems. A conceptual framework for update on evolving information systems is derived from the requirements. An event level, a recording level, and a correction level are distinguished in this framework for update. ESA

A META MODEL FOR UPDATE IN EVOLVING INFORMATION SYSTEMS
E. D. Falkenberg, J. L. H. Oei, and H. A. Proper 21 Feb. 1992 17 p
Sponsored by Netherlands Organization for Scientific Research
(TR-92-05; ETN-93-93140) Avail: CASI HC A03/MF A01

The presentation focuses on evolving information systems. An evolving information system supports the information needs of an evolving organization. Such a system is able to adapt itself instantaneously to the changes of the supported organization, such that there is no need to interrupt the activities of the organization. Furthermore, evolving information systems support changes of all time and application dependent aspects, such as the database as well as the schema of the application. A framework for the processing of updates in evolving information systems is presented. In this framework, an update is regarded as recording, correction, or forgetting, and state transitions are considered on three different levels of abstraction: the event level, the recording level, and the correction level. A formal specification of this framework is provided. ESA

INDEX EXPRESSION BELIEF NETWORKS FOR INFORMATION DISCLOSURE
P. D. Bruza and L. C. vanderGaag (Utrecht State Univ., Netherlands.) 2 Apr. 1992 25 p Sponsored in part by EEC/ESPRIT
(TR-92-12; ETN-93-93144) Avail: CASI HC A03/MF A01

The incorporation of semantics into the retrieval mechanism to extend the effectiveness of information disclosure is addressed. A promising mechanism for information disclosure, called the Refinement Machine, is described. The Refinement Machine features the language of index expressions as a language for characterizing information objects and a deduction mechanism driven by rules of inference. Two types of inference rules are distinguished. The rules of strict inference follow the line of traditional logical deduction. As the characterizations of objects are incomplete and requests are typically partial descriptions of the information need, the rules of strict inference are supplemented with a rule of plausible inference. This rule of plausible inference is motivated by recent work in the area of plausible reasoning in knowledge based systems and, in particular, is derived from the work on belief networks. Some preliminary experimental results are also presented. ESA

CURRENT TRENDS IN THE SEMANTICS OF DATAFLOW
Joost N. Kok Jun. 1992 22 p
(RUU-CS-92-22; ETN-93-93291) Avail: CASI HC A03/MF A01

A report to present semantic models for (possibly nondeterministic) dataflow in a uniform way is presented. Besides an operational model, models based on histories, streams, and traces, are given, and the results about full abstraction are collected. A method for describing the behavior of networks with equations is given. As a new element, it is shown how the hiaton model (a relational stream model) can be made fully abstract by adding elements to the relation. ESA

INFORMATION EXTRACTION AND INTEGRATION IN MINERAL EXPLORATION Ph.D. Thesis
Adel Ahmed Mahmoud El-Fouly 1992 219 p
Avail: Univ Microfilms Order No. DA9310594

Geologic information extraction and integration are the main goals of this study. Tools are designed to aid in exploration for common mineral deposits by intelligently and efficiently processing spatial geological data. Gabor filters, comprising Gaussian-attenuat ed sinusoidal weight vectors, are used for textural discrimination. A highly nonlinear logic operator was designed for 'valley,' 'ridge,' edge, and intersection extraction from multispectral images to cover most of the possible local lineament types. A zonation detector indicates the presence or absence of lithologic zonation. Two different types of raster-based expert systems help optimize pixel-by-pixel knowledge extraction and representation over the spatial information and throughout the different raster feature layers. First a 2-D expert system is used for classification, ranking, recognition, and searching for important pattern associations in the feature space. Second, a multilayer adaptive raster-based expert system allows the processing of multiple geologic features, and operates over each pattern in the feature layers. The fuzzy integral method of evidence fusion is used to integrate information from a variety of mineral exploration sources. This nonlinearly combines objective mineral occurrence evidence, in the form of a fuzzy membership function, with subjective evaluation of the worth of the sources with respect to the decision. An application of these methods to the Tombstone mineral district in southern Arizona demonstrates its ability to pick out circular

features from TM imagery, Gabor transforms and lineament patterns, as well as identify favorable zonation for new mineral occurrence. The final product at this time is a probability map to guide the exploration geologist. Dissert. Abstr.

PICTURE DATA COMPRESSION CODER USING SUBBAND/TRANSFORM CODING WITH A LEMPEL-ZIV-BASED CODER Patent Application
Daniel R. Glover, inventor (to NASA) 11 Mar. 1993 18 p
(NASA-Case-LEW-15700-1; NAS 1.71:LEW-15700-1;
US-Patent-Appl-SN-029520) Avail: CASI HC A03/MF A01

The present invention is a subband/transform coding system. The invention produces a digitally encoded signal which is a transformed version of an analog signal such as a video signal. The digitally encoded signal maintains the integrity of the original signal but allows transmission at low data rates. The transformed data is organized into frequency subbands with the lowest frequency subband being a low resolution version of the original signal. Once the data is transformed into subbands, it is coded with statistical coders. The statistical coder used in this invention is a Lempel-Ziv-based coder. NASA

SEMANTIC MODELS FOR DISTRIBUTED DATA BASE MANAGEMENT. PART 1: DEVELOPMENT OF A METAMODEL FOR FRAGMENTATION [SEMANTISCHE MODELLEN VOOR GEDISTRIBUEERD DATABASE MANAGEMENT. 1. DE ONTWIKKELING VAN EEN METAMODEL VOOR FRAGMENTATIE]
J. A. Bakker 1992 37 p In DUTCH
(Rept-92-33; ETN-93-93125) Copyright Avail: CASI HC A03/MF A01

Distributed Database Management Systems (D-DBMS) were investigated with a view to the development of semantic metamodels for (logic) fragmentation and (physical) allocation of data. The different reasons for the utilization of a distributed database are discussed. The functional requirements for a D-DBMS are outlined. In order to avoid unnecessary complexity it is supposed that all sites of a prototype semantic D-DBMS are connected with a network system, have the same hardware architecture, and use the same operating system, communication protocol and Xplain semantic data language. The difference between horizontal and vertical fragmentation is explained. ESA

In this paper we study the difficulty of solving problems in economics. For this purpose, we adopt the notion of undecidability from recursion theory. We show that certain problems in economics are undecidable, i.e., cannot be solved by a Turing Machine, a device that is at least as powerful as any computational device that can be constructed. In particular, we prove that even in finite closed economies subject to a variable initial condition, in which a social planner knows the behavior of every agent in the economy, certain important social planning problems are undecidable. Thus, it may be impossible to make effective policy decisions. Philosophically, this result formally brings into question the Rational Expectations Hypothesis which assumes that each agent is able to determine what it should do if it wishes to maximize its utility. We show that even when an optimal rational forecast exists for each agency (based on the information currently available to it), agents may lack the ability to make these forecasts. For example, Lucas describes economic models as 'mechanical, artificial world(s), populated by ... interacting robots'. Since any mechanical robot can be at most as computationally powerful as a Turing Machine, such economies are vulnerable to the phenomenon of undecidability. Author

SPACE STATION: INFORMATION ON NATIONAL SECURITY APPLICATIONS AND COST. REPORT TO THE HONORABLE JOHN W. WARNER, US SENATE
May 1993 15 p
(GAO/NSIAD-93-208; B-253473) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

The Department of Defense (DoD) has no formal requirement for a manned space station for national security purposes. In fact, for many of DoD'S space research needs, the facilities of Space Station Freedom would be less suitable than those currently available on the space shuttle. Some research that DoD currently conducts on the shuttle, particularly that which would benefit from extended stays in orbit, could be enhanced by the capabilities of the space station. However, certain shuttle upgrades might satisfy additional DoD research needs. In March 1993, NASA revised its cost estimate for the station to $31.3 billion. At the same time, NASA stretched the schedule for having permanent occupants in the space station to 2000. The $31.3 billion estimate, like previous estimates, excluded substantial budgetary resources required to successfully complete development and support the station over its planned 30-year life. Additional funding necessary to support and outfit the station for permanent occupancy would be another $11.7 billion. Further, at least $78 billion would be required to bring the facility to its full planned capability and maintain, supply, and operate the station after permanent occupancy was achieved. When these costs are included, the space station funding requirements through 2027 would be at least $121 billion. This report responds to a request that we do the following: (1) provide information on the potential use of SSF by the DoD; (2) update information of SSF's total cost; and (3) identify other existing and planned space stations. CORDOBA DURCHMUSTERUNG, VOLUME 1
Washington May 1993 454 p
(Contract NAS5-30960; RTOP 633-00-00)
(NASA-RP-1299-Vol-1; Rept-93B00049-Vol-1; NAS 1.61:1299-Vol-1) Avail: CASI HC A20/MF A04

The 'Cordoba Durchmusterung' (CD) is a visual survey of southern stars in the declination zones -22 to -89 deg, carried out as an extension to the 'Bonner Durchmusterung' (BD) catalogs of Argelander and Schoenfeld. This volume covers the declination range -22 deg through -30 deg. The survey was performed using techniques similar to those used for the BD; i.e., the stars were cataloged by allowing the telescope to drift along the mean declination of each zone and recording the positions and magnitudes of stars crossing the transit line of the field. The goal of the survey was to obtain a position and estimated visual magnitude for every star down to 10.0 magnitude inclusive, but the faint limit was confirmed from comparisons with other catalogs, to be somewhat below 10. The positions are given to 0.1 s in right ascension and 0.1 min in declination for the equinox 1875. The positional uncertainties quoted in the original publications are plus or minus 0.42 s and plus or minus 0.23 min for zones -22 deg to -32 deg. A list of all corrections made to the original data as a result of published corrigenda is presented. No other corrections or changes were incorporated into the original data, e.g., from more modern positions and magnitudes or comparison with the 'Cape Photographic Durchmusterung'.

The 'Cordoba Durchmusterung' (CD) is a visual survey of southern stars in the declination zones -22 to -89 deg, carried out as an extension to the 'Bonner Durchmusterung' (BD) catalogs of Argelander and Schoenfeld. This volume covers the declination range -31 deg through -39 deg. The survey was performed using techniques similar to those used for the BD; i.e., the stars were cataloged by allowing the telescope to drift along the mean declination of each zone and recording the positions and magnitudes of stars crossing the transit line of the field. The goal of the survey was to obtain a position and estimated visual magnitude for every star down to 10.0 magnitude inclusive, but the faint limit was confirmed from comparisons with other catalogs, to be somewhat below 10. The positions are given to 0.1 s in right ascension and 0.1 min in declination for the equinox 1875. The positional uncertainties quoted in the original publications are plus or minus 0.42 s and plus or minus 0.23 min for zones -22 deg to -32 deg. A list of all corrections made to the original data as a result of published corrigenda is presented. No other corrections or changes were incorporated into the original data, e.g., from more modern positions and magnitudes or comparison with the 'Cape Photographic Durchmusterung'.

The Bonner Durchmusterung (BD) is a visual survey of stars in the declination zones +89 deg to -01 deg. This volume contains the data for the declination range +89 deg to +30 deg. The survey, completed by Argelander and his assistants in the years 1852-1861, was performed and the stars cataloged by allowing the telescope to drift along the mean declination of each zone and recording the positions and magnitudes of stars crossing the transit line of each field. The goal of the survey was to obtain a position and estimated visual magnitude for every star visible with the 78-mm Bonn telescope. Actual magnitude estimates were made and reported to 0.1 mag for all stars down to 9.5 mag, with fainter stars being assigned to 9.5. The positions are given to 0.1 s in right ascension and 0.1 min in declination for the equinox 1855. No corrections or changes were incorporated into the original data, except those listed (e.g., no changes were introduced from more modern positions and magnitudes or from comparison with other catalogs). WASHINGTON DOUBLE STAR CATALOG CROSS INDEX (1950 POSITION SORT)
Washington May 1993 429 p
(Contract NAS5-30960; RTOP 633-00-00)
(NASA-RP-1302; Rept-93B00053; NAS 1.61:1302) Avail: CASI HC A19/MF A04

A machine-readable version of the Washington Catalog of Visual Double Stars (WDS) was prepared in 1984 on the basis of a data file that was collected and maintained for more than a century by a succession of double-star observers. Although this catalog is being continually updated, a new copy for distribution is not expected to be available for a few years. The WDS contains DM numbers, but many of these are listed only in the notes, which makes it difficult to search for double-star information, except by position. Hence, a cross index that provides complete DM identifications is desirable, and it appears useful to add HD numbers for systems in that catalog. Aitken Double Star (ADS) numbers were retained from the WDS, but no attempt was made to correct these except for obvious errors. Author (revised)

The final report for the period 15 Mar. 1986 to 31 Mar. 1993 for the Cooperative Agreement is presented. The purpose of this Cooperative Agreement was to collaborate with NASA civil servant and contractor personnel, and other Institute personnel in a project to use all available cataloged astronomical infrared data to construct a detailed three dimensional model of the infrared sky. Areas of research included: IRAS colors of normal stars and the infrared excesses in Be stars; galactic structure; how to use the observed IRAS source counts as a function of position to deduce the physical structure of the galaxy; IRAS properties of metal-poor stars; IRAS database studies; and solar space exploration including projects such as the Space Station Gas-Grain Simulator and the Mars Rover/Sample Return Mission. The Third Teton Summer School on Astrophysics discussed the formation of galaxies, star formation in galaxies, galaxies and quasars at high red shift, and the intergalactic and intercluster medium and cooling flows. Observation and theoretical research on these topics was presented at the meeting and summaries of the contributed papers are included in this volume. For individual titles, see N93-26707 through N93-26894.

As the astronomical community moves ever more towards fewer and larger telescopes it is not just desirable but essential to make the maximum possible use of these new facilities. The Hitchhiker parallel CCD camera has been specially designed to increase the scientific output of a large telescope by imaging the off-axis field of view. The large data set collected by this instrument consists of deep CCD multicolor data of the distant Universe and is extremely well suited to the study of faint galaxies and their evolution, as well as other areas. The instrument's design and some of its projects are briefly discussed below and demonstrates the scientific value such instruments could have if incorporated on all new telescopes. Author

Liquid mirrors provide an exciting means to obtain large optical telescopes for substantially lower costs than conventional technologies. The liquid mirror concept has been demonstrated in the lab with the construction of a diffraction limited 1.5 m mirror. The mirror surface, using liquid mercury, forms a perfect parabolic shape when the mirror cell is

rotated at a uniform velocity. A liquid mirror must be able to support a heavy mercury load with minimal flexure and have a fundamental resonant frequency that is as high as possible, to suppress the amplitude of surface waves caused by small vibrations transmitted to the mirror. To minimize the transmission of vibrations to the liquid surface, the entire mirror rests on an air bearing. This necessitates the mirror cell being lightweight, due to the limited load capabilities of the air bearing. The mirror components must also have physical characteristics which minimize the effects of thermal expansion with ambient temperature fluctuations in the observatory. In addition, the 2.7 m mirror construction is designed so that the techniques used may be readily extended to the construction of large mirrors. To attain the goals of a lightweight, rigid mirror, a composite laminant construction was used. The mirror consists of a foam core cut to the desired parabolic shape, with an accuracy of a few mm. An aluminum hub serves as an anchor for the foam and skin, and allows precise centering of the mirror on the air bearing and drive system. Several plys of Kevlar, covered in an epoxy matrix, are then applied to the foam. A final layer of pure epoxy is formed by spin casting. This final layer is parabolic to within a fraction of a mm. An aluminum ring bonded to the circumference of the mirror retains the mercury, and incorporates stainless-steel hard-points for the attachment of balance weights. Derived from text

HEAVY ELEMENT ABUNDANCES AND MASSIVE STAR FORMATION

The determination of the stellar initial mass function (IMF) remains a great challenge in astronomy. In the solar neighborhood, the IMF is reasonable well determined for stellar masses from about 0.1 to 60 solar mass. However, outside the solar neighborhood, the IMF is poorly known. Among those frequently discussed arguments favoring a different IMF outside the solar neighborhood are the estimated time to consume the remaining gas in spiral galaxies, and the high rate of forming massive stars in starburst galaxies. An interesting question then is whether there may be an independent way of testing possible variations in the IMF. Indeed, the heavy elements in the interstellar medium are mostly synthesized in massive stars, so increasing, or decreasing, the fraction of massive stars naturally leads to a variation in the heavy element yield, and thus, the metallicity. The observed abundance should severely constrain any deviations of the IMF from the locally determined IMF. We focus on element oxygen, which is the most abundant heavy element in the interstellar medium. Oxygen is ejected only by massive stars that can become Type 1 supernovae, and the oxygen abundance is, therefore, a sensitive function of the fraction of massive stars in the IMF. Adopting oxygen enables us to avoid uncertainties in Type 1 supernovae. We use the nucleosynthesis results to calculate the oxygen yield for given IMF. We then calculate the oxygen abundance in the interstellar medium assuming instantaneous recycling of oxygen.

We concentrate on a type of QSO survey which depends on selecting QSO candidates based on combinations of colors. Since QSO's have emission lines and power-law continua, they are expected to yield broadband colors unlike those of stellar photospheres. Previously, the fraction of QSO's expected to be hiding (unselected) within the locus of stellar (U-J, J-F) colors was estimated at about 15 percent. We have now verified that the KK88 survey is at least 11 percent incomplete, but have determined that it may be as much as 34 percent incomplete. The 'missing' QSO's are expected to be predominantly at z less than or = 2.2. We have studied the proper motion and variability properties of all stellar objects with J less than or = 22.5 or F less than or = 21.5 in the SA 57 field which has previously been surveyed with a multicolor QSO search by KK88.

OMEGA FROM THE ANISOTROPY OF THE REDSHIFT CORRELATION FUNCTION
A. J. S. Hamilton *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 9-14 (For primary document see N93-26706 10-90)
Avail: CASI HC A02/MF A04

Peculiar velocities distort the correlation function of galaxies observed in redshift space. In the large scale, linear regime, the distortion takes a characteristic quadrupole plus hexadecapole form, with the amplitude of the distortion depending on the cosmological density parameter omega. Preliminary measurements are reported here of the harmonics of the correlation function in the CfA, SSRS, and IRAS 2 Jansky redshift surveys. The observed behavior of the harmonics agrees qualitatively with the predictions of linear theory on large scales in every survey. However, real anisotropy in the galaxy distribution induces large fluctuations in samples which do not yet probe a sufficiently fair volume of the Universe. In the CfA 14.5 sample in particular, the Great Wall induces a large negative quadrupole, which taken at face value implies an unrealistically large omega 20. The IRAS 2 Jy survey, which covers a substantially larger volume than the optical surveys and is less affected by fingers-of-god, yields a more reliable and believable value, omega = 0.5 sup +.5 sub -.25. This paper describes a number of ways to improve on the standard method for measuring the two-point correlation function of large scale structure in the Universe. Issues addressed are: (1) the problem of the mean density, and how to solve it; (2) how to estimate the uncertainty in a measured correlation function; (3) minimum variance pair weighting; (4) unbiased estimation of the selection function when magnitudes are discrete; and (5) analytic computation of angular integrals in background pair counts. Although the results of COBE's FIRAS experiment 1 constrain the deviation in energy from the CMB blackbody in the 500-5000 micron range to be delta E/E, sub cmb less than 0.005, primeval galaxies can still lead to a brilliant sub-mm sky of non-Gaussian sources that are detectable at 10 inch resolution from planned arrays such as SCUBA on the James Clerk Maxwell Telescope and, quite plausibly, at sub-arcsecond resolution in planned mm and sub-mm interferometers. Here, we apply our hierarchical peaks method to a CDM model to construct sub-mm and mm maps of bursting PG's appropriate for these instruments with minimum contours chosen to correspond to realistic observational parameters for them and which pass the FIRAS limits. A number of active galaxies are now known at very large redshifts, some of them even have properties suggestive of galaxies in the process of formation. They commonly show strong Ly-alpha emission, at least some of which appears to be ionized by young stars. Inferred star formation

rates are in the range approximately = 100-500 solar mass/yr. An important question is: are there radio-quiet, field counterparts of these systems at comparable redshifts? Whereas, we are probably already observing some evolutionary and formative processes of distant radio galaxies, the ultimate goal is to observe normal galaxies at the epoch when most of their stars form. We have, thus, started a search for emission-line objects at large redshifts, ostensibly young and forming galaxies. Our method is to search for strong line emission (hopefully Ly alpha) employing two techniques: a direct, narrow-band imaging search, using a Fabry-Perot interferometer; and a serendipitous long-slit spectroscopic search. SOME EFFECTS OF DUST ON PHOTOMETRY OF HIGH-z GALAXIES: CONFOUNDING THE EFFECTS OF EVOLUTION
H. A. Thronson, Jr., A. N. Witt (Ritter Observatory, Toledo, OH.), and J. Capuano (Ritter Observatory, Toledo, OH.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 25-26 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Photometric observations of very distant galaxies--e.g., color vs. z or magnitude vs. z, have been used over the past decade or so in investigations into the evolution of the stellar component. Numerous studies have predicted significant color variations as a result of evolution, in addition to the shifting of different rest wavelengths into the band of observation. Although there is significant scatter, the data can be fit with relatively straightforward, plausible models for galaxian evolution. In very few cases are the effects of dust extinction included in the models. This is due in a large part to the uncertainty about the distribution and optical properties of the grains, and even whether or not they are present in significant numbers in some types of galaxies such as ellipticals. It is likely that the effects of dust on broadband observations are the greatest uncertainty in studies of very distant galaxies. We use a detailed Monte Carlo radiative transfer model within a spherical geometry for different star/dust distributions to examine the effects of dust on the broadband colors of galaxies as a function of redshift. The model fully accounts for absorption and angular redistribution in scattering. In this summary, we consider only the effects on color vs. redshift for three simple geometries each with the same total dust optical depth. Elsewhere at this conference, Capuano, Thronson, & Witt consider other effects of altering the relative dust/star distribution. Author

THE NATURE OF FAINT EMISSION-LINE GALAXIES
John J. Smetanka *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 27-28 (For primary document see N93-26706 10-90)

One of the results of faint galaxy redshift surveys is the increased fraction of galaxies which have strong emission-line spectra. These faint surveys find that roughly 50 percent of the galaxies have an equivalent width of (OII), W sub 3727, greater than 20 A while this fraction is less than 20 percent in the DARS survey. This has been interpreted as evidence for strong evolution in the galaxy population at redshifts less than 0.5. In order to further investigate the properties of the galaxies in faint redshift surveys, two important factors must be addressed. The first is the observed correlation between color, luminosity, and W sub 3727. There is a correlation between color and the strength of emission lines, bluer galaxies having stronger emission features, as evident for Markarian galaxies and for galaxies in Kennicutt's spectrophotometric atlas. This correlation also applies galaxies in faint redshift surveys. In addition, low luminosity galaxies have a larger average W sub 3727 (and bluer colors) than higher luminosity galaxies. This is illustrated for Kennicutt's low z late-type galaxies, for the Durham Faint Surveys, and for galaxies in SA68. The second factor which must be incorporated into any interpretation of the faint emission galaxies is the different luminosity functions for galaxies depending on color. This is usually modeled by varying M* for different color classes (or morphological types); however, the shape of the luminosity function is different for galaxies with different colors. Low luminosity, blue galaxies have a much larger number density than low luminosity, red galaxies. Furthermore, the low luminosity end of the blue galaxy luminosity function is not well fit by a Schechter function. These two factors have been included in a very simple, no-evolution, model for the galaxy population. This model uses the luminosity functions from Shanks (1990) and spectral energy distributions (SED's) from Bruzual (1988). W sub 3727 is predicted using the correlation (including dispersion) with color. Author

In spite of a lookback time of 77 to 89 percent of the age of the universe, Lilly provided evidence that the dominant stellar population in 0902 was surprisingly old, over 1 Gyr. This age estimate was based on the values K = 18.8 and I-K = 4.5 in the central 3.5 x 3.5 inch. At Lilly's suggestion, we reobserved 0902 at K, and in initial reductions of our data found only an upper limit (K greater than 19.5). After extensive experimentation with reduction techniques and correction for low-level systematic effects, we succeeded in extracting a four sigma detection at K = 19.9 in a 4 inch diameter circular aperture. The morphology and location of this detection were more reminescent of the Ly alpha image than of CCD continuum images, and in Mar. 1992, we obtained a narrow band image which included redshifted (OIII) 4959,5007 A line emission at 2.20 microns. This (OIII) image gave a strong detection which demonstrates that most of the central K flux, already reduced by a magnitude, is due to line emission. Our formal line corrected values in a 4 inch aperture are K = 21.5 and R-K = 1.9. Hence, 0902 has been transformed from relaxed maturity into unsettled youth. Derived from text

A COMPARISON OF THE NEAR-INFRARED SPECTRAL FEATURES OF EARLY-TYPE GALAXIES IN THE COMA CLUSTER, THE VIRGO CLUSTER AND THE FIELD
Mark L. Houdashelt and Jay A. Frogel *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 31-32 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Earlier researchers derived the relative distance between the Coma and Virgo clusters from color-magnitude relations of the early-type galaxies in each cluster. They found that the derived distance was color-dependent and concluded that the galaxies of similar luminosity in the two clusters differ in their red stellar populations. More recently, the color-dependence of the Coma-Virgo distance modulus has been called into question. However, because these two clusters differ so dramatically in their morphologies and kinematics, it is plausible that the star formation histories of the member galaxies also differed. If the conclusions of earlier researchers are indeed correct, then some signature of the resulting stellar population differences should appear in the near-infrared and/or infrared light of the respective galaxies. We have collected near-infrared spectra of 17 Virgo and 10 Coma early-type galaxies; this sample spans about four magnitudes in luminosity in each cluster. Seven field E/S0 galaxies have been observed for comparison. Pseudo-equivalent widths have been measured for all of the field galaxies, all but one of the Virgo members, and five of the Coma galaxies. The features examined are sensitive to the temperature, metallicity, and surface gravity of the reddest stars. A preliminary analysis of these spectral features has been performed, and, with a few notable exceptions, the measured pseudo-equivalent widths agree well with previously published values. EVERYTHING YOU EVER WANTED TO KNOW ABOUT THE ULTRAVIOLET SPECTRA OF STAR-FORMING GALAXIES BUT WERE AFRAID TO ASK
A. L. Kinney, R. Bohlin, D. Calzetti, N. Panagia, and R. Wyse (Johns Hopkins Univ., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 33 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present ultraviolet spectra of 143 star-forming galaxies of different morphological types and activity classes including S0, Sa, Sb, Sc, Sd, irregular, starburst, blue compact, blue compact dwarf, Liner, and Seyfert 2 galaxies. These IUE spectra cover the wavelength range from 1200 to

3200 A and are taken in a large aperture (10 x 20 inch). The ultraviolet spectral energy distributions are shown for a subset of the galaxies, ordered by spectral index, and separated by type for normal galaxies, Liners, starburst galaxies, blue compact (BCG) and blue compact dwarf (BCDG) galaxies, and Seyfert 2 galaxies. The ultraviolet spectra of Liners are, for the most part, indistinguishable from the spectra of normal galaxies. Starburst galaxies have a large range of ultraviolet slope, from blue to red. The star-forming galaxies which are the bluest in the optical (BCG and BCDG), also have the 'bluest' average ultraviolet slope of beta = -1.75 +/- 0.63. Seyfert 2 galaxies are the only galaxies in the sample that consistently have detectable UV emission lines. Author

THE ULTRAVIOLET SIGNATURE OF MASSIVE STARS IN STARBURST GALAXIES Progress Report
Robert Carmelle, Claus Leitherer (European Space Agency. European Space Research and Technology Center, ESTEC, Noordwijk, Netherlands.), and Timothy M. Heckman (Johns Hopkins Univ., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 34-35 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Studies in different spectral regimes of starburst galaxies clearly indicate the presence of hot, massive stars. However, only the UV spectral region can be used to directly identify the spectroscopic signature of these stars. The typical contributor to the integrated continuum at approximately 1400 A of a starburst is from the hot B stars. More massive stars are responsible for the majority to the UV lines which are broad photospheric absorption lines and wind emission or P Cygni profiles. We present a progress report of a study of the massive star population in starburst galaxies using the UV spectral region. Derived from text

A SEARCH FOR QUASAR PROTOCLUSTERS AT z GREATER THAN 4
J. D. Smith, D. Thompson, and S. Djorgovski *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 36-37 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

In the CDM and many other hierarchical scenarios for the origins of large scale structure, the existence of luminous quasars at very high redshifts (z greater than 3 or 4) is difficult to understand, unless such objects form at the very highest peaks of the density field. One then might expect a strong clustering of quasars at large redshifts. This is a generic prediction for practically any reasonable primordial density fluctuation spectrum. For CDM, Efstathiou & Rees (1988) predicted that quasars at z greater than 4 should be clustered as strongly as the bright galaxies at z approx. than 0. Cole & Kaiser (1989) suggest that z greater than 4 quasars might represent greater than or approximately = 4(sigma) peaks of the density field and thus, should be clustered more strongly than galaxies at z approximately = 0. We are performing the following experiment: a search for quasars, AGN, or other discrete objects, e.g., starforming galaxies, near known, z greater than 4 quasars. In other words, use the early quasars as markers of possible protoclusters. This is a fairly basic test of our understanding of the formation of galaxies, large-scale structure, and the origin of the first quasars themselves. Author

WIDE-FIELD DIRECT CCD OBSERVATIONS SUPPORTING THE ASTRO-1 SPACE SHUTTLE MISSION'S ULTRAVIOLET IMAGING TELESCOPE
Paul Hintzen (Nevada Univ., Las Vegas.), Ron Angione (San Diego State Univ., CA.), Freddie Talbert (San Diego State Univ., CA.), K.-P. Cheng, Eric Smith, and Theodore P. Stecher *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 38-39 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Wide field direct CCD observations are being obtained to support and complement the vacuum-ultraviolet (VUV) images provided by Astro's Ultraviolet Imaging Telescope (UIT) during a Space Shuttle flight in December 1990. Because of the wide variety of projects addressed by UIT, the fields observed include (1) galactic supernova remnants such as the Cygnus Loop and globular clusters such as Omega Cen and M79; (2) the Magellanic Clouds, M33, M81, and other galaxies in the Local Group; and (3) rich clusters of galaxies, principally the Perseus cluster and Abell 1367. Ground-based observations have been obtained for virtually all of the Astro-1 UIT fields. The optical images allow identification of individual UV sources in each field and provide the long baseline in wavelength necessary for accurate analysis of UV-bright sources. To facilitate use of our optical images for analysis of UIT data and other projects, we plan to archive them, with the UIT images, at the National Space Science Data Center (NSSDC), where they will be universally accessible via anonymous FTP. The UIT, one of three telescopes comprising the Astro spacecraft, is a 38-cm f/9 Ritchey-Chretien telescope on which high quantum efficiency, solar-blind image tubes are used to record VUV images on photographic film. Five filters with passbands centered between 1250A and 2500A provide both VUV colors and a measurement of extinction via the 2200A dust feature. The resulting calibrated VUV pictures are 40 arcminutes in diameter at 2.5 arcseconds resolution. The capabilities of UIT, therefore, complement HST's WFPC: the latter has 40 times greater collecting area, while UIT's usable field has 170 times WFPC's field area. Derived from text

RESULTS ON THE EVOLUTION OF GALAXIES AND THEIR ENVIRONMENT FROM THE ULTRAVIOLET IMAGING TELESCOPE ON ASTRO-1
Theodore P. Stecher *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 40 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The Ultraviolet Imaging Telescope (UIT), part of the Astro-1 Spacelab Mission, was used to obtain high-resolution surface brightness distribution data in six ultraviolet wavelength bands for the bright reflection nebula NGC 7023. The corresponding data from the visible leads us to conclude that the scattering in the near and far ultraviolet in this nebula is more strongly forward directed than it is in the visible. The UIT also obtained near-UV and far-UV images of the giant OB association NGC 206 in M32. Photometry was obtained for thirty massive stars. We analyzed UV imagery of two Sb bulges and two E galaxies obtained with UIT. For NGC 1275, the measured UV colors indicate a mass function which extends to eight solar masses but no higher. Other aspects of this investigation are discussed. Derived from text

THE PECULIAR VELOCITIES OF RICH CLUSTERS IN THE HOT AND COLD DARK MATTER SCENARIOS
George F. Rhee, Michael J. West (Leiden Univ., Netherlands.), and Jens V. Villumsen (Ohio State Univ., Columbus.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 41 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present the results of a study of the peculiar velocities of rich clusters of galaxies. The peculiar motion of rich clusters in various cosmological scenarios is of interest for a number of reasons. Observationally, one can measure the peculiar motion of clusters to greater distances than galaxies because cluster peculiar motions can be determined to greater accuracy. One can also test the slope of distance indicator relations using clusters to see if galaxy properties vary with environment. We have used N-body simulations to measure the amplitude and rms cluster peculiar velocity as a function of bias parameter in the hot and cold dark matter scenarios. In addition to measuring the mean and rms peculiar velocity of clusters in the two models, we determined whether the peculiar velocity vector of a given cluster is well aligned with the gravity vector due to all the particles in the simulation and the gravity vector due to the particles present only in the clusters. We have investigated the peculiar velocities of rich clusters of galaxies in the cold dark matter and hot dark matter galaxy formation scenarios. We have derived peculiar velocities and associated errors for the scenarios using four values of the bias parameter ranging from b = 1 to b = 2.5. The growth of the mean peculiar velocity with scale factor has been determined and compared to that predicted by linear theory. In addition, we have compared the orientation of force and velocity in these simulations to see if a program such as that

proposed by Bertschinger and Dekel (1989) for elliptical galaxy peculiar motions can be applied to clusters. The method they describe enables one to recover the density field from large scale redshift distance samples. The method makes it possible to do this when only radial velocities are known by assuming that the velocity field is curl free. Our analysis suggests that this program if applied to clusters is only realizable for models with a low value of the bias parameter, i.e., models in which the peculiar velocities of clusters are large enough that the errors do not render the analysis impracticable. A REVISED CATALOG OF CfA GALAXY GROUPS IN THE VIRGO/GREAT ATTRACTOR FLOW FIELD
Richard Nolthenius *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 42-43 Submitted for publication (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A new identification of groups and clusters in the CfAI Catalog of Huchra, et al. (1983) is presented, using a percolation algorithm to identify density enhancements. The procedure differs from that of the original Geller and Huchra (1983; GH) catalog in several important respects; galaxy distances are calculated from the Virgo-Great Attractor flow model of Faber and Burnstein (1988), the adopted distance linkage criteria is only approx. 1/4 as large as in the Geller and Huchra catalog, the sky link relation is taken from Nolthenius and White (1987), correction for interstellar extinction is included, and 'by-hand' adjustments to group memberships are made in the complex regions of Virgo/Coma I/Ursa Major and Coma/A1367 (to allow for varying group velocity dispersions and to trim unphysical 'spider arms'). Since flow model distances are poorly determined in these same regions, available distances from the IR Tully-Fisher planetary nebula luminosity function and surface brightness resolution methods are adopted if possible. A reexamination of Dressler's (1980) sample of nearly 6000 galaxies in 55 clusters shows that the morphology-clustercentric radius relation is more fundamental than the morphology-local density relation. This conclusion is supported by improved correlations when the projected clustercentric radius is used as the independent parameter, and by a comparison of galaxies with the same normalized clustercentric radii by different values of the projected local density. We investigate the role of mergers and interactions in the evolution of galaxies by studying galaxies in compact groups. Compact groups of galaxies have high spatial densities and low velocity dispersions making these regions ideal laboratories in which to study the effect of interactions and mergers. Based on a detailed spectroscopic and multi-color imaging study, we find that both the isophotal shapes and the stellar kinematics indicate that many of the elliptical galaxies in compact groups have been affected by tidal interactions. At the same time, however, we find that only a few elliptical galaxies in compact groups have evidence for the young stellar populations that would be expected if they are the result of recent merger of two spiral galaxies. Therefore, we conclude that tidal interactions affect galaxy properties at the current epoch, but the bulk of basic galaxy formation and transformation must have occurred at much higher redshift. GLOBULAR CLUSTER SYSTEMS AS CLUES TO GALAXY EVOLUTION
Stephen E. Zepf and Keith M. Ashman (Canadian Inst. for Theoretical Astrophysics, Toronto, Ontario.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 48-49 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We investigate the properties of systems of globular clusters in light of the hypothesis that galaxy mergers play a major role in galaxy evolution. In a previous paper, we presented a model in which the formation of globular clusters occurs during galaxy interactions and mergers. We discussed several predictions of the model, including the existence of young globular clusters in currently merging galaxies and the presence of two or more metallicity peaks in the globular clusters systems of normal elliptical galaxies. Here, we present recent observational evidence which supports both of these predictions and suggests that mergers may have a significant influence on the formation and evolution of galaxies and their globular clusters. GLOBULAR CLUSTER FORMATION IN MERGING GALAXIES?
D. Lutz *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 50-51 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The properties of a population of luminous blue clusters in the merging galaxy NGC 3597 are discussed, and the observability of the signature of such a population in later evolutionary stages of a merger is assessed. NGC 3597 is an advanced merger which has already developed into an elliptical-like object with a de Vaucouleurs brightness distribution, but intense star formation is continuing in the central 4 kpc. A population of unresolved blue objects that are concentrated towards the central region is identified as clusters belonging to NGC 3597. Author

CLUSTER EVOLUTION AS A PROBE OF PRIMORDIAL DENSITY FLUCTUATIONS
J. Richard Bond and Steven T. Myers *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 52-53 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Although COBE's detection of large angle microwave background anisotropies fixes the amplitude of density fluctuations on length scales k exp -1 approximately = (300-6000) h(exp -1)Mpc, what is crucial for the level of large scale clustering is the amplitude of density fluctuations on scales (5-50) h(exp -1)Mpc. The level of dynamical clustering is usually parameterized by the size of the mass fluctuations in 8 h exp -1 Mpc spheres, sigma sub 8. For the cold dark matter model, COBE gives sigma sub 8 approximately = 1, while models with extra large scale power give sigma sub 8 approximately = 1/2. The most massive clusters of galaxies (greater than or approximately = 10 exp 15 solar mass) form from rare 'peak patches' found in the initial mass density distribution. Their abundance as a function of redshift is a sensitive probe of the wave number band k(exp -1) approx. (3-8) h(exp -1)Mpc, hence of sigma sub 8, and so cluster evolution can discriminate among models allowed by the COBE results. We use our Hierarchical Peaks Method, which accurately reproduces the results of P3M N-body simulations, to calculate the evolution of cluster x-ray flux counts, luminosity, and temperature functions as a function of sigma sub 8 for CDM models and those with more large scale power. We find that the EMSS and Edge et al. cluster samples support sigma sub 8 in the range from approx. 0.6-0.9, and that models with more large scale power (and hence flatter fluctuation spectra in the cluster regime) fit the x-ray bright end better. CLUSTERING OF VERY LUMINOUS INFRARED GALAXIES AND THEIR ENVIRONMENT
Yu Gao *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 54-55 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The IRAS survey reveals a class of ultraluminous infrared (IR) galaxies

(ULIRG's) with IR luminosities comparable to the bolometric luminosities of quasars. The nature, origin, and evolution of ULIRG's are attracting more and more attention recently. Since galaxy morphology is certainly a function of environment, morphological observations show that ULIRG's are interacting/merging galaxies, and some ULIRG's might be the dust-enshrouded quasars (S88) or giant ellipticals, the study of ULIRG's environment and large scale clustering effects should be worthwhile. ULIRG's and very luminous IR galaxies have been selected from the 2Jy IRAS redshift survey. Meanwhile, a catalog of IRAS groups of galaxies has been constructed using a percolation-like algorithm. Therefore, whether ULIRG's and/or VLIRG's have a group environment can be checked immediately. Other aspects of the survey are discussed. Derived from text

GALAXY TRACERS IN N-BODY SIMULATIONS
F. J. Summers, August E. Evrard (Michigan Univ., Ann Arbor.), and Marc Davis *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 56-57 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Using the method of smoothed particle hydrodynamics, we have modeled the formation of a compact group of galaxies with sufficient resolution to trace galaxies. Radiative cooling allows the baryons to dissipate their thermal energy and collapse to overdensities characteristic of real galaxies. With their cross section greatly reduced, these galaxy tracers remain distinct during cluster formation while their dark matter halos merge. In addition, the number density, the mass distribution function, and even the morphology of these objects are similar to those of observed galaxies. A viable population of galaxy tracers can be unambiguously defined. Derived from text

THE LARGE-SCALE MORPHOLOGY OF IRAS GALAXIES
Arif Babul, Glenn D. Starkman, and Michael A. Strauss (Institute for Advanced Study, Princeton, NJ.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 58-59 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

At present, visual inspection is the only method for comparing the large-scale morphologies in the distribution of galaxies to those in model universes generated by N-body simulations. To remedy the situation, we have developed a set of three structure functions (S1, S2, S3) that quantify the degree of large-scale prolateness, oblateness, and sphericity/uniformity of a 3-D particle distribution and have applied them to a volume-limited (less than = 4000 km/s) sample of 699 IRAS galaxies with f sub 60 greater than 1.2 Jy. To determine the structure functions, we randomly select 500 galaxies as origins of spherical windows of radius R sub w, locate the centroid of the galaxies in the window (assuming all galaxies have equal mass) and then, compute the principal moments of inertia (I sub 1, I sub 2, I sub 3) about the centroid. Each S sub i is a function of (I sub 2)/(I sub 1) and (I sub 3)/I sub 1). S1, S2, and S3 tend to unity for highly prolate, oblate, and uniform distributions, respectively and tend to zero otherwise. The resulting 500 values of S sub i at each scale R sub w are used to construct a histogram. Author

THE SPATIAL CORRELATION PROPERTIES OF DARK GALAXY HALOS IN A CDM UNIVERSE
Tereasa G. Brainerd and Jens V. Villumsen *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 62-63 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We use the Hierarchical Particle Mesh (HPM) N-body code written by J. V. Villumsen (Villumsen, 1989) to investigate the two-point spatial correlation function, xi(r), of dark galaxy halos as a function of halo mass and local environment (i.e. high, low, or average mass density). We assume a standard cold dark matter (CDM) universe (omega = 1, delta = 0, H sub 0 = 50,km/sec/Mpc). Because of the large dynamic ranges in mass and length that can be obtained with the HPM code, it is well-suited to an investigation of this sort. Author

GAS DYNAMIC SIMULATIONS OF GALAXY FORMATION
August E. Evrard *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 64-65 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Results are presented from a simulation modeling the formation of a group of galaxies in a 'standard' cold, dark matter universe with delta = 1, h sub 0 = 50 km/(s(Mpc)), baryon fraction omega sub b = 0.1 and spectrum normalization sigma sub 8 = 0.6 (bias parameter b = 1.7). Initial conditions are generated within a periodic box with comoving length 16 Mpc in a manner constrained to produce a small cluster of total mass approximately 10 exp 14 solar mass. Two sets of 643 particles are used to model the dark matter and baryon fluids. Each gas particle represents 1.08 x 10 exp -8 solar mass, implying an L* galaxy is resolved by approximately 1000 particles. The system is evolved self-consistently in three dimensions using the combined N-body/hydrodynamic scheme P3MSPH up to a final redshift z = 1. Evolving to the present is prohibited by the fact that the mean density in the simulated volume is above critical and the entire volume would be going nonlinear beyond this point, We are currently analyzing another run with somewhat poorer mass resolution which was evolved to the present. THE GALAXY VELOCITY FIELD AND CDM MODELS
Giuseppe Tormen (Massachusetts Inst. of Tech., Cambridge.), Lauro Moscardini, Francesco Lucchin, and Sabino Matarrese *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 66-67 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

It is generally accepted that some kind of non-baryonic dark matter accounts for most of the mass density of the universe. Considering such a component has become, in the last decade, a key ingredient in current theories of structure formation. In particular, the Cold Dark Matter (CDM) scenario has proven to be quite successful in explaining most of the observed properties of galaxies and of their large-scale distribution. The standard CDM model is characterized by a primordial Zel'dovich spectrum, of random-phase adiabatic perturbations in a universe with density parameter omega sub 0 = 1 and vanishing cosmological constant. This poster paper presents an analysis of observational data on peculiar motion of optical galaxies in comparison to the predictions of CDM models where the assumptions of the standard scenario: omega sub 0 = 1, n = 1, and bias parameter b = 1 are relaxed. In particular, CDM models with 0 less than n less than 1 and 0.4 less than omega sub 0 less than 1 are considered. Author

THE HYDRODYNAMICS OF GALAXY FORMATION ON KILOPARSEC SCALES
Michael L. Norman, Wenbo Yuan Anninos, and Joan Centrella (Drexel Univ., Philadelphia, PA.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 68-69 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Two dimensional numerical simulations of Zeldovich pancake fragmentation in a dark matter dominated universe were carried out to study the hydrodynamical and gravitational effects on the formation of structures such as protogalaxies. Preliminary results were given in Yuan, Centrella and, Norman (1991). Here we report a more exhaustive study to

determine the sensitivity of protogalaxies to input parameters. The numerical code we used for the simulations combines the hydrodynamical code ZEUS-2D (Stone and Norman, 1992) which was modified to include the expansion of the universe and radiative cooling of the gas with a particle-mesh code which follows the motion of dark matter particles. The resulting hybrid code is able to handle highly nonuniform grids which we utilized to obtain a high resolution (much greater than 1 kpc) in the dense region of the pancake. Author

Using galaxies in complete samples as tracers of the galaxy density field and about 1000 galaxies with measured circular velocities as targets, we examine the cross-correlation functions between the targets and tracers as a function of galaxy circular velocities. The correlation strength does not vary with the circular velocities except for elliptical galaxies with the highest velocity dispersions, where the effect may well be due to morphological segregations in clusters of galaxies. This is contrasted with the strong dependence of the correlation functions of dark halos on their circular velocities in some models of galaxy formation. Author

THE EFFECT OF TIDAL FIELDS ON THE SHAPES AND KINEMATICS OF DARK HALOS
John Dubinski *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 72-73 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have carried out a series of N-body simulations to investigate the effect of tidal shear on the structure and kinematics of dark halos. We simulate the collapse of density perturbations using a tree code as described in Dubinski & Carlberg (1991). Density peaks are selected from a random realization of a CDM density field and used as the initial conditions for N-body simulations. We use an experimental approach to examine the effects of tidal shear on collapse. The cosmological tidal field is treated as an external time dependent potential whose strength and orientation can be varied freely. We examine the effects of the tidal field with two experiments. In the first experiment, we simulate a sample of 14 dark halos from the collapse of density peaks in the presence of a 1(sigma) tidal field. In the second experiment, we use the same initial conditions though the tidal field is turned off allowing an experimental control for comparison to highlight the influence of tidal shear on the development of the structure and kinematics of the dark halos. NEAR-IR IMAGING OF MODERATE REDSHIFT GALAXY CLUSTERS
S. A. Stanford, M. E. Dickinson, and P. R. M. Eisenhardt (Jet Propulsion Lab., California Inst. of Tech., Pasadena.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 74-75 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have obtained near-IR imaging of 3 moderate-z clusters on the 1.3 m at KPNO with SQIID, a new camera offering wide-field (5.5 arcmin) simultaneous JHK band imaging. Our photometry on a sample of approximately 100 likely member galaxies in one of the clusters, Abell 370 at z = 0.37, shows that we can obtain magnitudes good to 20 percent down to K = 18, considerably below the estimated K* = 16.5 at this redshift. These data indicate that there are no systematic problems in obtaining photometry at faint levels with SQIID. With the development of larger arrays, the field is open to progress. The resulting J, H, and K data for three clusters are combined with previously obtained multiband optical photometry. We present an investigation of the spectral properties and evolution of the dominant cold stellar populations by comparing optical-to-IR colors and color-magnitude diagrams to predictions from population synthesis models and galaxy spectral evolution codes. DISTANT RADIO GALAXIES IN THE NEAR IR
P. J. McCarthy, S. E. Persson, R. Elston, and P. R. M. Eisenhardt (Jet Propulsion Lab., California Inst. of Tech., Pasadena.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 76-77 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We are carrying out a program of near IR imaging and spectroscopy of radio galaxies with redshifts of 1.5 and greater. One of its principal goals is to constrain the ages and star formation histories of massive galaxies at early epochs. The radio galaxies are drawn from the survey of 1Jy class sources by McCarthy et al (1989) and McCarthy (1990). The sample contains 18 radio galaxies with redshifts greater than 2 and an additional 10 objects with 1.5 less than z less than 2.0. The redshifts were obtained from long slit spectra with the CTIO 4 m. While the galaxies are quite faint (r approximately = 21-24.5) all have Lyman alpha emission with rest frame equivalent widths of 100 - 1000 A. Multicolor photometry in the g,r,i and J,H,K bands has been obtained with the 2.5-m Du Pont Telescope on Las Campanas and with the Hale 5 m telescope at Palomar. We have recently obtained near IR spectra, using the 4 m telescopes at KPNO and CTIO, of a few objects with the goal of determining the Lyman alpha/H-alpha ratio and hence the reddening. Author

EXTREMELY RED OBJECTS IN THE FIELDS OF HIGH REDSHIFT RADIO GALAXIES
S. E. Persson, P. J. McCarthy, Alan Dressler, and Keith Matthews (California Inst. of Tech., Pasadena.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 78-79 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We are engaged in a program of infrared imaging photometry of high redshift radio galaxies. The observations are being done using NICMOS2 and NICMOS3 arrays on the DuPont 100-inch telescope at Las Campanas Observatory. In addition, Persson and Matthews are measuring the spectral energy distributions of normal cluster galaxies in the redshift range 0 to 1. These measurements are being done with a 58 x 62 InSb array on the Palomar 5-m telescope. During the course of these observations we have imaged roughly 20 square arcminutes of sky to limiting magnitudes greater than 20 in the J, H, and K passbands (3 sigma in 3 square arcseconds). We have detected several relatively bright, extremely red, extended objects during the course of this work. Because the radio galaxy program requires Thuan-Gunn gri photometry, we are able to construct rough photometric energy distributions for many of the objects. A sample of the galaxy magnitudes within 4 arcseconds diameter is given. All the detections are real; either the objects show up at several wavelengths, or in subsets of the data. The reddest object in the table, 9ab'B' was found in a field of galaxies in a rich cluster at z = 0.4; 9ab'A' lies 8 arcseconds from it. Author

FAINT BLUE COUNTS FROM FORMATION OF DWARF GALAXIES AT z APPROXIMATELY EQUALS 1
Arif Babul and Martin J. Rees (Cambridge Univ., England.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 80-81 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The nature of faint blue objects (FBO's) has been a source of much speculation since their detection in deep CCD images of the sky. Their high surface density argues against them being progenitors of present-day bright galaxies and since they are only weakly clustered on small scales, they cannot be entities that merged together to form present-day galaxies. Babul & Rees (1992) have suggested that the observed faint blue counts may be due to dwarf elliptical galaxies undergoing their initial starburst at z is approximately equal to 1. In generic hierarchical clustering scenarios, however, dwarf galaxy halos (M is approximately 10(exp 9) solar mass) are expected to form at an earlier epoch; for example, typical 10(exp 9) solar mass halos will virialize at z is approximately equal to 2.3 if the power-spectrum for the density fluctuations is that of the standard b = 2 cold dark matter (CDM) model. Under 'ordinary conditions' the gas would rapidly cool, collect in the cores, and undergo star-formation. Conditions at

high redshifts are far from 'ordinary'. The intense UV background will prevent the gas in the dwarf halos from cooling, the halos being released from their suspended state only when the UV flux has diminished sufficiently. Author (revised)

LOW SURFACE BRIGHTNESS GALAXIES AND TIDALLY TRIGGERED STAR FORMATION
Dennis Zaritsky and Stephen J. Lorrimer (Durham Univ., England.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 82-83 (For primary document see N93-26706 10-90)
(Contract NAS5-26555)
Avail: CASI HC A01/MF A04

Counts of companions to low surface brightness (LSB) galaxies are presented and these are compared to counts of companions to normal galaxies obtained with the same techniques and criteria. Our results are consistent with LSB's having no clustered companions and support the hypothesis that LSB galaxies have low star-formation rates because they lack external tidal triggering. MASSIVE LOW SURFACE BRIGHTNESS GALAXIES
Patricia M. Knezek and Stephen E. Schneider *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 84-85 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A multi-wavelength study of an extreme type of galaxy which will assist us in our attempts to understand the formation and evolution of galaxies was completed. In particular, a subset of low surface brightness (bar-mu(sub B) is approximately greater than 25 mag arcsec(sup -2)), giant galaxies (LSBG's) which contain large amounts of atomic gas (M(HI) is approximately greater than 10(exp 10) solar mass), have blue optical diameters similar to those of giant spiral galaxies, but which do not seem to have prodigious amounts of ongoing star formation were observed. Our sample was drawn from the first and second Palomar Sky Surveys. This population of galaxies has been largely ignored because of selection effects which make it difficult to detect optically. The question of how these massive systems differ from the higher surface brightness 'normal' spiral galaxies is addressed. Using B and R surface photometry, in conjunction with H-alpha, HI, CO-12, and far-infrared data, an attempt is made to determine if these galaxies had an early epoch of star formation that has since faded, have ongoing star formation with an unusual interplanetary magnetic field (IMF), or are perhaps galaxies which have never efficiently formed stars due to a lack of molecular clouds. OXYGEN ABUNDANCES IN LOW SURFACE-BRIGHTNESS GALAXIES
Jari Roennback *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 86-87 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Recent theories predict that some protogalaxies, in low-density environments of the field, are contracting and interacting so slowly that global star formation can be delayed until today. These systems should be gas rich and have low surface-brightness. Blue compact galaxies (BCG's) and other compact HII region galaxies currently experiencing a burst of star formation are good candidates of truly young galaxies (in the sense that global star formation recently has been initiated). If they really are young, they ought to have a recent phase when their brightness was much lower than in the bursting phase. No claims of observations of such proto-BCG's exist. Observations of galaxies in their juvenile phases would undoubtedly be of great interest, e.g. the determination of the primordial helium abundance would improve. A proper place to search for young nearby galaxies could be among blue low surface-brightness galaxies (BLSBG's) in the local field. The study of low surface-brightness galaxies (LSBG's) as a group began relatively recently. They are galaxies with extraordinary properties both as individuals and as a group. A few years ago we started an optical study of a sample of BLSBG's selected from the ESO/Uppsala catalogue. Results of spectroscopic observations obtained on a subsample - 8 galaxies - of our selection are reported. The HII region oxygen chemical abundances and its relation to the blue absolute magnitude and surface-brightness is investigated. Derived from text

CHEMICAL ABUNDANCES IN LOW SURFACE BRIGHTNESS GALAXIES: IMPLICATIONS FOR THEIR EVOLUTION
S. S. McGaugh and G. D. Bothun (Oregon Univ., Eugene.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 88-89 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Low Surface Brightness (LSB) galaxies are an important but often neglected part of the galaxy content of the universe. Their importance stems both from the selection effects which cause them to be under-represented in galaxy catalogs, and from what they can tell us about the physical processes of galaxy evolution that has resulted in something other than the traditional Hubble sequence of spirals. An important constraint for any evolutionary model is the present day chemical abundances of LSB disks. Towards this end, spectra for a sample of 75 H 2 regions distributed in 20 LSB disks galaxies were obtained. Structurally, this sample is defined as having B(0) fainter than 23.0 mag arcsec(sup -2) and scale lengths that cluster either around 3 kpc or 10 kpc. In fact, structurally, these galaxies are very similar to the high surface brightness spirals which define the Hubble sequence. Thus, our sample galaxies are not dwarf galaxies but instead have masses comparable to or in excess of the Milky Way. The basic results from these observations are summarized.

H II REGIONS IN THE DWARF GALAXY UGC-A 86
Bryan W. Miller and Paul Hodge *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 90-91 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The uncertain nature of the dwarf irregular galaxy UGC-A 86 (VIIZw009) makes it a very interesting object for studying star formation at the low end of the galaxy luminosity function. Saha and Hoessel (1991) find that this object is composed of two main parts, one of which appears more resolved than the other. The more resolved component has an excess of blue stars, suggesting that it is currently undergoing star formation. Thus, they argue that UGC-A 86 could be either a superposition of unrelated galaxies, two interacting galaxies, or a single galaxy. However, surface photometry performed by Richter et al. (1991) indicates that it is a single galaxy with an exponential luminosity profile. Richter et al. also find UGC-A 86 to be extremely dusty and to be associated with the infrared source IRAS 3550+6657. The uncertainty is compounded by the large ambiguity in the distance, though a heliocentric H1 velocity of 80 plus or minus 7 km s(sup -1) suggests that it is either a member of the Local Group or perhaps the IC 342 group. A distance of 1.5 Mpc and a reddening of E(B - V) = 0.65 is adopted. UGC-A 86 in H-alpha was observed in order to measure its current star formation rate. This is part of a larger project to study the star formation rates and histories of a complete sample of dwarf galaxies in the Local Group and other nearby groups. The H region luminosity function and size distribution for UGC-A 86 are presented and compared with previous observations of similar dwarf galaxies. Derived from text

LOW SURFACE BRIGHTNESS GALAXIES
J. M. vanderHulst, W. J. G. deBlok, S. S. McGaugh (Michigan Univ., Ann Arbor.), and G. D. Bothun (Oregon Univ., Eugene.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 92-93 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A program to investigate the properties of low surface brightness (LSB) galaxies involving surface photometry in U, B, V, R, I, and H-alpha, HI imaging with the Westerbork Synthesis Radio Telescope (WSRT) and the very large array (VLA) and spectrophotometry of H2 regions in LSB galaxies is underway. The goal is to verify the idea that LSB galaxies have low star formation rates because the local gas density falls below the critical density for star formation, and to study the stellar population and abundances in LSB galaxies. Such information should help understanding the evolutionary history of LSB galaxies. Some preliminary results are reported.

A FAINT FIELD-GALAXY REDSHIFT SURVEY IN QUASAR FIELDS
Howard K. C. Yee and Erica Ellingson (Colorado Univ., Boulder.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 94-95 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Quasars serve as excellent markers for the identification of high-redshift galaxies and galaxy clusters. In past surveys, nearly 20 clusters of Abell richness class 1 or richer associated with quasars in the redshift range 0.2 less than z less than 0.8 were identified. In order to study these galaxy clusters in detail, a major redshift survey of faint galaxies in these fields using the CFHT LAMA/MARLIN multi-object spectroscopy system was carried out. An equally important product in such a survey is the redshifts of the field galaxies not associated with the quasars. Some preliminary results on field galaxies from an interim set of data from our redshift survey in quasar fields are presented. Derived from text

CORRELATION BETWEEN LOW LEVEL FLUCTUATIONS IN THE X RAY BACKGROUND AND FAINT GALAXIES
Eline Tolstoy and R. E. Griffiths *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 99-100 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A correlation between low-level x-ray fluctuations in the cosmic x-ray background flux and the large numbers of galaxies found in deep optical imaging, to m(sub v) is less than or equal to 24 - 26, is desired. These (faint) galaxies by their morphology and color in deep multi-color CCD images and plate material were optically identified. Statistically significant correlations between these galaxies and low-level x-ray fluctuations at the same positions in multiple deep Einstein HRI observations in PAVO and in a ROSAT PSPC field were searched for. Our aim is to test the hypothesis that faint 'star burst' galaxies might contribute significantly to the cosmic x-ray background (at approximately 1 keV). Author (revised)

ANALYSIS OF THE EINSTEIN SAMPLE OF EARLY-TYPE GALAXIES
Paul B. Eskridge and Giuseppina Fabbiano *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 104-105 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The EINSTEIN galaxy catalog contains x-ray data for 148 early-type (E and SO) galaxies. A detailed analysis of the global properties of this sample are studied. By comparing the x-ray properties with other tracers of the ISM, as well as with observables related to the stellar dynamics and populations of the sample, we expect to determine more clearly the physical relationships that determine the evolution of early-type galaxies. Previous studies with smaller samples have explored the relationships between x-ray luminosity (L(sub x)) and luminosities in other bands. Using our larger sample and the statistical techniques of survival analysis, a number of these earlier analyses were repeated. For our full sample, a strong statistical correlation is found between L(sub X) and L(sub B) (the probability that the null hypothesis is upheld is P less than 10(exp -4) from a variety of rank correlation tests. Regressions with several algorithms yield consistent results. Derived from text

SEARCHING FOR LYMAN ALPHA EMISSION FROM A POSSIBLE ZEL'DOVICH PANCAKE
Caroline Cox, Eric Schulman, and Joel N. Bregman *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 106-107 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The detection of 2 x 10(exp 14) solar mass of neutral hydrogen at a redshift of 3.397 has been reported. Top-down theories of structure formation predict such a mass of hydrogen collapsing to form a protocluster of galaxies. We sought to observe this object in Lyman-alpha, which could be produced through ionization by the metagalactic ionizing radiation field or through internal ionization processes. On 29 Apr. 1992, the region of the reported HI emission for 1800 seconds with the 1.3 meter McGraw-Hill reflector at Michigan-Dartmouth-M.I.T. Observatory was observed. Because the H1 emission reported has a transverse scale of 300 sec, a 1/3.06 reducing camera and a Thomson CCD were used to obtain a field of view of about 600 sec by 840 sec. A filter 88 A wide, centered at 5354 A was used; Lyman-alpha emission at z = 3.4 is redshifted to 5347 A. In order to avoid saturating the CCD with a bright star in the field, nine 200 second exposures were taken. The combination of these images shows no obvious extended Lyman-alpha emission at a level of about 28 magnitudes per square arcsecond. The field observed also shows a distant cluster of galaxies. In order to determine if the cluster could in any way be associated with the cloud of neutral hydrogen at z = 3.4, we sought to estimate its redshift from the size and magnitude of the galaxies and of the cluster as a whole. Omega = 1 and H(sub O) = 50 km s(sup -1) Mpc(sup -1) were adopted; our redshift estimates range from z = 0.2 to z = 0.6. The cluster is clearly not associated with the HI cloud at z = 3.4.

CAN QUASARS PHOTOIONIZE THE INTERGALACTIC MEDIUM AT HIGH REDSHIFT?
Avery Meiksin and Piero Madau (Johns Hopkins Univ., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 108-109 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The reionization of the intergalactic medium (IGM) by quasar sources at high redshift are discussed. The integrated UV background from observed QSO's, taking into account the hydrogen opacity associated with intervening Ly-alpha clouds and Lyman limit systems are computed. It is noted that the published data appear to indicate a significant underdensity of absorption systems in the Ly-alpha forest with column densities N(sub HI) greater than 10(exp 15) cm(sup -2). This deficit results in a reduction of the opacity of the universe by a factor of 1.5-3 at z = 3-5 relative to previous estimates. The QSO contribution to the metagalactic flux at the Lyman edge may be as large as J(sub 912)(z) is approximately 6((1 + z)/4.5)(sup 0.5) x 10(exp -22) erg cm(sup -2) s(sup -1) Hz(sup -1) sr(sup -1) for q(sup o) = O, and slightly lower for q(sub o) = 1/2. For a density of the diffuse component of the IGM of omega(sub D)(h(sub 50)(sup 2)) less than 0.025, QSO's could photoionize a smooth IGM sufficiently to satisfy the constraints imposed by the Gunn-Peterson effect. The epoch of reionization could be as recent as z is approximately greater than 5. As a result, neutral patches of IGM would be detectable in the spectra of high redshift quasars. The patches would appear as absorption line systems with typical column densities of 10(exp 19) - 10(exp 20) cm(sup -2), and velocity widths of 100 - 1000 km s(sup -1). Author (revised)

METAL ABUNDANCES AT z = 3.4
Andrew Cooke *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 110 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Echelle spectroscopy data were taken of the quasar 0000-263 on the 4m telescope at CTIO in Chile. Three nights of red and three nights of blue data were obtained (about four hours data per night). The resolution is typically 0.4 A at 5000 A (lamda/d(lamda) = 12500) and has good signal-to-noise over the wavelength range 4600 A to 8000 A. To keep the

statistics manageable the data were not rebinned, although the instrument was stable enough for each night's data on the object to be co-added. Arc spectra taken between each exposure were also co-added within the nights. During profile fitting the model was convolved with a Gaussian whose width was equal to nearby arc lines, so any broadening generated by the co-adding of data will not affect the final results. Since OI and HI have the same ionization potential (13.6 eV), (O/H) is approximately (OI/HI). Unfortunately, in this data only the 1302 A OI transition is visible, and it is blended with HI in the Lyman Alpha forest. However, OI and NI coexist (the ionization potential for NI is 14.5 eV) and so the NI triplet can constrain the redshift and turbulent width of the OI. When a fit was made to the regions containing OI and NI absorption three systems were apparent with similar redshifts and velocity widths. These three systems were fitted with tied redshifts and turbulent widths, while the other lines in the region were fitted as Lyman-Alpha. The saturated Lyman-Alpha profile was then fitted with three components at the same redshifts as these observed lines, with the line widths tied. Finally, metallicity ratios for the individual lines and their totals were calculated and compared to solar values. The results for the separate clouds from low to high redshift and for the total are presented. Author (revised)

ENRICHMENT AND HEATING OF THE INTRACLUSTER MEDIUM BY EJECTION FROM GALAXIES
Chris Metzler and August Evrard *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 111-112 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Results of N-body + hydrodynamic simulations designed to model the formation and evolution of clusters of galaxies and intracluster gas are presented. Clusters of galaxies are the largest bound, relaxed objects in the universe. They are strong x-ray emitters; this radiation originates through thermal bremsstrahlung from a diffuse plasma filling the space between cluster galaxies, the intracluster medium or ICM. From observations, one can infer that the mass of the ICM is comparable to or greater than the mass of all the galaxies in the cluster, and that the ratio of mass in hot gas to mass in galaxies, M(sub ICM)/M(sub STARS), increases with the richness of the cluster. Spectroscopic studies of cluster x-ray emission show heavy element emission lines. While M(sub ICM)/M(sub STARS) is greater than or equal to 1 implies that most of the ICM is primordial in nature, the discovery of heavy elements indicates that some of the gas must have been processed through galaxies. Galaxy evolution thus directly impacts cluster evolution. Author (revised)

THE EVOLUTION OF THE INTERGALACTIC MEDIUM AND THE ORIGIN OF THE GALAXY LUMINOSITY FUNCTION Abstract Only
David Valls-Gabaud (Cambridge Univ., England.), Alain Blanchard (Observatoire de Paris-Meudon, France.), and Gary Mamon (Observatoire de Paris-Meudon, France.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 113 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The coupling of the Press and Schechter prescription with the CDM scenario and the Hoyle-Rees-Ostriker cooling criterion leads to a galaxy formation scenario in which galaxies are overproduced by a large factor. Although star formation might be suppressed in the smaller halos, a large amount of energy per galactic mass is needed to account for the present number density of galaxies. The evolution of the intergalactic medium (IGM) provides a simple criterion to prevent galaxy formation without requiring feedback, since halos with small virial temperatures are not able to retain the infalling hot gas of the IGM. If the ionizing background has decreased since z is approximately 1 - 2, then this criterion explains the slope of the luminosity function at the faint end. In addition, this scenario predicts two populations of dwarf galaxies, well differentiated in age, gas content, stellar populations, and clustering properties, which can be identified with dE and dIm galaxies. EVIDENCE FOR A MULTIPHASE, INHOMOGENEOUS INTERSTELLAR MEDIUM IN DAMPED Ly ALPHA SYSTEMS Abstract Only
David Valls-Gabaud (Cambridge Univ., England.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 114 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The large optical depth in absorption of the Ly-alpha line in damped Ly-alpha systems implies that the emission line produced by H2 regions is very broad, since the number of diffusions is very large. The emission lines observed in DLy-alpha systems are narrow, a fact that can only be explained if the emission comes from the outer layers alone, or if the interstellar medium (ISM) is clumpy and multiphase. It is shown how discrete, cold H1 clouds embedded in a hot, fully ionized phase, produce narrow lines. This might provide evidence for a supernova remnant SNR-dominated ISM at high redshift, in agreement with the observed metallicity and chemical evolution models. Other high redshift galaxies also offer evidence for such a multiphase, in homogeneous ISM. Author (revised)

HST/FOS SPECTRA OF PG 1351+64: AN INTRINSIC ABSORBER AT LOW REDSHIFT
Arno Granados, Elise Sachs, J. Michael Shull, and John T. Stocke *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 115-116 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A 1 A resolution spectra of the nearby (z = 0.08797) Seyfert galaxy PG 1351+64 taken with the Faint Object Spectrograph (FOS) onboard the Hubble Space Telescope is presented. Spectral coverage runs from 1200-3200 A in the observed frame and includes emission and absorption features due to Ly-alpha, N 5, Si 4, C 4, and Mg 2. Three distinct intrinsic absorption systems in Ly-alpha, N 5, Si 4, and C 4, and tentatively in Mg 2, at velocities of 900 km/s, 1630 km/s, and 2900 km/s (plus or minus 100 km/s) relative to the emission-line redshift of the QSO were detected. The maximum relative velocity of these absorbers is less than 5000 km/s and therefore does not meet Weymann, Carswell, & Smith's criteria for Broad-Absorption-Line (BAL) QSO's at high-z. However, the absorptions are almost certainly intrinsic to the QSO given the low redshift of this object. In addition, PG 1351+64 is marginally radio-quiet, as are all BALQSO's, based on recent estimates of the radio-loud/radio-quiet dividing line. The narrow velocity width, less than 500 km/s, and low outflow velocities of the absorption systems are more similar to so called 'associated absorbers' seen at high-z in radio-loud quasars, but whose absorptions are thought to arise in clouds much farther from the nucleus (greater than 1 kpc) than are BAL clouds (1-10 pc). Despite the qualitative resemblance to the associated absorbers, the absorption systems in PG 1351+64 appear to be the low-luminosity analogs of BALQSO absorption troughs. The lower observed outflow velocities in PG 1351+64 are due to the much lower luminosity of the nuclear source in comparison to the high-z, high-luminosity BALQSO's. In addition, 'satellite' emission lines displaced 4000-5000 km/s blueward and redward of the Mg 2 emission were discovered.

LOW REDSHIFT LYMAN ALPHA ABSORPTION LINES AND THE DARK MATTER HALOS OF DISK GALAXIES
Philip Maloney *In its* The Evolution of Galaxies and Their Environment Jan. 1993 p 117-118 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Recent observations using the Hubble Space Telescope of the z = 0.156 QSO 3C 273 have discovered a surprisingly large number of Ly-alpha absorption lines. In particular, Morris et al. found 9 certain and 7 possible Ly-alpha lines with equivalent widths above 25 mA. This is much larger (by a factor of 5-10) than the number expected from extrapolation of the high-redshift behavior of the Ly-alpha forest. Within the context of pressure-confined models for the Ly-alpha clouds, this behavior can be understood if the ionizing background declines sharply between z is approximately 2 and z is approximately 0. However, this requires that the ionizing photon flux drop as rapidly as the QSO volume emissivity; moreover, the absorbers must have a space density n(sub O) is approximately 2.6(N/10)h/((D/100 kpc)(sup 2)) Mpc(sup -3) where D is the present-day diameter of the absorbers. It is somewhat surprising that such necessarily fragile objects could have survived in such numbers to the present day. It

is shown that it is plausible that the atomic hydrogen extents of spiral and irregular galaxies are large enough to produce the observed number of Ly-alpha absorption lines toward 3C 273, and that the neutral column densities and doppler b-values expected under these conditions fall in the range found by Morris et al. (1991). Author (revised)

Damped Lyman-alpha and metal absorption lines in the spectra of quasars indicate the presence of intervening gas-rich systems at high redshift (z greater than 2). These systems have characteristic size scales, velocity dispersions, and neutral hydrogen column densities (N(H1)) similar to present day spirals and are thus thought to be their progenitors. Constraints on galaxy evolution can be derived by comparing the H1 properties of high redshift systems to the present galaxy population. Good observational statistics on high redshift absorbers specify the number of these systems along the line of sight as a function of N(H1), the column density of neutral hydrogen per absorber. Similar statistics for nearby (z = 0) galaxies of which spirals are the only gas-rich systems that provide a significant cross-section for the interception of light from quasars is derived.

TESTING THE PRESSURE-CONFINED Ly ALPHA CLOUD MODEL
Arif Babul and Gerard M. Williger (Cerro Tololo Inter-American Observatory, La Serena, Chile.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 121-122 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The Ly-alpha absorption line forest, seen in quasar spectra, is generally interpreted as being due to cosmologically distributed 'clouds' of primordial gas. Analyses of the observations reveal that the number distribution can be described by power laws: dN/dz is proportional to (1 + z)(sup gamma) and dN/dN(sub HI) is proportional to N(sub HI)(sup -beyda), where N(sub HI) is the HI column density. The typical values for power law indices range between 2 is approximately less than gamma is approximately less than 2.6 and 1.7 is approximately less than gamma is approximately less than 1.9. One model postulates that the Ly-alpha clouds are optically thin entities, photoionized by the background UV flux, J(sub nu) is proportional to (1 + z)(sup j), and confined by an adiabatically evolving intercloud medium (ICM): P(z) is proportional to (1 + z)(sup 5). Analytic studies of this model suggest that the ensuing Ly-alpha line statistics can account for the observations (in particular, the dN/dz and the dN/dN(sub HI) distributions) if the cloud mass spectrum is a power law dN/dN is proportional to M(sup -delta), delta is approximately 1.9, and j is approximately 4. One of the simplifying assumptions incorporated into these studies is the existence of a large mass range for the clouds at all epochs, the validity of which is questionable. The pressure-confined model is investigated using a 1-D spherically symmetric hydrodynamical code to simulate cloud evolution over the epoch 1.8 less than z less than 6. This enables us to relax many of the assumptions incorporated in the analytic studies. Author (revised)

ON THE EVOLUTION OF LYMAN ALPHA CLOUDS BASED UPON THE MINIHALO MODEL
Izumi Murakami and Satoru Ikeuchi *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 123-124 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Intergalactic clouds confined by the gravity of cold dark matter (CDM), the so called mini-halo, is considered. Assuming a simplified evolution law of UV flux and mass function of gas clouds, number density evolution and H1 column density distribution can be reproduced by mini-halo model. Considering interaction between supersonic flow and a mini-halo, spatial correlation and the proximity effect of Ly-alpha forest can be investigated.

PROBING THE EXTENT AND CONTENT OF LOW IONIZATION GAS IN GALAXIES: QSO ABSORPTION AND HI EMISSION
Donna S. Womble *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 125-126 (For primary document see N93-26706 10-90)
(Contract NAS5-29293; NAG5-1630)
Avail: CASI HC A01/MF A04

The small projected separations of some QSO's and low-redshift galaxies provide unique opportunities to study the extent and content of gas in galaxies through observation of absorption in the QSO spectra. Observations of these systems provide valuable information on the connection between the absorbing gas and the galaxy, as well as detailed information on the morphology and environment of the galaxy itself. While there is direct evidence that galaxies can produce the intervening-type QSO absorption lines, over the past decade, the study of such 'QSO-galaxy pairs' (at low redshift) has been considered unsuccessful because new detections of absorption were seldom made. A fundamental problem concerning the relation between these low-redshift systems and those seen at moderate to high redshift remains unresolved. Direct and indirect measures of galaxy absorption cross sections at moderate to high redshifts (z is approximately greater than 20.5) are much larger than the optical and HI sizes of local galaxies. However, direct comparison of the low and moderate to high redshift systems is difficult since different ions are observed in different redshift regimes. Observations are presented for a new sample of QSO-galaxy pairs. Nine new QSO's which shine through nearby galaxies (on the sky-plane) were observed to search for CaII absorption in the QSO spectra at the foreground galaxy redshifts. Derived from text

THE TWO-POINT CORRELATION FUNCTION OF RANDOMLY DISTRIBUTED LYMAN ALPHA CLOUDS
Mark A. Fardal and J. Michael Shull *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 127-128 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

It is often assumed that Ly-alpha forest clouds are randomly distributed, intergalactic objects that are highly ionized by the UV background produced by quasars. If these assumptions are true, fluctuations in the UV background should produce a nonzero two point correlation function in the Ly-alpha forest. This effect, which is really just a generalization of the proximity effect, is more significant at high redshift (z is approximately 3-4) because the mean free path for UV photons is smaller there, and the fluctuations correspondingly larger. This effect was studied using both the semi-analytic techniques of Zuo's recent papers and Monte Carlo simulations. The correlation function is expected to have a small yet potentially measurable amplitude that is consistent with current upper limits. Furthermore, the signature of this effect is distinctive because the nonzero correlation function extends over the photon mean free path, which is larger than the expected scale of large-scale structure. Observations or upper limits on this effect could provide information about the source of the ionizing background at high redshifts and the nature of the Ly-alpha forest clouds.

CONSTRAINTS ON CHEMICAL EVOLUTION MODELS FROM QSOALS ABUNDANCES
J. T. Lauroesch *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 131-132 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Models of the formation and early chemical evolution of our Galaxy are guided and constrained by our knowledge of abundances in globular cluster stars and halo field stars. The abundance patterns identified in halo and disk stars should be discernible in absorption lines of gas clouds in forming galaxies which are accidentally lying in front of background QSO's. Conversely, the ensemble of QSO absorption line systems (QSOALS) at each redshift may suggest a detailed model for the formation of our Galaxy that is testable using abundance patterns in halo stars. INTERSTELLAR Mg II AND C IV ABSORPTION BY 1 1/2 GALAXIES ALONG THE SIGHTLINE TO MrK 205
David V. Bowen and J. Chris Blades *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 133-134 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The first results of our HST survey designed to search for Mg 2 and C 4 absorption lines from the disks and halos of low-redshift galaxies using background QSO's and supernovae as probes are presented. Our survey utilizes the high resolution of the Goddard High Resolution Spectrograph enabling us to calculate the column densities and doppler parameters of individual components within an absorption complex, and hence determine the physical conditions of the absorbing gas. Observing the complexity of the absorption line profiles i.e., the velocity distribution and total velocity extent of the constituent components, offers an important description of the kinematics of the absorbing gas, and hence an understanding of its origin. Focus is on one sight line in particular, that towards Mrk 205, which passes 3-5 kpc from the intervening galaxy NGC 4319. Mg 2 and C 4 absorption from both local Milky Way halo gas and from NGC 4319 is detected. Derived from text

THE REIONIZATION OF THE UNIVERSE: THE FEEDBACK OF GALAXY FORMATION ON THE INTERGALACTIC MEDIUM
Paul R. Shapiro and Mark L. Giroux *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 136 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The thermal and ionization evolution of a uniform intergalactic medium (IGM) composed of H and He, undergoing reionization, including the mean effect of gas clumps embedded in a smoothly distributed ambient gas were calculated. The rate equations for ionization and recombination were solved together with the equations of energy conservation, including the effects of cosmological expansion, radiative and Compton cooling, and the diffuse flux emitted by the gas, and radiative transfer. The contribution to the continuum opacity of the universe due to the observed quasar absorption line clouds (QALC'S) were included. A variety of sources of photoionization, including quasars and primeval galaxies, as well as the possibility that hydrodynamical processes deposit thermal energy in the IGM were considered. Applications of these calculations including the evolution of the Ly-alpha forest clouds are described. A self-consistent treatment of the thermal and ionization history of the intergalactic medium (IGM) must take account of the growth of structure in the universe, since the mean density of the IGM corresponds primarily to the time-varying uncollapsed fraction of the baryon-electron component of the matter, and the collapsed fraction, in turn, can have a feedback effect on this uncollapsed fraction by releasing ionizing radiation and thermal energy and by contributing to the opacity of the universe. The coupled evolution of the IGM and the emerging structure with a special focus on the reionization of the IGM, which is believed to have been completed by some redshift z is approximately greater than 4, as inferred from the absence of the Gunn-Peterson effect in the spectra of high z quasars, are studied. The results and implications of detailed, numerical calculations of the thermal and ionization balance and radiative transfer in a uniform IGM of H and He, including the mean effect of an evolving distribution of gas clumps embedded in a smoothly distributed ambient gas is described. PRUNING THE LYMAN ALPHA FOREST OF Q1331+170
Varsha P. Kulkarni and Donald G. York *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 141-142 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A multitude of absorption lines seen shortward of QSO Ly-alpha emission, that cannot be traced to heavy element absorption systems, are assumed to be Ly-alpha lines arising in intervening clouds. Studies of these Ly-alpha clouds, typically done at 1 A or lower resolution, have shown N(H1) approximately equal to 10(exp 13) - 10(exp 17) sq cm and b approximately equal to 35 km/s. Sargent et al 1980, on the basis of a flat pair velocity correlation function (PVCF), argued that these clouds are intergalactic. But Crotts 1989 showed that the strong Ly-alpha lines are spatially clustered. High resolution studies of Webb 1987 and Rauch et al 1992 also report some evidence for weak clustering, but overall such high resolution studies have been rare. A study of the Ly-alpha forest of Q1331 + 170 over x(sub abs) = 1.60 - 2.19 based on 18 km/s resolution data at S/N approximately equal to 15, with metal-line deblending incorporated. Recently Pettini, Hunstead, Smith and Mar, (PHSM 1991) performed an analysis of the Ly-alpha forest of QSO 2206-199N at very high resolution. On the basis of their observations they concluded that most Doppler parameters b = (square root of 2)(sigma) of Ly-alpha forest lines are below 22 km/s, with a range down to a few km/s and a median of 17 km/s. They also found a strong intrinsic correlation between Doppler parameter b and column density N. These results are in contrast to those of a similar study by Carswell, Lanzetta, Parnell, and Webb (CLPW 1991) at comparable resolution with the same instruments, who find that most of

the Ly-alpha lines towards QSO 1100-264 have Doppler parameters above 15 km/s (median b = 34 km/s), and that there is no significant correlation between b and N. Whilst an intrinsic difference between the lines of sight to 2206-199 and to other QSO's can not be excluded a priori, previous disagreement between Doppler parameter estimates obtained by both groups pointed to a potential difference in estimation techniques and in the interpretation of the results. To investigate this possibility, the AAT/UCLES spectrum of 2206-199 obtained by PHSM were reanalyzed. The spectrum was extracted from the raw data and determined the line parameters using the method described by CLPW. Derived from text

IRAS STUDIES OF GALACTIC SUPERSHELLS

Jon M. Saken, J. Michael Shull, and Robert A. Fesen (Dartmouth Coll., Hanover, NH.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 145-146 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Using IRAS Skyflux images and a new catalog of OB stars in the Cygnus region, a complete infrared supershell surrounding the Cyg OB1 Association was identified. This supershell is seen as a conspicuous, well-defined 2 deg x 5 deg region deficient of IR emission, with a limb-brightened edge and dimensions of about 50 x 130 pc at 1.5 kpc. The shell's elongated morphology is consistent with OB-star subclustering over the approximately 10(exp 6) yr age of the bubble. With a parent star cluster still visible (10 O stars between 25 and 45 solar mass, 3 - 4 Wolf-Rayet stars, and the possibility of 3 - 5 more massive stars that died as supernovae) the Cyg OB1 supershell is an excellent object for studying the formation and evolution of Galactic supershells. A discrepancy between the less than or equal to 1 Myr bubble age estimated from its size and the 5 Myr cluster turnoff age (45 solar mass) may require non-coeval massive star formation to explain the number of post-main-sequence stars and limit the number of past supernovae. STARBURST AGES IN HII GALAXIES

Hans-Joerg Deeg (National Radio Astronomy Observatory, Socorro, NM.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 147-148 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

The age of the starbursts of a few H2 galaxies is derived from optical photometry and compared with previous results from radio continuum spectra. H2 galaxies are gas rich and characterized by the dominance of giant H2 regions, blue stellar colors, high surface brightness, and narrow emission lines. The presently observed high abundances of bright young stars must be the result of a recent -or even ongoing- starburst. The question, whether the observed starburst is the first one or if it is a recurrent phenomenon, is still open. If the starburst is the first one, H2 galaxies can be interpreted as being among the most unevolved galaxies known - their star formation characteristics possibly paralleling that of normal galaxies early in their evolution. A sample of five H2 galaxies was observed with B, R, and I broadband filters. They have been observed previously at several radio continuum frequencies. The photometric data are given. The results of the photometry and a comparison with radio continuum spectra are given. Derived from text

STARBURST MODELS OF MERGING GALAXIES

Andrea H. Prestwich *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 149-150 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

In the past decade, infrared observations have shown that interacting and merging galaxies have higher luminosities than isolated systems, with the luminosities in mergers as high as 10(exp 12) solar luminosity. However, the origin of the luminosity found in mergers is controversial, with two main competing theories. The first is the starburst scenario. As two gas rich galaxies start to merge, cloud-cloud collisions induce fast shocks in the molecular gas. This gas cools, collapses, and fragments, producing a blast of star formation. The main rival to this theory is that the infrared luminosity is produced by a dust embedded active nucleus, the merger of two gas rich galaxies providing the 'fuel to feed the monster'. There has even been speculation that there is an evolutionary link between starbursts and active nuclei, and that possibly active galactic nuclei (AGN's) and QSO's were formed from a starburst. Assuming that the infrared luminosity in merging galaxies is due to star formation, there should be ionizing photons produced from the high mass stars, giving rise to recombination line emission. The objective is to use a simple starburst model to test the hypothesis that the extreme infrared luminosity of merging galaxies is due to a starburst. Author (revised)

THE EFFECT OF MASSIVE STARS ON THE IONIZED MEDIUM OF EXTRAGALACTIC HII REGIONS

Hector O. Castaneda (Roque de los Muchachos Observatory, La Laguna, Spain.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 151-152 Sponsored in part by CICYT (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Giant extragalactic H2 regions (GEHR) are centers of active star formation, ionized by populous clusters of OB stars. These objects are characterized by their low electron density, linear dimensions of order of 10(exp 2) - 10(exp 3) pc, varied morphology, and inhomogeneous distribution of the gas. They are ideal laboratories to study the processes of interaction between the gas and the stars, that could then be extended to the study of H2 and starburst galaxies. An observational program on a selected group of giant H2 regions with the use of one- and two-dimensional spectroscopy is being conducted. Our aim is two-fold: to understand the internal structure of the regions and to study the kinematics and dynamics of the ionized gas. A short report of our ongoing research is presented. GAS DISTRIBUTION AND STARBURSTS IN SHELL GALAXIES

Melinda L. Weil and Lars Hernquist *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 153-154 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Detailed maps of most elliptical galaxies reveal that, whereas the greatest part of their luminous mass originates from a smooth distribution with a surface brightness approximated by a de Vaucouleurs law, a small percentage of their light is contributed by low surface brightness distortions termed 'fine structures'. The sharp-edged features called 'shells' are successfully reproduced by merger and infall models involving accretion from less massive companions. In this context, dwarf spheroidal and compact disk galaxies are likely progenitors of these stellar phenomena. However, it is probable that the sources of shell-forming material also contain significant amounts of gas. This component may play an important role in constraining the formation and evolution of shell galaxies. To investigate the effects of the gaseous component, numerical simulations were performed to study the tidal disruption of dwarf galaxies containing both gas and stars by more massive primaries, and the evolution of the ensuing debris. The calculations were performed with a hybrid N-body/hydrodynamics code. Collisionless matter is evolved using a conventional N-body technique and gas is treated using smoothed particle hydrodynamics in which self-gravitating fluid elements are represented as particles evolving according to Lagrangian hydrodynamic equations. An isothermal equation of state is employed so the gas remains at a temperature 104 K. Owing to the large mass ratio between the primary and companion, the primary is modeled as a rigid potential and the self-gravity of both galaxies is neglected. Derived from text

STARBURSTS TRIGGERED BY CENTRAL OVERPRESSURE IN INTERACTING GALAXIES

Chanda J. Jog and Mousumi Das *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 155-156 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

A triggering mechanism for the origin of enhanced, massive-star formation in the central regions of interacting spiral galaxy pairs is proposed. Our mechanism is based on the detailed evolution of a realistic interstellar medium in a galaxy following an encounter. As a disk giant molecular cloud (GMC) tumbles into the central region following a galaxy encounter, it undergoes a radiative shock compression via the pre-existing high pressure of the central intercloud medium. The shocked outer shell of a GMC becomes gravitationally unstable and begins to fragment thus resulting in a burst of star formation, when the growth time for the gravitational instabilities in the shell becomes smaller than the crossing time of the shock. The resulting values of typical infrared luminosity agree with observations. Author (revised)

FEEDING IC 342: THE NUCLEAR SPIRAL OF A STARBURST GALAXY
D. Levine, J. L. Turner, and Robert L. Hurt *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 157-158 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

IC 342 is a large nearby (1.8 Mpc, Turner and Hurt, 1991, hereafter T&H) spiral galaxy undergoing a moderate nuclear starburst. T&H have previously mapped the inner arcminute in CO-13(1-0) using the Owens Valley Millimeter Interferometer and found evidence that the nuclear molecular gas takes the form of spiral arms in a density wave pattern. They suggest that radial streaming along the arms may channel gas from the exterior of the galaxy into the nucleus, feeding the starburst. We have mapped the CO-12(1-0) emission of the inner 2 kpc of IC 342 at 2.8 inch resolution using the Owens Valley Radio Observatory (OVRO) Millimeter Interferometer. The greater sensitivity of CO-12 observations has allowed us to trace the spiral pattern out to a total extent of greater than 1 kpc. The CO-12 observations extend considerably the structure observed at CO-13 and offer further evidence that a spiral density wave may extend from the disk into the nucleus of IC 342. Author

Avail: CASI HC A01/MF A04

Over the past several years, short-submillimeter observations of carbon monoxide's (CO) mid-J rotational levels have revealed the presence of a large amount of excited molecular gas in luminous giant molecular clouds in our Galaxy. Submillimeter lines are specific probes of excited material: collisional excitation of the level energy of 116 K above ground, and 6-5 transition's critical density is approximately 10(exp 6) cm(exp -3) in optically thin gas. Radiative trapping effects reduce the excitation requirements to some extent, but detection of the CO J=6-5 line is nearly indisputable proof of the existence of gas that is both warm and dense. The excitation conditions also imply that cool (T less than 20 K) molecular clouds within the beam neither emit nor absorb in the short-submillimeter lines; in our Galaxy, clouds with active massive star formation emit the strongest short-submillimeter CO rotational lines. We used these properties to explore the distribution of excited molecular material and physical conditions within the star formation regions of several classical starburst nuclei: NGC253, M82, and IC342. We have used the 6-5 transition as a thermometer of warm molecular gas in starburst nuclei, unambiguously finding that the nuclear molecular gas in starburst galaxies is substantially warmer than in typical disk clouds. THE LYMAN ALPHA EMISSION OF STARBURST GALAXIES Abstract Only
David Valls-Gabaud (Cambridge Univ., England.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 161 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Nearby starburst galaxies have consistently shown anomalous Ly-alpha/H-beta ratios. It has been suggested that dust, associated with resonant scattering, quenches the Ly-alpha line by a large factor. However, the observed amount of dust can barely account for the large depletion factors. It is proposed here that a much more important effect is the age of the burst. Normal (i.e., case B recombination) ratios are observed if the galaxy is currently undergoing the burst, while anomalous ratios appear when the galaxy is observed in the post-burst phase. Underlying stellar populations in the UV spectra should therefore be older in the latter case. This scenario explains the presence of Ly-alpha in absorption. Implications for deep surveys are also discussed. Author

Ultraviolet images of several galaxies were obtained during the ASTRO-1 shuttle mission in December, 1990. The images have a FWHM angular resolution of approximately 3 arcsecond and are of circular fields approximately 40 arcminutes in diameter. Most galaxies were observed in at least two and sometimes as many as four broad bands. A very few fields were observed with narrower band filters. The most basic result of these observations is that most systems look dramatically different in the UV from their well-known optical appearances. Preliminary results of these studies will be presented. Information will be available on fields observed by the UTI during the ASTRO 1 mission; when that data becomes public it can be obtained from the NSSDC. The ASTRO observatory is expected to fly again in 1994 with approximately half of the observing time from that mission devoted to guest observers. The Ultraviolet Imaging telescope is extremely well suited for galaxy studies, and the UIT term is interested in encouraging a wide range of scientific studies by guest observers. Ultraviolet Imaging telescope is extremely well suited for galaxy studies, and the UIT team is interested in encouraging a wide range of scientific studies by guest observers. Derived from text

EVOLUTION OF LUMINOUS IRAS GALAXIES: RADIO IMAGING
S. G. Neff and J. B. Hutchings (Dominion Astrophysical Observatory, Victoria, British Columbia.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 163 Submitted for publication (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

In a recent study of IRAS galaxies' optical morphologies, we found that luminous IR sources lie in the IR color-luminosity plane in groups which separate out by optical spectroscopic type and also by degree of tidal disturbance. We found that the most luminous steep-IR-spectrum sources are generally galaxies in the initial stages of a major tidal interaction. Galaxies with active nuclei were generally found to have flatter IR spectra, to cover a range of IR luminosity, and to be in the later stages of a tidal interaction. We proposed a sequence of events by which luminous IR sources evolve: they start as interacting or merging galaxies, some develop active nuclei, and most undergo extensive star-formation in their central regions. Another way to study these objects and their individual evolution is to study their radio morphologies. Radio emission may arise at a detectable level from supernovae in star-forming regions and/or the appearance of an active nucleus can be accompanied by a nuclear radio source (which may develop extended structure). Therefore, the compact radio structure may trace the evolution of the inner regions of IRAS-luminous sources. If the radio sources are triggered by the interactions, we would expect to find the radio morphology related to the optical 'interactivity' of the systems. Here, we explore using the radio emission of IRAS galaxies as a possible tracer of galaxy evolution. We present and discuss observations of the compact radio morphology of 111 luminous IRAS-selected active galaxies covering a wide range of IR and optical properties. Author

OB ASSOCIATIONS AND GIANT MOLECULAR CLOUDS IN THE GALAXY
Jonathan Williams and Chris McKee *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 167 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Giant molecular clouds (GMC's) are the sites of all OB star formation in the Galaxy. These OB stars typically form in large associations and photoionize the surrounding gas, eventually destroying the clouds from which they were born. CO surveys have revealed the distribution of GMC's in the Galaxy, and radio observations provide data on the distribution of associations. These results are extrapolated to determine Galactic mean distribution functions of each and then combined to determine how GMC's and OB associations are correlated. The resulting probability distribution of luminosity given cloud mass implies that although most of the molecular mass of the Galaxy is in massive star forming complexes, a large number of clouds above which massive star formation is extremely likely and abundant and below which it is almost certainly absent. STAR-DUST GEOMETRIES IN GALAXIES: THE EFFECT OF INTERSTELLAR MATTER DISTRIBUTIONS ON OPTICAL AND INFRARED PROPERTIES OF LATE-TYPE GALAXIES
J. M. Capuano, Jr., H. A. Thronson, Jr. (Wyoming Univ., Laramie.), and A. N. Witt *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 168-169 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The presence of substantial amounts of interstellar dust in late-type galaxies affects observable parameters such as the optical surface brightness, the color, and the ratio of far-infrared to optical luminosity of these galaxies. We conducted radiative transfer calculations for late-type galaxy environments to examine two different scenarios: (1) the effects of increasing amounts of dust in two fixed geometries with different star distributions; and (2) the effects of an evolving dust-star geometry in which the total amount of dust is held constant, for three different star distributions. The calculations were done for ten photometric bands, ranging from the far-ultraviolet to the near-infrared (K), and scattered light was included in the galactic surface brightness at each wavelength. The energy absorbed throughout these ten photometric bands was assumed to re-emerge in the far-infrared as thermal dust emission. We also considered the evolutionary contraction of a constant amount of dust relative to pre-existing star distributions. Derived from text

THE ENVIRONMENTS OF SEYFERT AND MARKARIAN GALAXIES
John W. MacKenty and Brian McLean *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 170-171 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The environments of galaxies may affect both the presence and nature of the activity in their nuclei. We have undertaken a study of the environments of Seyfert and non-Seyfert Markarian galaxies to investigate the relationship between nuclear activity and external influences on the nucleus (MacKenty 1989; MacKenty, McLean, and Simpson 1990). Previous studies of the environments of Seyfert galaxies suggest a connection between the nature of the activity in the nuclear regions of the galaxy and its external environment. Petrosian (1982) finds Seyfert 2 galaxies to be located in regions of higher density than Seyfert 1 galaxies and Dahari (1984, 1985) finds an excess of close companions to Seyfert galaxies compared to field galaxies. In a study of 102 Markarian galaxies, MacKenty (1989) confirms these results yet finds that non-Seyfert Markarian galaxies have the same frequency of companion galaxies as Seyfert Markarian galaxies and concludes from their IRAS colors that the companion galaxies tend to enhance star formation rather than directly influence the nuclear activity. Accurate spectral indices of the radio emission from both the thin disk and thick disk or halo components are critical to understanding the propagation mechanisms of electrons within spiral galaxies. The spectral indices give information of relative importance of diffusion and synchrotron energy loss in the propagation of electrons in the disk. Our goal of this survey is to locate a larger sample of spiral galaxies that exhibit halo phenomena so that a statistical analysis will be possible. Author

There is ample observational evidence that cluster galaxies are different from those in the field. Interaction with the hot intracluster medium affects the morphology of the galaxies, their gaseous content and possibly their star-formation activity. Tidal encounters between galaxies also play an important role. The atomic component has been investigated in detail for several clusters, among them our neighbor Virgo. With the Swedish-ESO 15 m telescope, we have observed in the 12CO(1-0) transition the 23 brightest spirals and lenticulars of the Formax cluster. Derived from text

The classification S0 was introduced by Hubble to serve as a description of galaxies whose morphological characteristics seemed to lie between the disk-dominated spirals and the spheroidal elliptical systems. Since then there has been extensive discussion as to whether this classification sequence is also an evolutionary sequence. Many studies have focussed on a particular feature such as the luminosity profile, the bulge-to-disk ratio, or the nature of the interstellar matter, but the question of the evolution remains contentious. Equally contentious is the question of the classification itself. For systems with well-developed disks there usually is no problem. Many spheroidal systems also are unambiguously classified as ellipticals in most catalogs. However, there are a number of early systems which have been reclassified following review using improved optical material. For example, Eder et al. (AJ, 102, 572, 1991) found that many of the S0 galaxies which are rich in neutral hydrogen have faint spiral features. The confusion about classification propagates into the discussion of the

properties of early-type systems. Attempts to put the classification system on a quantitative basis have in general been unsuccessful. Recently Sandage (private communication) has reviewed the classification of early systems and has defined a set of sub-classes for these objects. The S0 galaxies are divided into three groups, depending on the prominence of the disk. There are six subdivisions of Sa galaxies, depending upon the relative prominence of knots and other arm-like characteristics. We have explored the total gas content in these objects to see if there is a dependence on the galaxy morphology, as denoted by these new subclasses.

Here we report our preliminary findings from an HI search for dwarf galaxies in three environmentally distinct regions of the sky: a galactic void, a galactic cluster, and an interaction field. This study is sensitive at the 5(sigma) level to hydrogen masses as low as 5 x 10(exp 5) solar mass. We have made three possible detections of previously uncatalogued objects: one in the void field, and two in the cluster field. Reduction of the interaction field is in progress. Author

Dwarf irregular galaxies (generically labelled Im for the present purposes) pose an enigma to students of galaxy evolution. In nearby groups and the Virgo cluster, Im galaxies are at least as abundant as spiral galaxies, and their low surface brightnesses and high gas-to-stars ratios suggest that (at least in the stochastic self-propagating star formation scenario) there should be significant numbers of HI clouds with masses approaching 10(exp 8) solar mass which have undergone very little or no star formation. To date, however, no clouds with so little star formation that they would not be recognized as Im galaxies on high-quality photographic plates have been identified. There have been suggestions that such dwarfs may be tidally disrupted in regions of high galactic density, but may be prevalent in low density regions. We offer data from three parallel programs relevant to this issue. (1) A large number of Im galaxies throughout the Local Supercluster have been mapped in the HI spectral line using the Arecibo Radiotelescope, and we can establish the frequency with which HI disks much more extended than their optically visible portions are found. (2) Our extensive mapping of spiral and dwarf galaxies in the Virgo cluster allows us to set stringent limits on the density of star-free Hi clouds in that cluster. (3) We have conducted a sampling of the void in the distribution of galaxies toward the super galactic pole, optimized for finding low-mass HI clouds at redshifts out to approximately 2000 km/s. Townes (California Univ., Berkeley.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 185-186 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Using the MPE/UCB Far-infrared Imaging Fabry-Perot Interferometer (FIFI) on the Kuiper Airborne Observatory (KAO), we have made large scale maps of (CII) in the spiral galaxies NGC 6946, NGC 891, M83 and the peculiar elliptical Cen A, thus allowing for the first time, detailed studies of the spatial distribution of the FIR line emission in external galaxies. We find that the (CII) emission comes from a mixture of components of interstellar gas. The brightest emission is associated with the nuclear regions, a second component traces the spiral arms as seen in the nearly face on spiral galaxies NGC 6946 and M83 and the largest star forming/H2 regions contained within them, and another extended component of low brightness can be detected in all of the galaxies far from the nucleus, beyond the extent of CO emission. Avail: CASI HC A01/MF A04

Irregular dwarf galaxies are about ten times more widespread in the universe than regular spiral galaxies. They are characterized by a relatively low metallicity, i.e., lower abundance of the heavier elements (metals) with respect to hydrogen than in the solar neighborhood. These heavier elements in the form of molecules, atoms, or ions, which have radiative transitions in the infrared play a decisive role in the energy balance of the ISM and thereby for the formation of stars. Dwarf galaxies are thus model cases for the physical conditions in the early phase of the universe. Large Magellanic Cloud: 30 Doradus. The two nearest dwarf galaxies are the Magellanic clouds at a distance approximately 50 kpc. The LMC contains 30 Dor, a region with young, extremely massive stars which strongly interact with the surrounding ISM on account of their stellar winds and intense UV radiation. 30 Dor is the brightest object in the LMC at almost all wavelengths. DUST AND IONIZED GAS IN ELLIPTICAL GALAXIES: SIGNATURES OF MERGING COLLISIONS

Paul Goudfrooij and Teije deJong *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 191-192 Sponsored in part by Shell Nederland BV (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Traditionally elliptical galaxies were thought to be essentially devoid of interstellar matter. However, recent advances in instrumental sensitivity have caused a renaissance of interest in dust and gas in - or associated with - elliptical galaxies. In particular, the technique of co-adding IRAS survey scans has led to the detection of more than half of all ellipticals with BT less than 11 mag. in the Revised Shapley-Ames catalog, indicating the presence of 10(exp 7) - 10(exp 8) solar mass of cold interstellar matter (Jura et al. 1987). In addition, CCD multi-color surface photometry shows dust patches in about 30 percent of the cases studied to date (e.g., Veron-Cetty & Veron 1988). Thorough study of the gas and dust in ellipticals is important to (1) determine its origin (mass-loss from late-type stars, merging collisions with other galaxies or accretion inflows from cooling X-ray gas), and (2) investigate the 3-D shape of ellipticals, as can be

derived from the orientation of the dust lanes and the 2-D velocity field of the gas. An important result of our comprehensive CCD imaging program is that a relevant fraction (approximately 40 percent) of the sample objects exhibits dust patches within extended H-alpha+(NII) line-emitting filaments. This common occurrence can be easily accounted for if the dust and gas have an external origin, i.e., mergers or interactions with gas-rich galaxies. Evidence supporting this suggestion: (1) the ionized gas is usually dynamically decoupled from the stellar velocity field (see, e.g., Sharples et al. 1983, Bertola & Bettoni 1988); (2) it is shown in a companion paper (Goudfrooij et al. 1992) that internal stellar mass loss alone can not account for the dust content of elliptical galaxies. The morphology of disk galaxies is usually described by two major components, the centrally concentrated spheroidal component, called the bulge, and an oblate disk. The ratio of there contribution to the total luminosity - the bulge-to-disk ratio - is one of the parameters characterizing the Hubble sequence. Following de Vaucouleurs (1948), for most galaxies the radial distribution of the outer spheroid is fairly well described by the r exp 1/4 law I(r)=I(sub 0) exp(-(alpha)r), whereas the radial luminosity distribution of the disk follows an exponential law: I(r)=I(sub 0) exp(-alpha(r exp 1/4)) (Freeman 1970), with r the radial distance from the center. I(sub 0) and alpha are characteristic constants for each individual galaxy. Parameters for the structural properties of these components give important constraints for models of the formation and evolution of galaxies. Therefore we have tried to decompose disk and bulge components from high S/N CCD observations of a sample of edge-on disk galaxies. A common procedure for the decomposition is to model one component in a region where it dominates and subtract it from the combined light distribution. This technique was successfully carried out e.g. by van der Kruit & Earl (1981, 1982) and Wakamatsu & Hamabe (1984, 1989). Here we present two more examples of bulge-dominated edge-on SO galaxies, namely ESO 506-G33 and NGC 7123, which show an additional small and concentrated central component besides disk and 'bulge'. VELOCITY RESOLVED SPECTROSCOPY OF MOLECULAR HYDROGEN EMISSION IN NGC6240
G. S. Wright, T. R. Geballe, and J. R. Graham (California Univ., Berkeley.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 195-196 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

NGC6240 is a member of the class of luminous galaxies which emit a significant fraction of their total light in the infrared. Based on its highly disturbed morphology, Fosbury and Wall (1979) suggested that the system may be a merger of two gas rich galaxies. It has two nuclei separated by 2 arcsec which are visible in the near infrared and at radio wavelengths and CO observations show that the galaxy contains a large mass of molecular gas. Unusually strong H2 emission lines dominate the near infrared spectrum of this galaxy. The galaxy emits approximately 4x10(exp 7) solar luminosity in the 2.12 micron v = 1 to 0 S(1) line alone, an order of magnitude more than other merging or starburst galaxies. To provide a better understanding of the physical processes responsible for the H2 emission from NGC6240 we have begun a program to obtain high spectral resolution observations using the echelle in CGS4 on the UKIRT. Preliminary data which were obtained in February 1991 are presented here. It is intended to obtain further observations with twice the spatial and spectral resolution in June of this year. OBSERVATIONS OF IRAS F10214+4724 AT THE NOBEYAMA MILLIMETER ARRAY
K. Sakamoto (Nobeyema Solar Radio Observatory, Japan.), S. Ishizuki (Nobeyema Solar Radio Observatory, Japan.), R. Kawabe (Nobeyema Solar Radio Observatory, Japan.), and M. Ishiguro (Nobeyema Solar Radio Observatory, Japan.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 197-198 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

F10214+4724 is an IRAS source at z=2.286 with L(sub FIR) approximately 10(exp 14) solar luminosity. The CO(3-2) emission was detected at the NRAO 12-m telescope, and its molecular gas mass was estimated to be (1-3)x10(exp 11) solar mass. This object is unique and important because it is the first high-z object from which molecular line emission is detected and it enables us to investigate molecular gas content, star forming material, at an early stage of galactic evolution. If IRAS F10214+4724 is a primeval galaxy at the formation process, it is possible the gas has not been collapsed yet to the galactic scale. On the other hand, it is also possible IRAS F10214+4724 is a merging or interacting system like the most of ultra-luminous infrared galaxies. However, since the first detection was made with a medium size single-dish telescope, the precise position, extent, and distribution of the molecular gas had not been determined. The aim of our aperture synthesis observations is therefore to determine position and distribution of molecular gas. Author

Clouds of neutral hydrogen in our galaxy with the absolute value of v greater than 100 km/s cover approximately 10 percent of the sky to a limiting column density of 1 x 10(exp 18) cm(exp -2). These high velocity clouds (HVCs) may dominate the kinetic energy of neutral hydrogen in non-circular motion, and are an important though poorly understood component of galactic gas. It has been suggested that the HVCs can be reproduced by a combination of three phenomena: a galactic fountain driven by disk supernovae which would account for most of the HVCs, material tidally torn from the Magellanic Clouds, and an outer arm complex which is associated with the large scale structure of the warped galactic disk. We sought to detect HVCs in external galaxies in order to test the galactic fountain model. Author

A COMPARISON OF EXTINCTION CURVES FOR DUST IN GALAXIES OF DIFFERENT HUBBLE TYPES
Leisa K. Townsley and Jill S. Price (Bentley Coll., Boston, MA.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 203-204 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A sample of 25 galaxies of various Hubble types has been observed in a variety of filters. Extinction curves have been generated for absorption regions in these galaxies using a technique which previously had been used on just a few galaxies; for example, NGC 205, NGC 185, NGC 3077, and M31. The results from these studies suggested that there may be

systematic trends in dust properties with Hubble type. This would not be surprising; dust properties should vary with metallicity, for example. It is well known that some galaxies and their interstellar materials should reflect this difference. Author

MOLECULAR CLOUDS IN THE CENTERS OF GALAXIES: CONSTRAINTS FROM HCN AND CO-13 LINE EMISSION
S. Aalto, J. H. Black (Arizona Univ., Tucson.), R. S. Booth, and L. E. B. Johansson *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 205-206 Sponsored in part by Swedish Natural Science Research Council; European Southern Observatory; Associated Universities, Inc.; and NSF (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have searched for HCN J=1-0 line emission in the centers of 12 galaxies and have detected it in 10 of them. We have obtained complementary data on J=1-0 and 2-1 transitions of CO-12 and CO-13 in these systems. The ratio of integrated intensities, I(CO 1-0)/I(HCN 1-0) = 25 +/- 11 for this sample. We find that HCN emission of this strength can be produced under conditions of subthermal excitation. In combination with the line ratios in CO and CO-13, HCN puts constraints on the mean conditions of molecular clouds and on the mix of cloud types within the projected beam. Author

MOLECULAR GAS CONTENT OF GALAXIES IN THE HYDRA-CENTAURUS SUPERCLUSTER
W. K. Huchtmeier *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 207-208 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A survey of bright spiral galaxies in the Hydra-Centaurus supercluster for the CO(1-0) transition at 115 GHz was performed with the 15m Swedish-ESO submillimeter telescope (SEST). A total of 30 galaxies have been detected in the CO(1-0) transition out of 47 observed, which is a detection rate over 60%. Global physical parameters of these galaxies derived from optical, CO, HI, and IR measurements compare very well with properties of galaxies in the Virgo cluster. Author

GALACTIC OSCILLATIONS
B. F. Smith and R. H. Miller (Chicago Univ., IL.) *In its* The Evolution of Galaxies and Their Environment Jan. 1993 p 209-210 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Several oscillations have been identified in spherical galaxy models. These are normal mode oscillations in a stable galaxy. Each has its own distinct period and spatial form, and each rings without detectable damping through a Hubble time. The most important are: (1) a simple radial pulsation (fundamental mode), in which all parts of the galaxy move inward or outward with the same phase; and (2) a second spherically symmetrical radial mode with one node, so material inside the node moves outward when material outside moves inward. Numerical experiments suggest that normal mode oscillations may be present in nearly all galaxies at a considerably higher amplitude than has previously been thought. Amplitudes typically run a few percent of equilibrium values, and periods are around 50-300 Myrs in typical galaxies. These time scales are long enough that gas trapped near the center could cool during an oscillation cycle, allowing star formation activity. The second mode oscillations could cause bursts of star formation. Author

A NEW METHOD TO SIMULATE VERTICAL AND HORIZONTAL STRUCTURE IN GALACTIC DISKS
Julianne J. Dalcanton and James E. Gunn *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 211-212 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have modified the particles in an N-body treecode to have different softening lengths in the horizontal and vertical directions. This allows us to simultaneously have thin enough particles to resolve the vertical structure in galactic disks, and horizontally large enough particles to suppress the vertical heating due to two-body effects. Author

THE VELOCITY FIELDS OF ELLIPTICAL GALAXIES: STEPS TOWARD A SOLUTION OF THE INTRINSIC SHAPE PROBLEM
Thomas S. Statler and Anne M. Fry *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 213-214 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

One of the few surviving signatures, at low redshift, of the process of galaxy formation should be the distribution of shapes of elliptical galaxies. Yet the problem of inferring this distribution from the observed ellipticals is still unsolved, because insufficient use has been made of kinematic information. The levels of 'sophistication' of the theoretical models and of the observations have up to now been poorly matched. The kinematic data available for most ellipticals consists of only major and minor axis spectra; and Franx et al. (1991) find, using simple geometric models, that the addition of only one kinematic parameter (the ratio of minor axis to major axis rotation velocity) to the photometry is just not enough to finely constrain the intrinsic shape distribution. On the other hand, the more elaborate self-consistent models (e.g., Levison and Richstone 1987, Statler 1987) have made only infrequent and model-dependent predictions of complicated velocity patterns, mostly at small radii, and have not discussed how they change with shape. Maffei 2 is one of the closest large spiral galaxies lying just beyond the Local Group. It would probably be one of the most heavily studied galaxies in the sky were it not for the approximately 5 magnitudes of visual extinction resulting from its position behind the Galactic plane. It is the site of a burst of nuclear star formation indicated by strong infrared and radii continuum emission. Interferometric maps of CO-12 and CO-13 emission indicate that star formation is associated with a barlike structure consisting of arms of molecular gas that extend from within approximately 50 pc of the dynamical center out to a radius of at least 500 pc. HI maps have shown the galaxy to have an angular extent of approximately 15 feet and a neutral gas mass typical of a large spiral galaxy. Derived from text

LUMINOSITIES OF H ALPHA EMITTING REGIONS IN A PAIR OF INTERACTING GALAXIES IN THE BOOTES VOID
D. Weistrop (Nevada Univ., Las Vegas.), P. Hintzen (Nevada Univ., Las Vegas.), R. Kennicutt (Arizona Univ., Tucson.), C. Liu (Arizona Univ., Tucson.), J. Lowenthal (Arizona Univ., Tucson.), K.-P. Cheng, R. Oliversen, and B. Woodgate *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 217-218 (For primary document see N93-26706 10-90)
(Contract NAS5-31231)
Avail: CASI HC A01/MF A04

Luminosities of H alpha emission from a pair of interacting galaxies in the low density environment of the Bootes void are presented. CG 692 (IRAS 1519+5050) has an H alpha luminosity of 2 x 10(exp 42) ergs s(exp -1), indicating a star formation rate of 18.4 solar mass yr(exp -1). Individual extranuclear H alpha regions have luminosities of approximately 10(exp 40) ergs s(exp -1). These luminosities are similar to those found for H II regions in bright, late-type galaxies in more densely populated parts of the Universe. Author

NUMERICAL SIMULATIONS OF BENT, DISRUPTED RADIO JETS

Chris Loken and Jack O. Burns *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 219-220 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present preliminary results from three-dimensional hydrodynamical simulations designed to investigate the physics of jet bending and disruption. The specific scenario considered here involves a mildly supersonic jet crossing a contact discontinuity at the interface between the interstellar medium (ISM) and the intercluster medium (ICM) and then encountering a cross-wind in the ICM. The resultant morphologies show many of the features observed in radio sources including jet flaring, bending, and extended tails. Author

NUMERICAL MODELS OF JET DISRUPTION IN CLUSTER COOLING FLOWS
Chris Loken, Jack O. Burns, Kurt Roettiger, and Mike Norman (Illinois Univ., Urbana.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 221-222 (For primary document see N93-26706 10-90)
(Grant NSF AST-90-12353)
Avail: CASI HC A01/MF A04

We present a coherent picture for the formation of the observed diverse radio morphological structures in dominant cluster galaxies based on the jet Mach number. Realistic, supersonic, steady-state cooling flow atmospheres are evolved numerically and then used as the ambient medium through which jets of various properties are propagated. Low Mach number jets effectively stagnate due to the ram pressure of the cooling flow atmosphere while medium Mach number jets become unstable and disrupt in the cooling flow to form amorphous structures. High Mach number jets manage to avoid disruption and are able to propagate through the cooling flow. Author

ATOMIC HYDROGEN IN THE DISTURBED EDGE-ON GALAXY NGC 4631
Richard J. Rand and J. M. vanderHulst *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 223-224 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present WSRT HI observations of the nearby, disturbed, edge-on galaxy NGC 4631. A low-resolution (45 in. x 87 in.) map shows previously unknown tidal debris at large distances from the plane, and two dwarf companions. A high resolution (12 in. x 22 in.) map reveals a very disturbed gas layer in NGC 4631, with a wealth of small-scale structure. The most striking discovery is a supershell in the eastern half of the disk with a diameter of about 3 kpc, a mass of approximately 10 exp 8 solar mass and a tentative expansion velocity of 45 km/s. If the expansion is real, the energy which must have been injected by supernovae to explain the shell's current parameters is roughly 4 x 10(exp 55) ergs. Such a high energy requirement suggests an alternative formation mechanism, such as a collision with a small companion. Author

THE MORPHOLOGY OF AND LOCATIONS OF STAR FORMATION IN IMPACT INDUCED RING GALAXIES
Susan A. Lamb, Richard A. Gerber, and Dinshaw S. Balsara *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 225-226 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Observed ring galaxies appear to fall into two major types. The first tends to consist of isolated galaxies which display a smooth, apparently circular ring and a central nucleus. These have been variously classified as R(S) by de Vaucouleurs (1959) and as type O by Few and Madore (1986). The second class of ring galaxy nearly always has a close companion of comparable size (no less than about one tenth that of the ring galaxy). In these objects the ring is knotty in appearance, is usually elliptical, even when deprojected on the sky, and is often open on one side, having a 'horse shoe' or 'banana' shape. The nucleus does not usually appear at the center of the ring and is sometimes apparently absent, giving rise to an 'empty ring' galaxy. deVaucouleurs et al. (1976) designated this second type as RING, while Few and Madore (1986) have classified similar galaxies as P type. These galaxies have elevated far IR emission, bright HII regions, and blue spectral colors. The different environments of the two types or ring galaxy, together with their overall morphological and spectral differences suggest that the R(S)/O type are most probably the result of an instability that occurs in isolated galaxies, whereas the RING/P type appears to be the result of a recent collision between two roughly equal mass objects, at least one of which is a disk galaxy. Theys and Spiegel (1976) studied a sample of this latter type and identified three subclasses: RE: galaxies with crisp, empty rings; RN: galaxies like those of RE but with off-center nuclei; RK: galaxies having single dominant knots or condensations in the rings. A presentation of a preliminary understanding of the connections between these different observed forms in terms of parameters which are intrinsic to the galaxy system, such as time since collision and impact parameter, and in terms of our line of sight view is the purpose of this paper. Here we report results we have obtained from three dimensional computer simulations of collisions between equal mass galaxies, one of which is a rotating, disk galaxy containing both gas and stars and the other is an elliptical containing stars only. We have used a combined n-body/SPH program (see Balsara, 1990) to model fully self consistent models in which the halo mass is 2.5 times that of the disk and gas comprises ten percent of the disk mass. THE CRITICAL DENSITY FOR STAR FORMATION IN HII GALAXIES
Christopher L. Taylor (Minnesota Univ., Minneapolis.), Elias Brinks, and Evan D. Skillman (Minnesota Univ., Minneapolis.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 227-228 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The star formation rate (SFR) in galaxies is believed to obey a power law relation with local gas density, first proposed by Schmidt (1959). Kennicutt (1989) has shown that there is a threshold density above which star formation occurs, and for densities at or near the threshold density, the DFR is highly non-linear, leading to bursts of star formation. Skillman (1987) empirically determined this threshold for dwarf galaxies to be approximately 1 x 10(exp 21) cm(exp -2), at a linear resolution of 500pc. During the course of our survey for HI companion clouds to HII galaxies, we obtained high resolution HI observations of five nearby HII galaxies. HII galaxies are low surface brightness, rich in HI, and contain one or a few high surface brightness knots whose optical spectra resemble those of HII regions. These knots are currently experiencing a burst of star formation. After Kennicutt (1989) we determine the critical density for star formation in the galaxies, and compare the predictions with radio and optical data. Author

NUMERICAL SIMULATIONS OF GALACTIC WAKES
Eric A. Lufkin *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 229-230 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have performed a series of numerical simulations which examine the simple but realistic case of a galaxy with a smooth potential corresponding to a King profile, and with no interstellar medium. This corresponds to the case of an early-type cluster galaxy that has previously been stripped of its gas. The simulations provide a numerical basis for future work involving galaxies with interstellar media. We use a time-explicit finite difference code (Lufkin & Hawley 1992, ApJ submitted) to obtain solutions to the nonlinear equations for adiabatic flow in axisymmetry. The computational grid covers a region extending 500 kpc from a stationary galaxy radially and along the symmetry axis. We use a graded mesh, allowing for full resolution near the galaxy. Because the assumed potential has a finite depth, no artificial inner boundary condition is necessary; reflection symmetry at the axis is assumed. With a total grid size of 64 radial x 128 vertical, each run requires approximately 5 minutes of cpu time on the NCSA Cray-2. Derived from text

THE CASE OF MISSING CO-13 IN MERGERS
Fabienne Casoli (Observatoire de Paris-Meudon, France.), Christophe Dupraz

(Observatoire de Paris-Meudon, France.), and F. Combes (Observatoire de Paris-Meudon, France.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 231-232 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present a comparison of the CO-13 and CO-12 emissions of six systems of merging galaxies: NGC 828, NGC 3256, NGC 4194, NGC 6240, Arp 220, and Arp 299. The observations were made in both J=1-0 and J=2-1 transitions with the IRAM 30 m and SEST 15 m telescopes. In all galaxies but NGC 828, the CO-13 is much weaker than in spiral galaxies. The average emissivity ratios measured at the few kiloparsec scale are: CO-12(1-0)/CO-13(1-0) approx. equals 30, CO-12(2-1)/CO-13(2-1) approx. equals 40. These values are significantly larger than those usually measured in normal spiral galaxies, which are always between 5 and 15 for the J=1-0 line. We show that such a peculiar behavior cannot be interpreted as due to the dominant presence of diffuse gas and it cannot be attributed to optically thin CO emission either. The faint CO-13 emission of mergers must result from either an underabundance of CO-13 or an overabundance of CO-12. They may be accounted for by different mechanisms: CO-13 molecules are more easily photodissociated than CO-12 ones - however our observations seem to rule out physical conditions characteristic of photodissociation regions; in the course of the merging, large amounts of unprocessed gas, with a high (CO-12/CO-13) abundance ratio, are driven from the external regions of the progenitor galaxies to the new nucleus - this could increase the (CO-12/CO-13) ratio by a factor of 2; the interstellar medium can also be quickly enriched in C-12 (thus in CO-12) by a factor of 2, due to selective nucleosynthesis of this isotope (vs. C-13) in the massive stars born during the starburst. The last two processes can thus significantly contribute to the weakness of the CO-13 lines. The high CO-13-to-CO-12 line ratios that we have measured are due to the deep transformations that take place in the interstellar medium during the merging and the starburst: indeed, the only object with nearly normal line ratios, NGC 828, appears less perturbed and active in star formation than the other sources in the sample. In most mergers, the faintness of the CO-13 emission may indicate that the conversion factor from CO-12 emissivities to H2 column densities could differ substantially from the standard galactic value. Author (revised)

DENSITY WAVE TRIGGERED STAR FORMATION IN GRAND DESIGN SPIRALS
J. Cepa, J. E. Beckman, and J. H. Knapen *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 233-234 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

In normal spiral galaxies the arms are the main sites for star formation. This is the cause of their optical contrast compared with the rest of the disc. The spiral structure can be observed as a higher concentration of H2 regions, neutral gas (both atomic and molecular via CO), dust and stars than in the interarm disc. It seens generally accepted that, at least in grand design spirals, there are density waves in the discs. However, several questions are not clear yet and still under discussion. An important question could be termed the triggering dilemma (by analogy with the 'winding dilemma' raised in the forties): Is the enhanced star formation in the spiral arms triggered by the passage of a system of density waves or is it simply due to the presence of a higher column density of gas there? In the present work, we use triggering in the same sense as the moderate to strong triggering defined by Elmegreen (1992), that is to say that star formation in the arms occurs at a rate faster than that in the interarm zone, relative to the available placental gas. Our group has designed several tests to elucidate whether or not star formation is triggered in the arms with respect to the interarm region and we summarize one of them, that of the ratio of the star formation efficiency in the arms divided by that of the interarm zone at the same galactocentric distance which we may call the relative massive star formation efficiency, where the efficiency is defined using the ratio of the mass of stars (evaluated via the H alpha flux) to the mass of neutral gas, atomic plus molecular (which must be measured with the adequate angular resolution). If the relative efficiency is of order unity, the star formation is proportional to the mass of gas, if some kind of induced star formation is present, the relative efficiency should be considerably larger than unity. Avail: CASI HC A01/MF A04

The closest, brightest and best resolved galaxy in the sky, the Large Magellanic Cloud, is a prototype of the late-type disk systems referred to collectively as barred Magellanic spiral galaxies (SBm). These systems occupy a pivotal stage in the Hubble sequence since they represent the transition from spiral disk galaxies to chaotic, irregular galaxies and are characterized by an asymmetric spiral arm which emanates from one end of a high surface brightness bar. We present evidence that the formation of the one-armed spiral morphology involves the tidal interaction with a companion galaxy. In summary the major points of our observational investigation include the following: (1) The vast majority of one-armed spiral galaxies possess bright nearby neighbors which appear to be physically associated. (2) The HI gas distribution and kinematics of one pair of SBm galaxies clearly reveal this system to be tidally interacting. (3) The infrared properties of the bars in two SBm galaxies support optical studies of bar luminosity profiles in late-type systems, and also suggest that the formation of compact star forming regions in these bars may not be uncommon.

Avail: CASI HC A01/MF A04

Gerola et al. (1983) propose that isolated dwarf galaxies can form during galaxy interactions. As evidence of this process, Mirabel et al. (1991) find 10(exp 9) solar mass clouds and star formation complexes at the outer ends of the tidal arms in the Antennae and Superantennae galaxies. We describe observations of HI clouds with mass greater than 10(exp 8) solar mass in the interacting galaxy pair IC 2163/NGC 2207. This pair is important because we believe it represents an early stage in the formation of giant clouds during an encounter. We use a gravitational instability model to explain why the observed clouds are so massive and discuss a two-dimensional N-body simulation of an encounter that produces giant clouds. Recent observations of this famous ring galaxy, including optical and near-infrared CCD surface photometry, and VLA radio continuum and 21 cm line mapping (Higdon 1992b, in prep.), have inspired a renewed modeling effort. Toomre's (1978, in The Large-scale Structure of the Universe, eds. Longair and Einasto) series of restricted three-body simulations demonstrated how the multiple rings could be produced in a nearly head-on galaxy collision. New models with a halo-dominated potential based on the 21 cm rotation curve are able to reproduce such details as the spacing between rings, ring widths, offset of the nucleus, and several kinematical features, thus providing strong support for the collisional theory. The new observations have shown there are little or no old stars in Cartwheel; it may consist

almost entirely of gas and stars produced as a result of compression in the ring wave. To model this process Smooth Particle Hydrodynamics (SPH) simulations of the Cartwheel disk have been performed. Fixed gravitational potentials were used to represent the Cartwheel and a roughly 30 percent mass collision partner. The interaction dynamics was treated as in the usual restricted three-body approximation, and the effects of local self-gravity between disk particles were calculated. We are particularly interested in testing the theory that enhanced star formation in waves is the result of gravitational instability in the compressed region (see e.g. Kennicutt 1989, ApJ 344, 685). The gas surface density in a number of simulations was initialized to a value slightly below the threshold for local gravitational instability throughout most of the disk. The first ring wave produces relatively modest compressions (a factor of order a few), triggering instability in a narrow range of wavelengths. Self-gravity in the disk is calculated over a comparable range of scales. Simulations were run with isothermal, adiabatic, and adiabatic with radiative cooling characterized by a relatively short timescale. The isothermal approximation is good except in the vicinity of the strong second (inner) ring, and several snapshots from one case are shown in the figure below. Flocculent spiral segments are present before the collision, and these are compressed into dense knots in the ring wave. These knots are likely to be sites of vigorous star formation. In the strong rarefaction behind the outer ring most of the knots are radially stretched and sheared, giving rise to spoke-like features. A few dense knots are evidently very tightly bound, because they retain their coherence and are stretched relatively little through the rarefaction. This is in accord with evidence for continuing star formation in some spokes (Marcum, Appleton and Higdon 1992). The number and spacing of spokes is a direct function of the scale of the gravitational instability in the disk. Thus, the gravitational instability theory, together with the hypothesis that massive stars are only formed in dense knots of gas, can account for most of the distinct morphology of the Cartwheel. CLUSTER TIDAL FIELDS: EFFECTS ON DISK GALAXIES
Monica Valluri *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 242-243 Sponsored in part by Council of Scientific and Industrial Research (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A variety of observations of galaxies in clusters indicate that the gas in these galaxies is strongly affected by the cluster environment. We present results of a study of the dynamical effects of the mean cluster tidal field on a disk galaxy as it falls into a cluster for the first time on a bound orbit with constant angular momentum (Valluri 1992). The problem is studied in the restricted 3-body framework. The cluster is modelled by a modified Hubble potential and the disk galaxy is modelled as a flattened spheroid. Derived from text

HIGH CHEMICAL ABUNDANCES IN STRIPPED VIRGO SPIRAL GALAXIES
E. D. Skillman, R. C. Kennicutt (Arizona Univ., Tucson.), and G. A. Shields (Texas Univ., Austin.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 244-245 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Based on a comparison of the oxygen abundances in H 2 regions in field and Virgo cluster late type spiral galaxies, Shields, Skillman, & Kennicutt (1991) suggested that the highly stripped spiral galaxies in the Virgo cluster have systematically higher abundances than comparable field galaxies. In April 1991 and May 1992 we used the blue channel spectrograph on the MMT to obtain new observations of 30 H 2 regions in Virgo spiral galaxies. These spectra cover the wavelength range from (O II) lambda 3727 to (S II) lambda 6731. We now have observed at least 4 H II regions in 9 spiral galaxies in the Virgo cluster. Combining (O II) and (O III) line strengths, we calculate the H II region oxygen abundances based on the empirical calibration of Edmunds & Pagel (1984). These observations show: (1) The stripped, low luminosity Virgo spirals (N4689, N4571) truly have abundances characteristic of much more luminous field spirals; (2) Virgo spirals which show no evidence of stripping (N4651, N4713) have abundances comparable to field galaxies; and (3) Evidence for transition galaxies (e.g., N4254, N4321), with marginally stripped disks and marginal abundance enhancements. The new observations presented here confirm the validity of the oxygen over-abundances in the stripped Virgo spirals. Shields et al. (1991) discussed two different mechanisms for producing the higher abundances in the disks of stripped galaxies in Virgo. The first is the supression of infall of near-primordial material, the second is the suppression of radial inflow of metal-poor gas. Distinguishing between the two cases will require more observations of the Virgo cluster spirals and a better understanding of which parameters determine the variation of abundance with radius in field spirals (cf., Garnett & Shields 1987). DEEP H ALPHA IMAGES OF INTERACTING GALAXIES
S. C. Beck and O. Kovo *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 246 (For primary document see N93-26706 10-90)

Gravitational interactions between galaxies are believed to increase star formation activity dramatically, and most of the brightest starburst galaxies show clear signs of recent interactions. However, it is still not known how interaction triggers star formation, nor are there models to relate the type or strength of interaction to the location or amount of star formation. We report on a series of deep H alpha images of interacting and post-interaction galaxies which we took with the purpose of finding the young stars and ionized gas in these objects. We were motivated in part by the hope that by studying the very recently formed stars we could see how the interaction process had affected the star formation. We observed the galaxies through 50 A-wide filters, one on the redshifted H alpha line and one off, and a standard R filter. Depending on the galaxy and conditions, images in the B, V, and I filters were also obtained. The images were recorded with a 4x7 ft. or 17 ft. diameter CCD at the 1-meter telescope of the Wise Observatory in Mitzpe Ramon. The H alpha and continuum images are used, together with observations at other wavelengths, to put together as complete a picture as possible of star formation and interactions in each galaxy. The complete observation set is not yet available for all the galaxies but certain results are already clear. There do not seem to be any correlations between H 1 and H alpha structures. In some H 1 plume galaxies H alpha extensions were seen on the other side of the galaxy from the H 1; in others extensive H alpha filaments have been found but not H 1. The preliminary results agree with the simplest model that interaction-induced star formation will be concentrated in the system center, since that is where the mass ends up. Derived from text

The galaxy merging is investigated with hydrodynamical processes taken into account. For this purpose, the 3D calculations are performed by the use of a smoothed particle hydrodynamics (SPH) scheme combined with an N-body scheme. In these calculations, we find a new merging criterion and the dependence of the central phase space density of merger remnants upon the gas fraction in progenitors. It is concluded that ellipticals can be formed just by merging of fairly gas-rich primordial galaxies, not ordinary spiral galaxies. Author

The idea that galaxy interactions and merging are related to the generation of starburst and AGN activity in galactic nuclei has been the subject of intensive investigations over the past several years and is still a matter of lively debate. Peculiar morphologies, indicative of tidal interactions, have been detected in high-luminosity radio galaxies, in quasars, and in ultraluminous IRAS galaxies. In addition, low-luminosity radio and active galaxies show similar evidence for a recent merger or for nearby companions.

In a recent CCD optical study of galaxies selected on the basis that they all contain well defined radio jets, it was found that almost half of the sample consists of pairs of elliptical galaxies. Many of these low-luminosity radio galaxies with companions show a well defined distorted radio jet structure at the VLA scale with an S- or C-shaped morphology. We have developed a general numerical simulation algorithm for ballistic radio jets with the intention of applying this model to the study of the bent jets seen in colliding pairs of galaxies and with the hope of testing the well documented interaction-activity connection. In our model the morphological evolution of the jets is determined by their response to the simple mechanical forces (i.e., gravity and ram pressure) imposed on them from both the host and the companion galaxies. Radiative losses, jet precession, magnetic effects, relativistic terms, and hydrodynamic instabilities have all been ignored. Starting with a previously derived collision model for the interacting pair of elliptical galaxies NGC 4782/4783, we have used our algorithm to simulate the specific two-sided jet morphology seen in the radio source 3C 278, associated with NGC 4782. This is the first time that such jet simulations have been produced for a galaxy pair whose relative orbit was determined independently from the jet modeling. Derived from text

DECLINING ROTATION CURVES IN INTERACTING GALAXIES
Ralf-Juergen Dettmar and Brian A. Skiff (Lowell Observatory, Flagstaff, AZ.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 251-252 Sponsored in part by DFG (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A declining rotation curve was recently found for the galaxy NGC 3521 by HI synthesis telescope observations (Casertano and van Gorkom 1991). From a comparison of the shapes of rotation curves for a larger sample of galaxies Casertano and van Gorkom argue that this is due to initial properties during the phase of galaxy formation. In several studies of global properties of galaxies, NGC 3521 was always considered a 'normal' unbarred, non-interacting, isolated spiral. However, we present CCD surface photometry that shows at low surface brightness levels the typical signs of interaction or even merging. Derived from text

A NEW OBSERVATIONAL AND NUMERICAL STUDY OF TIDAL INTERACTIONS IN M81-M82-NGC3077 SYSTEM
M. S. Yun, P. T. P. Ho, N. Brouillet (Bordeaux Univ., France.), and K. Y. Lo (Illinois Univ., Urbana.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 253-254 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

A nearby system of interacting galaxies M81-M82-NGC3077 triplet (D = 3.3 Mpc; Freeman & Madore 1988) has been studied using multi-wavelength observations and numerical simulations to obtain a comprehensive understanding on the dynamics and the consequences of tidal interactions in a group environment. The VLA 12-field Mosaic H I observations of 2 x 1.5 deg. region have revealed a vast array of H I filaments which suggests that the severity and extent of tidal disruptions far exceed the previous estimates. A tidal remnant of the former H I disk of M82 extending up to 30 kpc (in projection) is identified for the first time, and the pervasive effects of the tidal disruption are traced into the inner disk by optical and CO observations, including a kinematic trace of a large scale bar potential (Yun, Ho, & Lo 1992). The H I disk of M81 is traced out to 40 kpc in radius, and a large scale (I approx. 20 kpc) velocity anomaly ('High Velocity Trough'), which may be a remnant of a gaseous collision, is found within the disk of M81. The large H I bridge between M81 and NGC 3077 (van der Hulst 1979) is also found to extend approx. greater than 50 kpc further, bending around NGC 3077, toward M82. The total H I detected in this experiment, 5.6 x 10(exp 9) solar mass, represents the majority of the single-dish flux (Appleton, Davies, & Stephenson 1981) and suggests that the bulk of H I found in the region belongs to the three galaxies and the tidal filaments. The impact and details of the tidal interactions have been further examined through the use of numerical techniques. The 'restricted 3-body' approach was used to simulate the observed distribution of tidal H I streamers connecting the three galaxies, and the success of the simulation is further strengthened by the accurate predictions on the gas kinematics. The merger theory for the formation of elliptical galaxies is examined by conducting a dynamical study of the expected frequency of merging galaxies on the basis of the collisional theory, using galaxy models without halos. The expected merger rates obtained on the basis of the collisional theory fall about a magnitude below the observational value in the present epoch. In the light of current observational evidence and the results obtained, a marked regularity in the formation of ellipticals is indicated, followed by secular evolution by mergers. Author

LUMINOSITY SEGREGATION IN GALAXY CLUSTERS AS AN INDICATION OF DYNAMICAL EVOLUTION
F. W. Baier and K.-H. Schmidt *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 265-266 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Theoretical models describing the dynamical evolution of self-gravitating systems predict a spatial mass segregation for more evolved systems, with the more massive objects concentrated toward the center of the configuration. From the observational point of view, however, the existence of mass segregation in galaxy clusters seems to be a matter of controversy. A special problem in this connection is the formation of cD galaxies in the centers of galaxy clusters. The most promising scenarios of their formation are galaxy cannibalism (merger scenario) and growing by cooling flows. It seems to be plausible to consider the swallowing of smaller systems by a dominant galaxy as an important process in the evolution of a cD galaxy. The stage of the evolution of the dominant galaxy should be reflected by the surrounding galaxy population, especially by possible mass segregation effects. Assuming that mass segregation is tantamount to luminosity segregation we analyzed luminosity segregation in roughly 40 cD galaxy clusters. Obviously there are three different groups of clusters: (1) clusters with luminosity segregation, (2) clusters without luminosity segregation, and (3) such objects exhibiting a phenomenon which we call antisegregation in luminosity, i.e. a deficiency of bright galaxies in the central regions of clusters. This result is interpreted in the sense of different degrees of mass segregation and as an indication for different evolution stages of these clusters. The clusters are arranged in the three segregation classes 2, 1, and 0 (S2 = strong mass segregation, S1 = moderate mass segregation, S0 = weak or absent mass segregation). We assume that a

galaxy cluster starts its dynamical evolution after virialization without any radial mass segregation. Energy exchange during encounters of cluster members as well as merger processes between cluster galaxies lead to an increasing radial mass segregation in the cluster (S1). If a certain degree of segregation (S2) has been established, an essential number of slow-moving and relative massive cluster members in the center will be cannibalized by the initial brightest cluster galaxy. This process should lead to the growing of the predominate galaxy, which is accompanied by a diminution of the mass segregation (transition to S1 and S0, respectively) in the neighborhood of the central very massive galaxy. An increase of the areal density of brighter galaxies towards the outer cluster regions (antisegregation of luminosity), i.e. an extreme low degree of mass segregation was estimated for a substantial percentage of cD clusters. This result favors the cannibalism scenario for the formation of cD galaxies. Derived from text

KINEMATICS OF COMPACT GROUPS AND MORPHOLOGIES OF THE MEMBER GALAXIES
Claudia MendesdeOliveira and Paul Hickson *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 267-268 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present the results of a kinematical and morphological study of galaxies in the Hickson compact groups. The redshift survey of 457 galaxies has been completed. The great majority of the galaxies have velocities within about 1000 km/s(exp -1) of the median velocity of the group. The velocities of the groups range from 1380 to 41731 km/s(exp -1) with a median of 8889 km/s(exp -1), corresponding to a median distance of 89 h(exp -1)Mpc. With the addition of the radial velocity selection criterion, a relatively large sample of physically dense compact groups was defined. The nature of the velocity dispersion-morphology relation (Hickson, Kindl and Huchra 1989, hereafter HKH) is investigated. This is the tendency of groups with high velocity dispersions to contain fewer late type galaxies. We find that this strong correlation is not due to any sample selection effects. The morphology concordance in compact groups (HKH), which is the trend for galaxies in a group to have similar morphological types, can be fully explained by the velocity dispersion-morphology correlation. A significant correlation is found between crossing time and the fraction of gas-rich galaxies in the groups. Groups with short crossing times typically contain fewer late-type galaxies. This may be evidence that significant dynamical evolution has occurred in these groups. Author (revised)

(Grant NSF AST-90-12353)
Avail: CASI HC A01/MF A04

We have amassed a large sample of velocity data for the cluster of galaxies Abell 2634 which contains the wide-angle tail (WAT) radio source 3C 465. Robust indicators of location and scale and their confidence intervals are used to determine if the cD galaxy, containing the WAT, has a significant peculiar motion. We find a cD peculiar radial velocity of 219 plus or minus 98 km s(exp -1). Further dynamical analyses, including substructure and normality tests, suggest that A 2634 is an unrelaxed cluster whose radio source structure may be bent by the turbulent gas of a recent cluster-subcluster merger. X RAY OPACITY IN CLUSTER COOLING FLOWS
Michael W. Wise and Craig L. Sarazin *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 271-272 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have calculated the emergent x-ray properties for a set of spherically symmetric, steady-state cluster cooling flow models including the effects of radiative transfer. Opacity due to resonant x-ray lines, photoelectric absorption, and electron scattering have been included in these calculations, and homogeneous and inhomogeneous gas distributions were considered. The effects of photoionization opacity are small for both types of models. In contrast, resonant line optical depths can be quite high in both homogeneous and inhomogeneous models. The presence of turbulence in the gas can significantly lower the line opacity. We find that integrated x-ray spectra for the flow cooling now are only slightly affected by radiative transfer effects. However x-ray line surface brightness profiles can be dramatically affected by radiative transfer. Line profiles are also strongly affected by transfer effects. The combined effects of opacity and inflow cause many of the lines in optically thick models to be asymmetrical.

ON THE NATURE OF STAR FORMATION IN COOLING FLOW ELLIPTICALS
Patricia C. Hanlan, James M. Schombert (Jet Propulsion Lab., California Inst. of Tech., Pasadena.), and Mary Barsony (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 273-274 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present evidence based on narrow band optical and near-IR imaging that field and cluster cooling flow galaxies are enriched in low mass stars as a result of recent, truncated IMF star formation from accreting gas. We imaged 25 normal and 6 cooling flow ellipticals using a narrow blue band system. All galaxies have similar mean colors and color gradients. Near IR surface photometry was obtained for three normal ellipticals, three cooling flow ellipticals, and three cluster cooling flows. Derived from text

STAR FORMATION IN COOLING FLOW GALAXIES
Nicolas Cardiel and Javier Gorgas *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 275-276 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Spectroscopic observations of central dominant galaxies are reviewed. Through the analysis of absorption spectral features (mainly the strength of the Mg triplet at 5175 A and the break in 4000 A), both in the galaxy centers and along the radii, we will be able to impose limits on the ongoing star formation as the ultimate fate for the large amounts of accreted gas. With the same aim we will carry out a dynamical study based on velocity dispersion measurements. Author (revised)

JET INDUCED STAR FORMATION IN CENTRALLY DOMINANT GALAXIES?
Brian R. McNamara *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 277-278 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Using U-I CCD color maps of two centrally dominant cluster galaxies, we find unusual color structures which may be due to star formation which has been induced by their radio sources. These objects, located in the clusters A1795 and A2597, have blue central colors to radii of 20 kpc, spatially extended emission-line structures, and powerful radio sources. They reside at the centers of cooling flows with mass-accretion rates which are estimated to be approximately greater than 300 solar mass/yr. The regions of bluest local color are superposed on or along their radio-source structures. Our observations suggest that the radio sources associated with these objects may be inducing massive star formation in their central 20 kpc. The star formation may be the result of the radio plasma interacting with the warm emission-line gas and dense, x-ray emitting filaments similar to those recently discovered in two other clusters with the ROSAT Observatory. Since radio jets are likely to be transient, this may help to explain the scatter in the correlations between color and mass-accretion rate, although other factors may also contribute. Alternatively, scattered radiation from a hidden active nucleus or recent mergers may be responsible for the color structure. The color and radio properties of these objects are qualitatively similar but smaller in luminosity and spatial

extent to those found in high redshift radio galaxies. Our observations of galaxies at z approximately = 0.06-0.1 show that processes similar to 'the alignment effect' found in high redshift radio galaxies occur at more recent epochs. Author (revised)

THE DETECTION OF LARGE AMOUNTS OF COOL, X RAY ABSORBING GAS IN DISTANT CLUSTERS OF GALAXIES. WHAT DOES THIS MEAN?

Qingde Wang (Joint Inst. for Lab. Astrophysics, Boulder, CO.) and John T. Stocke *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 279-280 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

We present an x-ray spectral study of 12 distant (z = 0.17-0.54) rich clusters of galaxies observed with the Einstein Observatory Imaging Proportional Counter. These x-ray spectral data show evidence for substantial excess absorptions beyond those expected in the galaxy, indicating the presence of large amounts of x-ray absorbing cool gas in these distant clusters. The mean value of the excess absorptions corresponds to an absorbing gas column density approximately greater than 10(exp 21)/sq cm. We calculate the x-ray luminosities of the clusters with observed fluxes only in the 0.8-3.5 keV band where the fluxes are less effected by the absorptions, and use the temperature-to-luminosity correlation (known only for nearby clusters) to estimate the temperatures of the hot intracluster medium (ICM) in the distant clusters. These temperature estimates, together with the spectral fits, provide further constraints on the column densities in the individual clusters. For the cluster CL 0016+16, the lower limit on the column density is found to be 8 x 10(exp 20)/sq cm at the 99 percent confidence limit. We also show that the ratio of the temperature obtained from the spectral fit to the temperature expected from the correlation tends to decrease with increasing look-back time, indicating possible temperature evolution of the hot ICM in the recent past. The inclusion of this evolutionary effect further increases the absorptions required in fitting the spectra. Derived from text

MERGERS, COOLING FLOWS, AND EVAPORATION

W. B. Sparks *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 281-282 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Mergers (the capture of cold gas, especially) can have a profound influence on the hot coronal gas of early-type galaxies and clusters, potentially inducing symptoms hitherto attributed to a cooling flow, if thermal conduction is operative in the coronal plasma. Heat can be conducted from the hot phase into the cold phase, simultaneously ionizing the cold gas to make optical filaments, while locally cooling the coronal gas to mimic a cooling-flow. If there is heat conduction, though, there is no standard cooling-flow since radiative losses are balanced by conduction and not mass deposition. Amongst the strongest observational support for the existence of cooling-flows is the presence of intermediate temperature gas with x-ray emission-line strengths in agreement with cooling-flow models. Here, x-ray line strengths are calculated for this alternative model, in which mergers are responsible for the observed optical and x-ray properties. Since gas around 10(exp 4) K is thermally stable, the cold cloud need not necessarily evaporate and hydrostatic solutions exist. Good agreement with the x-ray data is obtained. The relative strengths of intermediate temperature x-ray emission lines are in significantly better agreement with a simple conduction model than with published cooling-flow models. The good agreement of the conduction model with optical, infrared and x-ray data indicates that significantly more theoretical effort into this type of solution would be profitable. Author (revised)

A NEUTRAL HYDROGEN SURVEY OF THE HYDRA 1 CLUSTER

Pauline McMahon, Jacqueline vanGorkom, Otto Richter (Space Telescope Science Inst., Baltimore, MD.), and Henry Ferguson (Cambridge Univ., England.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 283-284 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

We are undertaking a project to image the entire volume of the Hydra 1 cluster of galaxies in neutral hydrogen using the VLA. This involves making a series of pointings spaced 30 min. (the half power beam width) apart, each observed at three velocity settings in order to span the whole velocity range of the cluster. The purpose of this survey is to determine the true distribution, both in space and velocity, of gas-rich systems and hence, to deduce what effects a dense environment may have on the evolution of these systems. Most surveys of clusters to date have been performed on optically selected samples. However, optically selected samples may provide misleading views of the distribution of gas-rich systems, since many low surface brightness galaxies have an abundance of neutral gas (Bothun et al. 1987, Giovanelli & Haynes 1989). The Hydra project is providing the first unbiased view of the HI distribution in a cluster of galaxies. Our 5 sigma sensitivity is 4.1 x 10(exp 7) solar M/beam, (assuming H(sub 0) = 75 km s(exp -1) Mpc(exp -1)) and our velocity resolution is 42 km s(exp -1). We have a spatial resolution of 45 sec., which means that only the largest galaxies are spatially resolved enough to determine HI disk size. Our coverage is about 50 percent of the central region plus eight other fields centered on bright spirals within about 2 deg. of the center. Author (revised)

USING X RAY IMAGES TO DETECT SUBSTRUCTURE IN A SAMPLE OF 40 ABELL CLUSTERS

J. J. Mohr, D. G. Fabricant, and M. J. Geller *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 285-286 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Using a method for constraining the dynamical state of a galaxy cluster by examining the moments of its x-ray surface brightness distribution, we determine the statistics of cluster substructure for a sample of 40 Abell clusters. Using x-ray observations from the Einstein Observatory Imaging Proportional Counter (IPC), we measure the first moment M1(r), the ellipsoidal orientation angle theta2(r), and the axial ratio eta(r) at several different radii in the cluster. We determine the effects of systematics such as x-ray point source emission, telescope vignetting, Poisson noise, and characteristics of the IPC by measuring the same parameters on an ensemble of simulated cluster images. Due to the small band-pass of the IPC, the ICM emissivity is nearly independent of temperature so the intensity at each point in the IPC images is simply proportional to the emission measure calculated along the line of sight through the cluster (e.g. Fabricant et al. 1980). Therefore, barring a change superposition of two x-ray emitting clusters, a significant variation in the image centroid M1(r) as a function of radius indicates that the center of mass of the intra-cluster medium (ICM) varies with radius. We argue that such a configuration (essentially an m = 1 component in the ICM density distribution) is a non-equilibrium component; it results from an off-center subclump or a recent merger in the ICM. A STUDY OF THE X RAY ENVIRONMENT OF RADIO GALAXIES

George F. Rhee, Jack O. Burns, and Frazer Owen (National Radio Astronomy Observatory, Socorro, NM.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 287-288 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

We are currently working on a program to use extensive x-ray and radio databases to investigate the relationship between extended radio emission and environment in clusters of galaxies. The radio galaxy morphology is determined using VLA imaging and the x-ray properties are determined from Einstein IPC images. This study is motivated by the hypothesis that the key to understanding radio galaxies lies in the local environment. To test this hypothesis we have studied the detailed relationship between galaxy radio emission and the x-ray morphology of their parent clusters. In this pilot study we have used 35 radio sources found in 27 clusters. We have determined the position angle of the x-ray and radio emission, and x-ray and radio luminosities. The x-ray position was taken to be the position of peak flux of the subclump containing the radio galaxy.

The radio position was taken to be the position of the galaxy. We do not find a correlation between the x-ray and radio source position angle. This remains true when the sample is divided into subsamples according to radio morphology (wide angle tail, twin jet, narrow angle tail galaxies). We find a weak correlation between the radio source luminosity and the x-ray luminosity. We have computed the distance from the radio galaxy position to the center of the x-ray clump. We find a mean distance from the x-ray clump center of 0.16 Mpc for the radio galaxies in this sample. The mean distance to the nearest clump of x-ray emission is typically half the distance to the optical cluster center. We thus find strong evidence that radio galaxies are located very close to clumps of x-ray emission. These subclumps are not always affiliated with the central cluster x-ray emission. This supports our hypothesis that x-ray emission may provide a key to understanding radio galaxy morphology. We find evidence that radio galaxies occur in clusters that contain prominent substructures. Radio galaxies may thus provide an added diagnostic of the cluster dynamical state.

Strong evidence of evolution in cluster of galaxies at relatively low redshift has been indicated by recent x-ray studies. We are conducting a comprehensive optical study of a sample of Abell clusters that are strong x-ray emitters in order to test the x-ray evolution scenarios that have been proposed. The initial observations consist of three-color (B, R, I) imaging of low-redshift (0.025 less than z less than 0.25) Abell clusters using the T2KA CCD on the 0.9m telescope at KPNO the large field (23 ft. x 23 ft., approx. 1 Mpc at $z = 0.025$ and approx. 7 Mpc at $z = 0.25$) gives the unprecedented ability to sample most of the extent of the field of low-redshift clusters using a CCD. Given the advantages of CCDs over photographic plates, we expect to improve on many of the previous studies. A list of x-ray selected cluster of galaxies provides a homogeneous sample of true clusters that cannot be mistaken from apparent over-densities due to projection effects of field galaxies. Some optical indicators of cluster evolution are the population of ratios of cluster galaxies and their spatial distribution, a regular spiral-poor cluster is expected to be more evolved than an irregular spiral-rich cluster. Also regular spiral-poor clusters present high central concentrations while irregular spiral-rich are less concentrated. Variations in the Luminosity Function (LF) can indicate evolution. But in order to build reliable LFs it is necessary to determine the Hubble types of the cluster galaxies. In the past the classifications of cluster galaxies have been done by visual inspection on photographic material, this technique is very limited and can lead to errors when the galaxies are faint. The Hubble types of cluster galaxies can be determined in an objective manner by comparing colors and profiles from surface photometry. To show that this approach is feasible, I have presented preliminary results from the photometric analysis of the Abell-cluster A1213. Colors and profiles of the surface brightness distribution were compared to determine the Hubble types of the cluster galaxies. Author (revised)

Rich clusters of galaxies at moderate redshifts (z approx. .3) have a larger proportion of optically blue galaxies than their low redshift counterparts. Spectroscopic examination of the blue galaxies by various authors has shown that the blue galaxies are generally Seyferts, show evidence for recent star formation, or are foreground objects. Unfortunately, spectroscopy is too time consuming to be used on large samples. Thus, we have looked for a way to separate Seyferts, starbursts, ellipticals and nonmembers using photometry alone. Five moderate redshift clusters, Abell numbers 777, 963, 1758, 1961 and 2218, have been observed in the V, R and K bands. We model the spectral energy distributions of various kinds of galaxies found in clusters and derive observed colors. We have modeled the spectral energy distributions (SED) of several kinds of galaxies and compute their colors as a function of redshift. We expect to see ellipticals, spirals, starbursts, post-starburst and Seyfert galaxies. The SED of elliptical and Sbc galaxies was observed by Rieke and Rieke. The SEDs for the starburst galaxies was created by adding a reddened 10(exp 8) year old burst to a spiral galaxy SED. The post-starburst (E+A) galaxy SEDs are composed of a slightly reddened 10(exp 9) year old burst and elliptical galaxy SED. SEDs for the Seyferts were created by adding a v(exp -1.1) power law, and a hot dust thermal spectrum to the Sbc. From the SEDs the colors of galaxies at various redshifts with assorted filters were computed. Lilly & Gunn (1985) have optical and infrared photometry for a sample of galaxies in CL0024+1654 observed spectroscopically by Dressler, Gunn and Schneider (1985). We have used this data to choose the most appropriate SEDs for our starburst and post-starburst models. The most likely explanation for the optically blue colors in most cluster galaxies is star formation. Very few galaxies lie in the Seyfert locus. Abel 1758 has more Seyfert candidates than the other clusters, we observed. It seems possible to roughly sort types of galaxies in clusters by color alone. The cluster population seems to vary considerably between clusters, but our K selected sample has few Seyferts in any cluster. Author (revised)

The existence of an excess population of blue galaxies in the cores of distant, rich clusters of galaxies, commonly referred to as the 'Butcher-Oemler' effect is now well established. Spectroscopy of clusters at $z = 0.2$-0.4 has confirmed that the luminous blue populations comprise as much as 20 percent of these clusters. This fraction is much higher that the 2 percent blue fraction found for nearby rich clusters, such as Coma, indicating that rapid galaxy evolution has occurred on a relatively short time scale. Spectroscopy has also shown that the 'blue' galaxies can basically be divided into three classes: 'starburst' galaxies with large (O II) equivalent widths, 'post-starburst' E+A galaxies (i.e. galaxies with strong Balmer lines shortward of 4000A but elliptical-like colors, and normal spiral/irregulars. Unfortunately, it is difficult to obtain enough spectra of individual galaxies in these intermediate redshift clusters to say anything statistically meaningful. Thus, limited information is available about the relative numbers of these three classes of 'blue' galaxies and the associated E/SO population in these intermediate redshift clusters. More statistically meaningful results can be derived from deep imaging of these clusters. However, the best published data to date (e.g. MacLaren et al. 1988; Dressler & Gunn 1992) are limited to the cluster cores and do not sample the galaxy luminosity functions very deeply at the bluest wavelengths. Furthermore, only limited spectro-energy distribution data is available below 4000A in the observed cluster rest frame providing limited sensitivity to 'recent' star formation activity. To improve this situation, we are currently obtaining deep, wide-field UBRI images of all known rich clusters at z approx. equals 0.4. Our main objective is to obtain the necessary color information to distinguish between the E+SO, 'E+A', and spiral/irregular galaxy populations throughout the cluster/supercluster complex. At this redshift, UBRI correspond to rest-frame 2500A/UVR bandpasses. The rest-frame UVR system provides a powerful 'blue' galaxy discriminate given the expected color distribution. Moreover, since 'hot' stars peak near 2500A, that bandpass is a powerful probe of recent star formation activity in all classes of galaxies. In particular, it is sensitive to ellipticals with 'UV excess' populations (MacLaren et al. 1988). Author

We are carrying out a long-term project with the main purposes of finding and analyzing low metallicity galaxies. A very small number of very low metallicity galaxies is known up to now. However these ojbects are particularly interesting since they are excellent candidates to 'young galaxies' in evolutionary sense as POX186 (Kunth, Maurogordato & Vigroux, 1988). Since the interstellar matter in these objects is only weakly contaminated by stellar evolution, their study could provide valuable information about the primordial helium abundance and therefore it could place constraints on the different Big-Bang models. The instrumental set up of our survey is an objective-prism used with the Schmidt telescope at Calar Alto Observatory. By using hypersensitized IIIaF emulsion and RG630 filter low resolution spectra in the H alpha region of objects in a wide field is obtained (Rego et al. 1989, Zamorano et al. 1990). Surveys carried out in the past two decades at optical blue wavelengths have also produced large samples of emission-line galaxies (ELGs), for example MacAlpine & Willians 1981 and reference therein, Wasilewski 1983, Salzer and MacAlpine 1988, or Smith et al. 1976. Relying primarily on objective-prism plates taken in the blue, these surveys have found over 3000 blue/emission-line galaxies so far. A significant number of star-forming galaxies are missed by optical surveys in the blue because of their low-excitation spectra (MacAlpine and Willians 1981, Markarian et al. 1981 and references therein) or their low metallicity (Kunth and Sargent, 1986). NUCLEAR ACTIVITY AND THE ENVIRONMENTS OF NEARBY RADIO GALAXIES

Arjun Dey and Wil vanBreugel (Lawrence Livermore National Lab., CA.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 301-302 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

Much of our present understanding of galaxy evolution over a large redshift range is based on the study of samples selected on the basis of non-thermal radio emission. It is therefore necessary to understand the relationship between radio source activity and the host galaxy. Recent observations suggest that there is a connection between radio galaxy (RG) activity and radio galaxy evolution. For example, high-redshift RGs (z approx. greater than 0.7) show evidence for significant populations of young stars, and have optical continuum morphologies nearly always aligned with the radio axis (McCarthy et al. 1987; Chambers et al. 1987). This phenomenon is generally attributed to radio jet induced star formation (DeYoung 1989), but the lack of high S/N spectra of the galaxy continua, and recent detections of polarized light in a few objects make it hard to rule out other processes such as scattering or synchrotron radiation. A detailed study of the continuum light in the distant RGs is difficult as they are optically very faint. However, nearby RGs (z approx. less than 0.1) have bluer B-V colors than radio-quiet ellipticals, presumably due to the presence of young stellar populations (Smith and Heckman 1989) and several have extended UV continuum emitting regions along their radio axes (van Bruegel et al. 1985a, b, di Serego Alighieri et al. 1989), reminiscent of the alignment effect seen in the high redshift RGs. We have almost completed a continuum imaging survey of nearby (and therefore optically brighter), powerful RGs to study any possible relationships between the optical continuum light and radio source activity. In particular we are interested in (1) whether these lower redshift RGs shown any evidence of the alignment effect (in their rest-frame UV light) that is seen in the distant RGs, and (2) the effects that the radio source has on the environment of the host galaxy. Avail: CASI HC A01/MF A04

Energetic emitting regions have traditionally been studied via x-ray, UV and optical emission lines of highly ionized intermediate mass elements. Such lines are often referred to as 'coronal lines' since the ions, when produced by collisional ionization, reach maximum abundance at electron temperatures of approx. 10(exp 5) - 10(exp 6) K typical of the sun's upper atmosphere. However, optical and UV coronal lines are also observed in a wide variety of Galactic and extragalactic sources including the Galactic interstellar medium, nova shells, supernova remnants, galaxies and QSOs. Infrared coronal lines are providing a new window for observation of energetic emitting regions in heavily dust obscured sources such as infrared bright merging galaxies and Seyfert nuclei and new opportunities for model constraints on physical conditions in these sources. Unlike their UV and optical counterparts, infrared coronal lines can be primary coolants of collisionally ionized plasmas with 10(exp 4) less than T(sub e)(K) less than 10(exp 6) which produce little or no optical or shorter wavelength coronal line emission. In addition, they provide a means to probe heavily dust obscured emitting regions which are often inaccessible to optical or UV line studies. In this poster, we provide results from new model calculations to support upcoming Infrared Space Observatory (ISO) and current ground-based observing programs involving infrared coronal emission lines in AGN. We present a complete list of infrared (lambda greater than 1 micron) lines due to transitions within the ground configurations 2s(2)2p(k) and 3s(2)3p(k) (k = 1 to 5) or the first excited configurations 2s2p and 3s3p of highly ionized (x greater than or equal to 100 eV) astrophysically abundant (n(X)/n(H) greater than or equal to 10(exp -6)) elements. Included are approximately 74 lines in ions of O, Ne, Na, Mg, Al, Si, S, Ar, Ca, Fe, and Ni spanning a wavelength range of approximately 1 - 280 microns. We present new results from detailed balance calculations, new critical densities for collisional de-excitation, intrinsic photon rates, branching ratios, and excitation temperatures for the majority of the compiled transitions. The temperature and density parameter space for dominant cooling via infrared coronal lines is presented, and the relationship of infrared to optical coronal lines is discussed. Derived from text

INFLUENCE OF THE ACTIVE NUCLEUS ON THE MULTIPHASE INTERSTELLAR MEDIUM IN NGC 1068

Jonathan Bland-Hawthorn, Jon Weisheit, Gerald Cecil (North Carolina Univ., Chapel Hill.), and James Sokolowski (Space Telescope Science Inst., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 305-306 (For primary document see N93-26706 10-90)

Avail: CASI HC A01/MF A04

The luminous spiral NGC 1068 has now been imaged from x-ray to

radio wavelengths at comparably high resolution (approximately less than 5 in. FWHM). The bolometric luminosity of this well-known Seyfert is shared almost equally between the active nucleus and an extended 'starburst' disk. In an ongoing study, we are investigating the relative importance of the nucleus and the disk in powering the wide range of energetic activity observed throughout the galaxy. Our detailed analysis brings together a wealth of data: ROSAT HRI observations, VLA lambda lambda 6-20 cu cm and OVRO interferometry, lambda lambda 0.4-10.8 micron imaging, and Fabry-Perot spectrophotometry. The identification of distorted radio-loud quasars provides a potentially very powerful tool for basic cosmological studies. If large morphological distortions are correlated with membership of the quasars in rich clusters of galaxies, optical observations can be used to identify rich clusters of galaxies at large redshifts. Hintzen, Ulvestad, and Owen (1983, HUO) undertook a VLA A array snapshot survey at 20 cm of 123 radio-loud quasars, and they found that among triple sources in their sample, 17 percent had radio axes which were bent more than 20 deg and 5 percent were bent more than 40 deg. Their subsequent optical observations showed that excess galaxy densities within 30 arcsec of 6 low-redshift distorted quasars were on average 3 times as great as those around undistorted quasars (Hintzen 1984). At least one of the distorted quasars observed, 3C275.1, apparently lies in the first-ranked galaxy at the center of a rich cluster of galaxies (Hintzen and Romanishin, 1986). Although their sample was small, these results indicated that observations of distorted quasars could be used to identify clusters of galaxies at large redshifts. The purpose of this project is to increase the available sample of distorted quasars to allow optical detection of a significant sample of quasar-associated clusters of galaxies at large redshifts. The evolution of AGN activity in rich clusters of galaxies is found to be approximately 5 times more rapid than that in poor clusters. This rapid evolution may be driven by evolution in the dynamics of galaxy cluster cores. Results from our spectroscopic studies of galaxies associated with quasars are consistent with this scenario, in that bright AGN are preferentially found in regions of lower velocity dispersion. Alternately, the evolution may be driven by formation of a dense intra-cluster medium (ICM). Galaxies close to quasars in rich cluster cores are much bluer (presumably gas rich) than galaxies in the cores of other rich clusters, in support of this model. Author (revised)

FINDING THE RAREST OBJECTS IN THE UNIVERSE: A NEW, EFFICIENT METHOD FOR DISCOVERING BL LACERTAE OBJECTS
John Stocke, Eric Perlman, Arno Granados, Jonathan Schachter (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA.), Martin Elvis (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA.), Meg Urry (Space Telescope Science Inst., Baltimore, MD.), Chris Impey (Arizona Univ., Tucson.), and Paul Smith (Arizona Univ., Tucson.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 311-312 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present a new, efficient method for discovering new BL Lac Objects based upon the results of the Einstein Extended Medium Sensitivity Survey (EMSS). We have found that all x-ray selected BL Lacs are radio emitters, and further, that in a 'color-color' diagram (radio/optical and optical/x-ray) the BL Lac Objects occupy an area distinct from both radio loud quasars and the radio quiet QSOs and Seyferts which dominate x-ray selected samples. After obtaining radio counterparts via VLA 'snapshot' observations of a large sample of unidentified x-ray sources, the list of candidates is reduced. These candidates then can be confirmed with optical spectroscopy and/or polarimetry. Since greater than 70 percent of these sources are expected to be BL Lacs, the optical observations are very efficient. We have tested this method using unidentified sources found in the Einstein Slew Survey. The 162 Slew Survey x-ray source positions were observed with the VLA in a mixed B/C configuration at 6 cm resulting in 60 detections within 1.5 position error circle radii. These x-ray/optical/radio sources were then plotted, and 40 BL Lac candidates were identified. To date, 10 candidates have been spectroscopically observed resulting in 10 new BL Lac objects! Radio flux, optical magnitude, and polarization statistics (obtained in white light with the Steward Observatory 2.3 m CCD polarimeter) for each are given. Author (revised)

IUEAGN: A DATABASE OF ULTRAVIOLET SPECTRA OF ACTIVE GALACTIC NUCLEI
G. Pike, R. Edelson, J. M. Shull (Colorado Univ., Boulder.), and J. Saken (Colorado Univ., Boulder.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 313-314 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

In 13 years of operation, IUE has gathered approximately 5000 spectra of almost 600 Active Galactic Nuclei (AGN). In order to undertake AGN studies which require large amounts of data, we are consistently reducing this entire archive and creating a homogeneous, easy-to-use database. First, the spectra are extracted using the Optimal extraction algorithm. Continuum fluxes are then measured across predefined bands, and line fluxes are measured with a multi-component fit. These results, along with source information such as redshifts and positions, are placed in the IUEAGN relational database. Analysis algorithms, statistical tests, and plotting packages run within the structure, and this flexible database can accommodate future data when they are released. This archival approach has already been used to survey line and continuum variability in six bright Seyfert 1s and rapid continuum variability in 14 blazars. Among the results that could only be obtained using a large archival study is evidence that blazars show a positive correlation between degree of variability and apparent luminosity, while Seyfert 1s show an anti-correlation. This suggests that beaming dominates the ultraviolet properties for blazars, while thermal emission from an accretion disk dominates for Seyfert 1s. Our future plans include a survey of line ratios in Seyfert 1s, to be fitted with photoionization models to test the models and determine the range of temperatures, densities and ionization parameters. We will also include data from IRAS, Einstein, EXOSAT, and ground-based telescopes to measure multi-wavelength correlations and broadband spectral energy distributions. Author (revised)

NARROW BAND IMAGING AND LONG SLIT SPECTROSCOPY OF UGC 5101 Abstract Only
R. M. Stanga, F. Mannucci, and J. M. RodriguezEspinosa (Consejo Superior de Investigaciones Cientificas, La Laguna, Spain.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 317-318 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

UGC 5101 (z = 0.04; D is approximately equal to 240 Mpc) is one of the so called Ultraluminous IRAS sources. Two important properties of the members of this group are their L(sub IR) is greater than or equal to 10(exp 12) solar luminosity, and their space density in the universe up to z is less than 0.1 is equal or even larger than the space density of the quasars. Further noteworthy features of the Ultraluminous IRAS sources are their being morphologically peculiar and the fact that they all seem to host active nuclei in their center. We have observed UGC 5101 in an effort to study the interplay between the gas ionized by the central active nucleus and that gas ionized by other processes which may hold important clues to the understanding of the entire picture of this object. In particular these other ionizing processes could well be massive stars formed recently after the galactic encounter and shocks possibly also related to the galaxy collision. The data that we discuss were obtained between Dec. 1989 and Jan. 1992 with the WHT 4.2 m telescope using the two-arm spectrograph ISIS. Several spectral frames were obtained at three different position angles: PA 84--along the tail of the galaxy; PA 32--along the dust lane; and PA 110. The blue spectra are centered on the H beta line, while the red spectra are centered on the H alpha line. In the configuration we used for the long slit spectra, the spectral scale was 0.74 A per pixel, and the spatial scale was .37 arcsec per pixel; we also observed the H alpha region with a spectral scale of .37 A per pixel, at position angle 84. The narrow band images were obtained at the auxiliary port of ISIS, with a scale of .2 arcsec per pixel, and were centered at the H alpha wavelength, and on the adjacent continuum. The H alpha images and the spectra support the following model. UGC 5101 hosts an active nucleus; the NLR extends up to about 1.5 kpc and shows a complex velocity field, superimposed on the rotation curve of the galaxy. Besides the NLR, in the H alpha image are visible tow bright cones that extend up to 3 kpc along PA 32. The long slit spectra at PA 32 show that the velocity field of the gas in these regions is peculiar, while the ionization structure of the gas is similar to that of the NLR. Author (revised)

LONG SLIT SPECTROSCOPY OF NGC 5506 Abstract Only
R. M. Stanga, R. Maiolino, and J. M. RodriguezEspinosa (Consejo Superior de Investigaciones Cientificas, La Laguna, Spain.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 319 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The galaxy NGC 5506 hosts an active nucleus, that presents characteristics that are intermediate between Sy1 and Sy2. We discuss long slit spectra of NGC 5506 in the ranges 4675-5475 A and 6300-7125 A, that were obtained at three different position angles, in Apr. 1991 at the WHT 4.2 m telescope. The peculiar kinematics of the emitting gas has already been observed by other researchers; following the model proposed by the other researchers, that the emitting gas is located in two cones, we determined the aperture of the cones. The data, moreover, support the hypothesis that the gas is receding from the nucleus. We modelled the intensity and the ratios of the emission lines, and verified that the active nucleus of NGC 5506 can be described as a Sy1 nucleus, with the UV-X source that is partially obscured to our line of sight. On the contrary, a good fraction of the interstellar gas of the galaxy is directly illuminated and photoionized by the central source. Our data show evidence of star formation close to the nucleus; we estimated the star formation rate, that is high with respect to 'normal' spirals, but not high enough to be comparable to star formation rates in a starburst galaxy. Although the exact state of the interstellar medium (ISM) in our Galaxy (other galaxies as well) is not clear at all, the 'common consensus' is that a rough pressure balance (or equipartition of energy) exists between different components and phases: cold, warm, hot phases of the ISM, magnetic field, cosmic rays, etc. If the halo of a galaxy is taken to be an extension of the ISM, then its structure is influenced by various ISM components. A 'complete' description of the halo is evidently very complicated. This paper gives a brief account on cosmic ray halo, which emphasizes the role played by cosmic rays. The interaction between cosmic rays and thermal plasma is facilitated by magnetic field. The cosmic rays are scattered by hydromagnetic waves (e.g., Alfven waves) which in turn can be generated by cosmic ray streaming instability. This constitutes a self-consistent picture. Since we are interested in the structure of the halo, we adopted a hydrodynamic model in which the cosmic rays and waves are described by their pressures. In general there are two classes of halos: static and dynamic. Author (revised)

TURBULENT MIXING LAYERS IN THE INTERSTELLAR MEDIUM OF GALAXIES
J. D. Slavin, J. M. Shull, and M. C. Begelman *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 322-323 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We propose that turbulent mixing layers are common in the interstellar medium (ISM). Injection of kinetic energy into the ISM by supernovae and stellar winds, in combination with density and temperature inhomogeneities, results in shear flows. Such flows will become turbulent due to the high Reynolds number (low viscosity) of the ISM plasma. These turbulent boundary layers will be particularly interesting where the shear flow occurs at boundaries of hot (approximately 10(exp 6) K) and cold or warm (10(exp 2) - 10(exp 4) K) gas. Mixing will occur in such layers producing intermediate-temperature gas at T is approximately equal to 10(exp 5.0) - 10(exp 5.5) that radiates strongly in the optical, ultraviolet, and EUV. We have modeled these layers under the assumptions of rapid mixing down to the atomic level and steady flow. By including the effects of non-equilibrium ionization and self-photoionization of the gas as it cools after mixing, we predict the intensities of numerous optical, infrared, and ultraviolet emission lines, as well as absorption column densities of C 4, N 5, Si 4, and O 6. THE FORMATION OF LOW-IONIZATION EMISSION IN THE HALO OF NGC 891
James Sokolowski and Jonathan Bland-Hawthorn (Rice Univ., Houston, TX.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 324-325 (For primary document see N93-26706 10-90)

Imaging and Spectroscopic study first revealed the presence of a diffuse ionized medium (DIM), having unusual excitation, pervading the lower halo of the edge-on spiral galaxy NGC 891. Emission from this DIM is strongest northeast of the nucleus, at radii between 2 and 8 kpc (hereafter region 1). The (N2)(lambda)6583/H(alpha) and (S2)(lambda)(lambda)6716,6731/H(alpha) ratios increase dramatically with z in region 1, from 0.6 and 0.5 respectively at z is approximately equal to 500 pc to 1.1 and 1.0 at z is approximately equal to 1 kpc, while nondetections of (O1)(lambda)6300 and (O3)(lambda)5007 emission yield upper limits of (O1)(lambda)6300/H(alpha) less than or equal to 0.05 and (O3)(lambda)5007/H(alpha) less than or equal to 0.15 for z less than 1 kpc. Previous photoionization models, using the radiation field from disk O and B stars, have been successful in reproducing the elevated (N2)(lambda)6583/H(alpha) and (S2)(lambda)(lambda)6716.6731/H(alpha) ratios observed. However, these radiation bounded models also produce significant (O3)(lambda)5007 emission, in conflict with the observed upper limit. Here, we report the results of new, matter bounded models for the photoionization of the DIM in region 1 of NGC 891. Author (revised)

We are studying the disk-halo interface in several edge-on spiral galaxies through extensive imagery in H(alpha) and other emission lines from Diffuse Ionized Gas (DIG), also referred to as the Warm Ionized Medium (WIM). In addition, for the nearby Sc galaxy NGC4631 we have obtained x-ray observations with ROSAT, to map the distribution of hot (10(exp 6) - 10(exp 7)) gas in the disk and halo. Here we present initial results for two late-type spirals, NGC4244 and NGC4631. Author (revised)

Avail: CASI HC A01/MF A04

We have been developing detailed hydrodynamic models of the global interstellar medium in the hope of understanding the mass and volume occupied by various phases, as well as their structure and kinematics. In our model, the gas is modeled by one fluid while representative Pop 1 stars are modeled by a second fluid. The two fluids are coupled in that the gas forms into stars at a rate given by a Schmidt law while stellar mass loss returns matter into the gas phase (on a time scale of 100 Myr). Also, the stars heat the gas through stellar winds and the gas cools through optically thin radiation. The time behavior of these two fluids is studied in two spatial dimensions with the Eulerian finite difference numerical hydrodynamic code Zen. The two spatial dimensions are along the plane of a disk (x, total length of 2 kpc) and perpendicular to the disk (z, total height of +/- 15 kpc) and a galactic gravitational field in the z direction, typical of that at the solar circle, is imposed upon the simulation; self-gravity and rotation are absent. For the boundary conditions, outflow is permitted at the top and bottom of the grid (z = +/- 15 kpc) while periodic boundary conditions are imposed upon left and right sides of the grid. As initial conditions, we assumed a gaseous distribution like that seen for the H1 by earlier researchers, although the results are insensitive to the initial conditions. We have run simulations in which the heating due to stars, parameterized as a stellar wind velocity, a, is varied from low (a = 150 km/s), to intermediate (a = 300 km/s), to high (a = 600 km/s). Since the intermediate case is roughly equivalent to the Galactic energy injection rate from supernovae, this summary will concentrate on results from this simulation. Author (revised)

THE VERTICAL DISK STRUCTURE OF THE EDGE-ON SPIRAL GALAXY NGC 3079
S. Veilleux, Jonathan Bland-Hawthorn (Rice Univ., Houston, TX.), G. Cecil (North Carolina Univ., Chapel Hill.), and R. B. Tully *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 330-331 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

NGC 3079 is an edge-on SB(s)c galaxy at a redshift of 1225 km/s relative to the Local Group. Earlier researchers found a spectacular 'figure-eight' radio structure aligned along the minor axis of the galaxy, centered on the nucleus, and extending 3 kpc above and below the plane. The geometry of this structure and the evidence of unusually high nuclear gas velocities suggest that a wind-type outflow from the nucleus is taking place. The disk of NGC 3079 is also remarkable: it is extremely rich in H 2 regions and is the only unambiguous example of a galaxy outside M31 and our own Galaxy to exhibit 'Heiles-like' shells. Other researchers have also identified a nebulosity with a ragged X-shaped morphology formed by a system of lumpy filaments with individual lengths of 3 - 5 kpc. They suggest that this material is ambient halo gas entrained into the boundary layers of the nuclear outflow. The complex structure of the line emission in NGC 3079 makes this object an ideal target for an imaging spectroscopic study. The present paper reports the preliminary results of such a study. THE RING AROUND SN1987A
Crystal L. Martin and David Arnett *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 332-333 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Stars in the 9-40 solar mass range play a prominent role in the hydrodynamical and chemical evolution of galaxies. Their stellar winds and supernova explosions are believed to create the hot component of the interstellar medium (ISM). In some galactic disks, the kiloparsec sized super bubbles formed around clusters of massive stars may blow out of the disk plane and release hot, metal enriched gas into the galaxy's halo. Additionally, the expanding shock front of a super bubble in the disk may trigger additional star formation. Furthermore, similar processes probably drive the galactic winds associated with star burst nuclei that enrich the intracluster and intergalactic mediums. Nonetheless, the explosion of a blue super giant in the Large Magellanic Cloud (LMC), SN1987A, illuminated the incompleteness of our understanding of massive stars. Evolutionary models of massive stars do not synthesize the observed super giant populations in either the Milky Way or LMC. Our modeling of the formation of SN1987A's ring will improve our knowledge of both the post-main-sequence evolution of massive stars and their coupling to the ISM in galaxies. Author (revised)

A HALO AND A BLOW-OUT IN NGC 253
C. L. Carilli, M. A. Holdaway, and P. T. P. Ho (National Radio Astronomy Observatory, Socorro, NM.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 334-335 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We present the discovery of a 'synchrotron halo' in NGC 253. NGC 253 is an inclined, dusty, barred Sc galaxy in the Sculptor Group. It is also one of the prototype nuclear star burst galaxies. Very Large Array observations at 327 MHz and 1.4 GHz have revealed a synchrotron emitting 'halo' extending 9 kpc above and below the plane of NGC 253 (assuming a distance of 4 Mpc). The spectral index for the radio emission steepens from -0.7 in the disk to -1.0 in the halo. The fractional polarization at 1.4 GHz increases from less than or equal to 2 percent in the disk up to 20 percent in the halo, and the magnetic field vectors project parallel to the plane over most of the halo. INFRARED FINE-STRUCTURE LINE DIAGNOSTICS OF SHROUDED ACTIVE GALACTIC NUCLEI
G. M. Voit *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 336-337 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Far-infrared spectroscopy of celestial objects will improve dramatically in the coming decade, allowing astronomers to use fine-structure line emission to probe photoionized regions obscured in the optical band by thick clouds of dust. The ultraluminous far-IR galaxies revealed by IRAS, quasar-like in luminosity but smothered in molecular gas, probably conceal either immense starbursts or luminous active nuclei. In both scenarios, these objects ought to produce copious infrared fine-structure emission with several lines comparable to H(beta) in luminosity. This paper shows how these lines, if detected, can be used to determine the electron densities and far-IR obscurations of shrouded photoionized regions and to constrain the shape and ionization parameter of the ionizing spectra. The presence of (Ne V) emission in particular will distinguish shrouded AGN's from shrouded starbursts. Since all active galaxies photoionize at least some surrounding material, these diagnostics can also be applied to active galaxies in general and will aid in studying how an active nucleus interacts with the interstellar medium of its host galaxy. THE ABSORPTION AND EMISSION SPECTRUM OF RADIATIVE COOLING GALACTIC FOUNTAIN GAS
Robert A. Benjamin and Paul R. Shapiro *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 338 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have calculated the time-dependent, nonequilibrium thermal and ionization history of gas cooling radiatively from 10(exp 6) K in a one-dimensional, planar, steady-state flow model of the galactic fountain, including the effects of radiative transfer. Our previous optically thin calculations explored the effects of photoionization on such a flow and demonstrated that self-ionization was sufficient to cause the flow to match the observed galactic halo column densities of C 4, Si 4, and N 5 and UV emission from C 4 and O 3 in the constant density (isochoric) limit, which corresponded to cooling regions homogeneous on scales D less than or approximately equal to 1 kpc. Our new calculations which take full account of radiative transfer confirm the importance of self-ionization in enabling such a flow to match the data but allow a much larger range for cooling region sizes, i.e. D(sub 0) greater than or approximately equal to 15 pc. For an initial flow velocity v(sub 0) approximately equal to 100 km/s, comparable to the sound speed of a 10(exp 6) K gas, the initial density is found to be n(sub h,0) is approximately 2 x 10(exp -2) cm(exp -3), in reasonable agreement with other observation estimates, and D(sub 0) is approximately equal to 40 pc. We also compare predicted H(alpha) fluxes, UV line emission, and broadband x-ray fluxes with observed values. One dimensional numerical hydrodynamical calculations including the effects of radiative cooling are also presented. Author (revised)

REMOVING MALMQUIST BIAS FROM LINEAR REGRESSIONS c64
Frances Verter *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 339-340 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Malmquist bias is present in all astronomical surveys where sources are observed above an apparent brightness threshold. Those sources which can be detected at progressively larger distances are progressively more limited to the intrinsically luminous portion of the true distribution. This bias does not distort any of the measurements, but distorts the sample composition. We have developed the first treatment to correct for Malmquist bias in linear regressions of astronomical data. A demonstration of the corrected linear regression that is computed in four steps is presented. Author (revised)

A NEW GIANT LUMINOUS ARC GRAVITATIONAL LENS ASSOCIATED WITH A z = 0.62 GALAXY CLUSTER, AND THE ENVIRONMENTS OF DISTANT RADIO GALAXIES
Mark Dickinson *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 341 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

In the course of a survey investigating the cluster environments of distant 3CR radio galaxies, I have identified a previously unknown 'giant luminous arc' gravitational lens. The lensing cluster is associated with the radio galaxy 3C 220.1 at z = 0.62 and is the most distant cluster now known to produce such arcs. I present imaging and spectroscopic observations of the cluster and the arc, and discuss the implications for the cluster mass. At z greater than 0.6 the cluster velocity dispersions implied by such giant arcs may provide an interesting constraint on theories of large scale structure formation. The parent investigation in which this arc was identified concerns galaxy clusters and radio galaxy environments at 0.35 less than z less than 0.8. At the present epoch, powerful FR 2 radio galaxies tend to be found in environments of poor or average galaxy density. In contrast, at the higher redshifts investigated here, richer group and cluster environments are common. I present additional data on other clusters from this survey, and discuss its extension to z greater than 1 through a program of near-infrared and optical imaging. Author (revised)

EMISSION LINE GAS IN EARLY-TYPE GALAXIES: KINEMATICS AND PHYSICAL CONDITIONS
S. E. Deustua (Lawrence Livermore National Lab., CA.), A. P. Koratkar (Space Telescope Science Inst., Baltimore, MD.), and G. MacAlpine (Michigan Univ., Ann Arbor.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 342 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Recent studies have found line emission gas in nearby early-type galaxies, but the properties of the emission-line gas in these 'normal' galaxies remain enigmatic. In terms of activity in the nucleus, these LINER-like galaxies form an important link between giant H 2 region galaxies and low-luminosity Seyferts. Despite their large numbers and evolutionary significance, we do not know whether these galaxies form a homogeneous class of objects; nor do we know how the distribution and kinematics of the line emission gas are affected by the host galaxy's environment or by the properties of the central engine, if present. To address these issues we are conducting a magnitude and volume limited survey of nearby early-type galaxies at Lick Observatory and the Michigan-Dartmouth-MIT Observatory. We have selected approximately 100 galaxies from radio catalogs. A large sample is necessary because while studies of individual 'LINERS' have led to a certain understanding of the phenomenon, these studies have not provided a global framework. Here we present results from our first run of medium resolution (approximately 5 A FWHM) spectroscopy. Kinematic data and line ratios determined along the major and minor axes of 6 galaxies are discussed. The information gleaned from spectroscopic data, when combined with data at other wavelengths, will enable a thorough investigation into the nature of low luminosity nuclear activity. LOW REDSHIFT STAR-FORMING GALAXIES: WHAT CAN THEY TEACH US ABOUT PRIMEVAL GALAXIES?
D. Calzetti (European Space Agency, Paris, France.) and A. L. Kinney *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 343-344 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The analysis of the UV plus optical spectra of three star-forming galaxies, Mrk 496, Mrk 357, TOL1924-416, obtained by matching the size of the optical aperture with that of IUE, has given unexpected results. These can be summarized as follows: (1) the dereddened Ly(alpha)/H(beta) ratios are consistent with the prediction of case B recombination for nebular emission, within the uncertainties; (2) the decrease of the Ly(alpha)/H(beta) ratio with increasing metallicities is not confirmed in our three objects, although the sample is too small to consider this result definitive. The first result is surprising, mainly because at least the two Markarian galaxies have a large enough H1 content to markedly increase the optical depth for the Ly(alpha) photons and to trigger their absorption by dust. This finding can probably be explained as an effect of the inhomogeneous distribution of gas and dust within the galaxies. On the basis of these results, we conclude that the detection of the Ly(alpha) emission line in searching for primeval galaxies (PG's) can be still considered a valid technique. Author (revised)

Carbon is the fourth most abundant element in the Galaxy with an abundance of approximately 4 x 10(exp -4) relative to hydrogen. Of all abundant metals it is the easiest to observe in the interstellar medium (ISM). Carbon can be found in four dominant forms: dust grains, C 2, C 1, and CO. The latter is the most abundant molecule (next to H2) in molecular clouds. All three gas-phase forms produce strong sub-mm wavelength emission lines and are the principal tracers of the warm and dense neutral

phases of the ISM. We calculate the gas-phase abundances of neutral carbon (C 1), ionized carbon (C 2), and carbon monoxide (CO) as a function of cosmic time or redshift z in an idealized scenario of galactic evolution. Author (revised)

A SYSTEMATIC INVESTIGATION OF EDGE-ON STARBURST GALAXIES: EVIDENCE FOR SUPERNOVA-DRIVEN SUPERWINDS
Matthew D. Lehnert (Johns Hopkins Univ., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 349 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We are completing a project designed to realistically assess the global/cosmological significance of superwinds by attempting to systematize our understanding of them (determine their incidence rate and the dependence of their properties on the star-formation that drives them). Specifically, we are analyzing data from an optical spectroscopic and narrow-band imaging survey of an infrared flux-limited sample of about 50 starburst galaxies whose stellar disks are viewed nearly edge-on. This edge-on orientation is crucial because the relevant properties of the superwind can be far more easily measured when the flow is seen in isolation against the sky rather than projected onto the much brighter gas associated with the starburst galaxy itself. AUTOMATA NETWORK MODELS OF GALAXY EVOLUTION
David Chappell and John Scalo *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 350-351 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Two ideas appear frequently in theories of star formation and galaxy evolution: (1) star formation is nonlocally excitatory, stimulating star formation in neighboring regions by propagation of a dense fragmenting shell or the compression of preexisting clouds; and (2) star formation is nonlocally inhibitory, making H2 regions and explosions which can create low-density and/or high temperature regions and increase the macroscopic velocity dispersion of the cloudy gas. Since it is not possible, given the present state of hydrodynamic modeling, to estimate whether one of these effects greatly dominates the other, it is of interest to investigate the predicted spatial pattern of star formation and its temporal behavior in simple models which incorporate both effects in a controlled manner. The present work presents preliminary results of such a study which is based on lattice galaxy models with various types of nonlocal inhibitory and excitatory couplings of the local SFR to the gas density, temperature, and velocity field meant to model a number of theoretical suggestions.

CAN CLUSTER ENVIRONMENT MODIFY THE DYNAMICAL EVOLUTION OF SPIRAL GALAXIES?
P. Amram, C. Balkowski (Observatoire de Paris-Meudon, France.), V. Cayatte (Observatoire de Paris-Meudon, France.), M. Marcelin, and W. T. Sullivan, III (Washington Univ., Seattle.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 355-356 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Over the past decade many effects of the cluster environment on member galaxies have been established. These effects are manifest in the amount and distribution of gas in cluster spirals, the luminosity and light distributions within galaxies, and the segregation of morphological types. All these effects could indicate a specific dynamical evolution for galaxies in clusters. Nevertheless, a more direct evidence, such as a different mass distribution for spiral galaxies in clusters and in the field, is not yet clearly established. Indeed, Rubin, Whitmore, and Ford (1988) and Whitmore, Forbes, and Rubin (1988) (referred to as RWF) presented evidence that inner cluster spirals have falling rotation curves, unlike those of outer cluster spirals or the great majority of field spirals. If falling rotation curves exist in centers of clusters, as argued by RWF, it would suggest that dark matter halos were absent from cluster spirals, either because the halos had become stripped by interactions with other galaxies or with an intracluster medium, or because the halos had never formed in the first place. Even if they didn't disagree with RWF, other researchers pointed out that the behaviour of the slope of the rotation curves of spiral galaxies (in Virgo) is not so clear. Amram, using a different sample of spiral galaxies in clusters, found only 10% of declining rotation curves (2 declining vs 17 flat or rising) in opposition to RWF who find about 40% of declining rotation curves in their sample (6 declining vs 10 flat or rising), we will hereafter briefly discuss the Amram data paper and compare it to the results of RWF. We have measured the rotation curves for a sample of 21 spiral galaxies in 5 nearby clusters. These rotation curves have been constructed from detailed two-dimensional maps of each galaxy's velocity field as traced by emission from the Ha line. This complete mapping, combined with the sensitivity of our CFHT 3.60 m. + Perot-Fabry + CCD observations, allows the construction of high-quality rotation curves. Details concerning the acquisition and reduction procedures of the data are given in Amram. We present and discuss our preliminary analysis and compare them with RWF's results. Author (revised)

Ly ALPHA AND IR GALAXY COMPANIONS OF HIGH REDSHIFT DAMPED Ly ALPHA QSO ABSORBERS
Adeline Caulet and Mark McCaughrean (Arizona Univ., Tucson.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 359-360 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have used a Near-Infrared Camera and Multi-Object Spectrometer (NICMOS3) HgCdTe 256x256 array detector with the Infrared (IR) camera on the 2.3m telescope at Steward Observatory to image several Quasi-Stellar Object (QSO) fields. The limiting magnitude is K'(2.1 microns) = 21.0 - 21.5 mag per square arcsec for a 3 sigma detection in 3 hours of in-field chopping observations. Each QSO line-of-sight samples several known absorbers with Mg2(lambda)2796-2803 A and/or C4(lambda)1548-1551 A absorption doublets. The equivalent width distributions of the low and high ionization absorption lines of the absorber sample are identical to those of the parent population of all absorbers. This selection process, used already for a spectroscopic survey of Mg2 absorption lines in C4-selected absorption systems at high z, gives a methodical approach to observing, reduces the observer biases, and makes a more efficient use of telescope time. This selection guarantees that imaging of the sample of QSO fields will provide complete sampling of the whole population of high z QSO absorbers. Follow-up optical and IR spectroscopy of these objects is scheduled for redshift measurement and confirmation of the absorbing galaxies and the cluster members. Author (revised)

CENTRAL STAR FORMATION IN EARLY-TYPE GALAXIES: IMAGES AND IMPLICATIONS
L. L. Dressel and J. S. Gallagher, III (Wisconsin Univ., Madison.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 361-362 (For primary document see N93-26706 10-90)
(Grant NAG5-1630)
Avail: CASI HC A01/MF A04

We are reporting on an on-going study of strong central star-bursts in early type galaxies. These galaxies are brighter than m(pg) = 14.5 and are classified as type SO, SO/a, or Sa in the Uppsala General Catalog. All of them have unusually warm, bright far infrared sources for early-type galaxies, with F(100 microns)/F(60 microns) less than 2.0 and F(60 microns) greater than 2.5 Jy. Much of the infrared emission comes from the central few arcsec. Most of the galaxies were detected at 2380 MHz at Arecibo, with flux densities between 15 and 33 mJy. They have diffuse radio sources with a variety of morphologies, typically a few kpc in extent. Long slit spectra through the nucleus show that all have Balmer absorption lines, signifying a large B or A star population, and (O2) 3727 and Balmer emission lines, consistent with ionization by hot young stars. We have made optical continuum and emission line images of the galaxies to use in combination with the above data to study the causes and evolution of strong central star-bursts in early-type disk systems. PROBING THE OPTICAL DEPTH OF SPIRAL GALAXIES USING MULTI-WAVEBAND OBSERVATIONS Thesis
Rhodri Evans *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 363-364 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

The questions of the optical depth and extinction of galaxies obviously have far-reaching implications; from determining the true stellar content and baryonic mass of galaxies to the origin of the major component of their far infrared radiation. We have investigated whether the reddening of stars can be used to determine the amount and extent of obscuring dust. We find that the amount of reddening is very sensitive to the assumed geometry. The usually assumed case of a screen of dust between the observer and the star produces, for a given optical depth, the maximum amount of reddening. However, for external galaxies such a geometry is clearly wrong. More realistic geometries where the dust and stars are uniformly mixed (a 'slab') or where the dust is sandwiched by unobscured stars (a 'sandwich') produce significantly less reddening. For the slab geometry of the reddening rises to a maximum value as the optical depth is increased, and for a sandwich geometry the reddening will actually decrease as the optical depth becomes larger. The reddening vectors produced by these realistic geometries are compared to multi-waveband observations of individual regions of a sample of eight galaxies. We find evidence for significant optical depths in the central regions of some of these galaxies, but optical depths of less than unity at approx. 2 scale lengths from the centers. The optical depths derived are in good agreement with other tests such as the measured hydrogen column densities and the far infrared to blue light ratios. However, whereas these two latter approaches are insensitive to the relative distributions of the stars and the dust, the amount of reddening seen in these eight galaxies suggests that the dust to stellar scale height ratio xi is greater than or equal to 0.5. We find typical blue band extinctions of A(sub B) = 0.75-1.0, a factor of 3-4 higher than the RC2 value. Author (revised)

We examine the response of self-gravitating primary galaxies consisting of dark matter halos and disks containing both stars and gas to collisions with less massive companions. The primaries were constructed using a technique which makes it possible to realize multi-component systems that are stable and virtually in precise equilibrium. A total of 65,536 particles were employed to represent the primary and 4096 to represent the companion. Half the particles in the primary comprise its halo and the other half its disk. Gas makes up 10 percent of the disk mass and is represented by 8192 of the disk particles. A system of units is used where the gravitational constant, total disk mass, and disk exponential scale length are unity. The primary motivation of the present study is to determine whether effects associated with dissipation and self-gravity can account for the unusual morphology of the Cartwheel galaxy.

We present observations of the neutral hydrogen, ionized hydrogen, and starlight of galaxies chosen from the 'Toomre Sequence' of merging galaxies. This sequence is meant to represent the progressive stages of the merger of two disk galaxies into a single elliptical-like remnant. The galaxies in this study span the full range of this sequence. The stars and atomic gas are very differently distributed, with the stars more widely distributed at early stages, and the gas much more widely distributed at later stages. Large quantities of neutral gas are sent to large radii (greater than or approximately equal to 100 h(exp -1) kpc), and still persist even after the central remnant has relaxed to an r(sup 1/4) light profile. There are a few times 10(exp 9) solar masses h(exp -2) of both molecular and atomic gas in each of these systems. Throughout the different stages, about half of the total gas mass lies within the galaxies' optical bodies. The fraction of this mass that is in neutral hydrogen drops rapidly in the later stage mergers, suggesting that atomic gas is processed into molecular gas, stars, and hot gas during the merger and resulting starburst. Star formation occurs at all stages of the interaction, both within the tails and in the central bodies. In the early stages, the H(alpha) shows many arcs and plumes. In the late stages, there are large H 2 regions in the tails which are associated with large quantities of neutral hydrogen. There is always a very good correlation between optical, H(alpha), and H1 peaks, with N(sub H1) greater than or approximately equal 3 x 10(exp 20) cm(exp -2) at the location of the H2 regions in the tails. THE ISM IN THE M82 STARBURST Abstract Only
Steven Lord *In its* The Evolution of Galaxies and Their Environment Jan. 1993 p 370-371 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

We have observed (O 1) (63 microns) and (Si 2) (35 microns) in the central 700 pc of the starburst galaxy M82. The luminosities in these transitions are 7.1 x 10(exp 7) solar luminosity and 6.2 x 10(exp 7) solar luminosity, respectively, which are each approx. 0.15% of the bolometric luminosity from this region. The ratios of (O 1) line luminosity to (O 3), (Si 2) (35 microns), and to bolometric luminosities in M82 are similar to those in M42, M17, and Sgr A. These similarities, and the association of the bulk of the (O 1) and (Si 2) emission with the ionized emission, suggest that the dominant emission mechanism for (O 1) and (Si 2) in M82 is the same as in these Galactic regions, namely warm gas photodissociated by UV flux from the OB stars responsible for the nearby H 2 regions. We argue that shock or x ray heated gas or H 2 plasma is a minor contributor to the intensities of these fine structure lines. Both the (O 1) (53 microns) and the (Si 2) (35 microns) spectrum show an asymmetric line profile indistinguishable in shape from those of the (O 3) (52 and 88 microns) and (N 3) (57 microns) lines and similar to that of the more extended (C 2) 158 micron line measured previously in M82. We detect two distinct velocity components, which we attribute to emission from two regions at either end of the central bar, where the bar connects to an orbiting torus of neutral gas seen in H 1 and CO J = 1-0. We model separately the two velocity components and derive the physical conditions in these two regions. The clouds in these regions are small, R approx. 1-2 pc, have warm neutral gas surfaces, T approx. 200 K, and are concentrated with

volume filling factors of approx. 0.02 and area filling factors of 1-5. The entire central region (R approx. 700 pc) is characterized by a large number, approx. 5 x 10(exp 4), of 2 x 10(exp 3) solar mass clouds with surface densities of approx. 3 x 10(exp 4) cm(exp -3), illuminated by FUV fluxes 10(exp 4) times the average local interstellar value for the Milky Way. These clouds reside in the harsh conditions of a starburst nucleus, with photoevaporation times of 10(exp 6) yr, and collision timescales only about an order of magnitude longer. Author (revised)

DYNAMICS OF THE BARYONIC COMPONENT IN HIERARCHICAL CLUSTERING UNIVERSES
Julio Navarro *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 372-373 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

I present self-consistent 3-D simulations of the formation of virialized systems containing both gas and dark matter in a flat universe. A fully Lagrangian code based on the Smoothed Particle Hydrodynamics technique and a tree data structure has been used to evolve regions of comoving radius 2-3 Mpc. Tidal effects are included by coarse-sampling the density of the outer regions up to a radius approx. 20 Mpc. Initial conditions are set at high redshift (z greater than 7) using a standard Cold Dark Matter perturbation spectrum and a baryon mass fraction of 10 percent (omega(sub b) = 0.1). Simulations in which the gas evolves either adiabatically or radiates energy at a rate determined locally by its cooling function were performed. This allows us to investigate with the same set of simulations the importance of radiative losses in the formation of galaxies and the equilibrium structure of virialized systems where cooling is very inefficient. In the absence of radiative losses, the simulations can be rescaled to the density and radius typical of galaxy clusters. A summary of the main results is presented. Author (revised)

THE EFFECTS OF FLARING IN H1 ON THE OBSERVED VELOCITY FIELD OF SPIRALS
Rob Olling and J. H. vanGorkom *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 374-376 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

This work is part of a larger project in which we want to determine the shapes of dark halos around spiral galaxies. Rotation curves 'probe' the halos in the radial direction. The derived halo mass distributions are badly constrained. The local halo densities fully determine the width of the gas distribution once the gaseous velocity dispersion is known. There where the dark halo dominates, the Full Width at Half Maximum (FWHM) of the gas layer is proportional to (rho(sub halo))(exp -0.5). Therefore, measuring the width of the gas layer probes the halo density directly. In a dark halo dominated potential, the FWHM of the gas layer increases linearly with radius. This increase of the thickness of the gas layer is known as 'flaring'. Flaring has been found inside the stellar disk. Beyond the edge of the stellar disk, the analysis is hampered by the onset of the warp. Since the galaxy we are studying, NGC 4244, has no significant warp we hope to extend Rupen's analysis into the halo dominated regime. The usual method to derive a rotation curve from an observed 2-dimensional velocity field is to assume that the hydrogen is distributed in infinitely thin rings. For a flaring disk, any line of sight samples many different parts of the galaxy, all having different densities and projected velocities. In order to fully exploit the information contained in the gas distribution, we have to understand the effects of flaring on the observables (the spectrum for each point of the galaxy). We have investigated the effects of a flaring disk on the observed velocity field. It is obvious that the largest (kinematical) effects are to be expected for low density dark halos at large inclinations. For low mass galaxies we expect that the flaring of the H1 layer will have a major effect on the observed kinematics. For galaxy with intermediate V(sub max,halo) seen at intermediate inclinations, one overestimates Vsin(i) typically by a few percent. For more massive galaxies, any effects arising from the flaring H1 layer are minuscule unless the inclination is not too far from 90 deg. Author (revised)

THE LYMAN ALPHA FOREST OF THE HIGH-z QUASAR 0000-263
Bryan Penprase, Roberto Gilmozzi (Space Telescope Science Inst., Baltimore, MD.), David Bowen (Space Telescope Science Inst., Baltimore, MD.), and Piero Madau (Space Telescope Science Inst., Baltimore, MD.) *In* NASA. Ames Research Center, The Evolution of Galaxies and Their Environment Jan. 1993 p 377-378 (For primary document see N93-26706 10-90)
Avail: CASI HC A01/MF A04

Medium-resolution (delta(v) = 45 km/s) optical spectra of the bright, high-redshift (z = 4.1) quasar 0000-263 taken at the ESO 3.5-m NTT telescope were analyzed to determine the distribution of column densities, velocities and line widths of the Lyman-alpha forest absorption components. The values of NH, b, and z were determined by fitting Voigt profiles to the lines, and convolving with a Gaussian instrumental response function. Over 350 components with log N(sub H) greater than 13.2 were identified. An analysis of the dependence of the number of components with z reveals that the number evolution of components obeys the power law dN/dz varies as (1+z)(sup gamma), where gamma = 0.5 +/- 0.4 for the sample of 182 lines with log N(sub H) greater than 14.0. The distribution of component strengths is found to obey f(N(sub H)) varies as N(sub h)(sup -beta), where beta = -1.55 for components with log(N(sub H)) is greater than 14.7, and beta = -0.68 for the components with log(N(sub H)) greater than 13.5. A distinct break in the f(N(sub H)) histogram is also observed, at log(N(sub H)) is approximately 14.7. The results are briefly considered in the context of theoretical models of quasar Lyman alpha clouds and their evolution. Author (revised)

The original Revised Shapley-Ames (RSA) galaxy sample of almost 1300 galaxies has been augmented with further bright galaxies from the RSA appendix as well as newer galaxy catalogs. A complete and homogeneous, strictly magnitude-limited all-sky sample of 2345 galaxies brighter than 13.4 in apparent blue magnitude was formed. New 21 cm H1 line observations for more than 600 RSA galaxies have been combined with all previously available H1 data from the literature. This new extentise data act allows detailed tests of widely accepted 'standard' reduction and analysis techniques. Author (revised)

The evolution of interstellar molecular hydrogen was studied, with a special interest for the formation and evolution of molecular clouds and star formation within them, by a two-dimensional hydrodynamical simulation performed on a rectangular grid of physical sizes on the order of 100 pc. It is filled with an initial density of approx. 1 cm(exp -3), except for one cell (approx. 1 pc(exp 2)) at the center of the grid where an accretion core of 1-10(exp 3) solar masses is placed. The grid is co-moving with the gridcenter that is on a circular orbit around the Galactic center and that also is the guiding center of epicyclic approximation of orbits of the matter surrounding it. The initial radial velocity is zero; to account for differential rotation the initial tangential velocity (i.e. the movement around the galactic center) is proportional to the radial distance to the grid center. The rate is comparable to the rotation rate at the Local Standard of Rest. The influence of galactic rotation is noticed by spiral or elliptical forms, but on much longer time scales than self gravitation and cooling processes. Density and temperature are kept constant at the boundaries and no inflow is allowed along the tangential boundaries. Author (revised)

NGC 253 is a prototypical moderate nuclear starburst galaxy. It is a barred SBc spiral galaxy at a distance of approximately 3 Mpc and can be studied on scales down to 15 pc in the optical and near IR. It is a bright IRAS source with a flux of 1000 Jy at 60 microns and a FIR luminosity of 3 x 10(exp 10) solar luminosity. It has a strong Br(gamma) emission line, a signature of ongoing massive star formation and deep CO absorption bands, which are indicative of the dominance of red supergiants in the near IR. It contains a population of compact radio sources, similar to those seen in M82. Optical spectra show that the nucleus is heavily reddened, with a Balmer decrement of approximately 30. NGC 253 possesses a 'superwind,' seen both in x-ray emission and in optical line emission. Nuclear ejection was first suggested to explain the kinematics of the nuclear region. We have obtained J, H, and K images of the entire galaxy at 1.3 arcsec/pixel (18 pc/pixel) using the superconducting quantum interference device (SQUID) on the KPNO 1.3 m. We have constructed a mosaic of 180 s exposures which traces the galaxy over much of its optical extent. The data were shifted, rotated, magnified, and calibrated following normal practice. Avail: CASI HC A01/MF A04

Centaurus A (NGC 5128) is a nearby (3 Mpc) elliptical galaxy with a prominent dust lane, extensive radio lobes, and a compact radio continuum source, suggestive of nuclear activity. As a consequence of its peculiar morphology, this merger candidate has been the subject of much attention, particularly at optical wavelengths. Unfortunately the high and patchy extinction in the disk, aggravated by the warped structure of the dust lane, has severely hindered investigations into the properties of the interstellar medium, particularly with regard to the extent of star formation. Here we present a map of the C-12(O) J = 2-1 line throughout the dust lane which, when combined with a previously measured C-12(O) J = 1-0 map and data on molecular absorption lines observed against the compact non-thermal continuum source, offers insight into the excitation conditions of the molecular gas. A major effort was expended in developing procedures for calculating by quantum-mechanical methods the cross sections for the photodissociation of the hydroxyl radical OH. The molecule OH is the primary dissociation product of water and observations of OH when combined with a determination of the lifetime of OH in the solar radiation field can be used to calculate the rate of release of water from comets. There are many possible photodissociation channels whose efficiency depends upon the details of the spectrum of the radiation. We have calculated the potential energy curves of all the states of OH that can be reached by electric dipole absorption from the ground X(exp 2)(Pi) state by photons with energies up to about 12 eV. THE GALACTIC CENTER STELLAR POPULATION IN THE NEAR INFRARED Ph.D. Thesis
Joseph William Haller 1992 179 p
Avail: Univ. Microfilms Order No. DA9307651

Near infrared photometry is presented for 659 stars within 2.5 of the Galactic Center from three epochs of 2.2 microns and one epoch of 1.6 microns observations. The data were taken with a Rockwell 64 x 64 HgCdTe IR array at the Steward Observatory 1.6m telescope and are complete to m (sub k) = 11.0. Additional photometry at 3.4 microns for a subsample of 258 stars taken with a 58 x 62 InSb array at CTIO is also included. The sample has an average (H-K)(sub obs) which is consistent with a late-type population with (H-K)(sub 0) = 0.3 and A(sub V) = 31.8 mag and luminosities several magnitudes brighter than the Baade's Window AGB. A variability analysis shows 59 stars are long period variable candidates at the 3-sigma level. These stars show correlations in (H-K)(sub 0) vs. (K-L)(sub 0) and (K-L)(sub 0) vs. delta-m(sub k) consistent with Mira variables on the AGB. The LPV luminosities are consistent with a population few x 10 (exp 8) yr old which is older than the Galactic Center central cluster stars and younger than bulge stars in Baade's Window, implying the Galactic Center has repeating episodes of star formation. Observations of the CO(v = 2 yields 0) 2.3 microns absorption feature taken at the CTIO 4m with the IR Spectrometer Array of the unresolved stellar emission at 9 positions within 30 arc sec of Sgr A* are presented. It is shown that the CO band strength is highly correlated with r(sub SgrA*) for radii less than R(sub CO) is approximately equal to 8.5 arc sec (0.28 pc). Dissert. Abstr.

NUMERICAL MODELS OF PLANE-SYMMETRIC SPACETIMES WITH APPLICATIONS TO GRAVITY-WAVE COLLISIONS Ph.D. Thesis
John Edward Jaynes 1992 138 p
Avail: Univ. Microfilms Order No. DA9309897

Plane-symmetric space times, while a highly restricted subset of solutions to Einstein equations, can still behave in nontrivial and interesting ways. We construct numerical models of vacuum, plane symmetric, periodic spacetimes using the 'space plus time' or '3 plus 1' formalism. These computer programs can represent and time-evolve inhomogeneous cosmologies or gravitational waves or both. One of them uses an unrestricted diagonal 3-metric, and can represent any of the Kasner cosmologies as well as complicated gravitational wave configurations. We also apply these numerical models to study collisions of gravity waves. Analytical results show that gravitational wave pulses propagating into Minkowski space, and then colliding, form curvature singularities in 'almost all' cases. Our investigations show that wave pulses which propagate into an expanding periodic Kasner background and collide, in at least some cases, do not form singularities. Dissert. Abstr.

NEUTRINO PROPERTIES
Maurizio Lusignoli 8 Jan. 1990 15 p Presented at the Theoretical and Phenomenological Aspects of Underground Physics Workshop, Aquila Univ., Italy, 25-28 Sep. 1989 Submitted for publication
(SSCL-Preprint-722; ETN-93-93623) Avail: CASI HC A03/MF A01

Several neutrino properties were investigated by studying the neutrino flow from supernovae and from the Sun. Experimental results and the general aspects of theoretical models giving nonzero neutrino masses are summarized. The detection of neutrinos coming from the supernovae allowed the determination of limits for the neutrino mass, the charge of the electron antineutrino and for the magnetic moment of the neutrino. The smallness of the neutrino flux from the Sun introduces some difficulties in the study of its properties. The possible anticorrelation between neutrino flux and

solar activity is considered. However, the present overground experimental data are consistent with model neutrinos. ESA

QUASAR REDSHIFTS AND NON-POTENTIAL INTERACTIONS
R. Mignani (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 21 Sep. 1990 6 p Submitted for publication
(SSCL-Preprint-758; ETN-93-93650) Avail: CASI HC A02/MF A01

A possible interpretation of the large redshifts of quasars in terms of a generalized (cosmological) Doppler effect, based on the Lie-isotropic lifting of relativity (i.e., to a deformation of the space-time metric when, non-potential forces are present) is suggested. The difficulties encountered in the explanation of quasar properties arise from the interpretation of their large redshifts and attempts were made to circumvent such difficulties by a 'nearby' localization of quasars. In order to uphold a noncosmological origin of the quasar redshifts, it is necessary to invoke breakdown in quasars of conventional physical laws. The main assumption, of the possible interpretation presented, is that within quasars there act non-potential, non-Hamiltonian forces that are much stronger than those possibly also present in galaxies. A COMPARATIVE EXAMINATION OF LMC X-4 AND Her X-1 X RAY DOUBLE STAR SYSTEMS Thesis - Ludwig-Maximilians Univ. [EINE VERGLEICHENDE UNTERSUCHUNG DER ROENTGENDOPPELSTERNSYSTEM LMC X-4 UND HER X-1]
Konrad Dennerl Dec. 1991 417 p In GERMAN
(MPE-232; ETN-93-93448) Copyright Avail: CASI HC A18/MF A04

LMCX-4 and Her X-1 systems are examined from Exosat observations to understand physical phenomena such as long term effects. Qualitative results, such as rotation behavior, pulse profile, spectrum, mass transport and thirty day cycle of LMCX-4, and mass transport and thirty five day cycle of Her X-1, are obtained. The processes used for Exosat data evaluation are presented: a method was developed to distinguish recorded X-ray photons according to their energy in the x-ray spectrum examination and dead time, energy, background, position, shading and tracking corrections of counting rates were achieved. It is concluded that both systems are accretion driven stellar x-ray sources with comparable dimensions, and are neutron stars with a mass similar to compact objects. It is shown that rotation of both neutron stars is in an equilibrium state and that the time behavior of x-ray intensity is characterized by three periods. It is proved that the gravitation field of the optical companion activates spiral density waves in the accretion disks of LMCX-4 and Her X-1, which extend to the magnetosphere and are countrarotating to the trajectory around the neutron stars during long term cycle. THE SEARCH FOR COLD DARK MATTER USING GERMANIUM DETECTORS Ph.D. Thesis
Juan Ignacio CollarColmenero 1992 290 p
Avail: Univ. Microfilms Order No. DA9307926

Data from two ultralow-background underground germanium detectors are used in a search for Cold Dark Matter (CDM) particles. The low-energy background is extensively studied, paying special attention to the cosmogenic radioisotopes produced in neutron spallation reactions. Theoretical predictions for the production rates of some isotopes of interest are obtained. Comparison with the observed rates in different detectors yields a good agreement between theory and experiment. Limits are extracted on the maximum amount of cosmogenic tritium present in the detectors. We present exclusion plots for WIMPS (Weakly Interacting Massive Particles) using conventional techniques on the data at hand. We then study the possibility of observing a unique signature from CDM by considering the effects of elastic scattering of candidate particles on the constituent nuclei of the Earth. The geology, nuclear physics, the Earth's orientation, rotation, and trajectory through the galactic halo are included, as well as the characteristic velocity distribution of CDM in the halo. Observable diurnal modulations in the detection rates and energy spectra are predicted for different particle candidates and are sought for in the data from one of the detectors. Predictions on the sensitivity of this new method in optimal geographical conditions are presented. Dissert. Abstr.

The final report on astrophysics data program investigation of spatial structure of supernova remnants for the period 1 Aug. 1989 to 31 Jul. 1991 is presented. The goal of the project was the study of the spatial structure of supernova remnants (SNR's) as observed in the x-ray band. A number of software tools were developed for the analysis: (1) a program to fit various geometric models to high resolution x-ray data, and (2) programs for Fourier Transform analysis of clumping in SNR's. These programs were applied to high resolution imager (HRI) data on the young galactic SNR's Tycho and Kepler with some success. Author (revised)

PHOTOEROSION IN ASTROPHYSICAL ENVIRONMENTS Ph.D. Thesis
Heidi S. Fencl 1992 163 p
Avail: Univ. Microfilms Order No. DA9307751

Photoerosion is a process by which a high energy photon interacts with a nucleus, knocking out a particle such as a proton or neutron, and leaving a smaller nucleus. This process could be capable of changing the abundances of light elements in environments with a large flux of energetic photons. One such environment is an active galactic nucleus (AGN). In this case, the abundances of isotopes of lithium, beryllium, and boron are of particular interest, as they can be produced from an abundant progenitor, carbon, and their production is interesting to studies of big bang nucleosynthesis. It was found that the production of these elements by photoerosion is potentially so large that it is possible to place limits on any AGN phase that the Milky Way may have undergone. Another type of astrophysical environment with a high photon flux is the neighborhood of a gamma-ray burster. Many theories exist as to the mechanism which causes bursts, but none is widely accepted. Therefore, any diagnostic which could provide information about a burst environment is of interest. If there are any nuclei in the region near a burster, photoerosion might provide such a diagnostic. In this case, the photoerosion products of interest are unstable nuclides, whose decay might be detected at earth. It was found that such signals are below detection limits of current instruments. However, another signal, the decay of positrons also produced by photonuclear reactions, is predicted to be observable for many parameters of the burst region. Furthermore, the strength and the time behavior of both types of signals would contain valuable information about the neighborhood near a burst, and any redshift of these signals would provide a direct measurement of the distance scale to gamma-ray. Dissert. Abstr.

During the past year significant progress included: a major breakthrough in oxygen production through discs (instead of tubes) that resulted in two orders-of-magnitude increase in the yield rates, proving that oxygen production from any iron-bearing silicate (avoiding costly beneficiation) in lunar in-situ resource utilization (ISRU); construction of a half-scale robotic soil processor; production of melt-spun fibers in a solar furnace; and the culmination of first-stage research in the construction (and delivery to NASA LaRC) of a self-contained portable oxygen plant that incorporates the first generation ISRU technologies developed at UA SERC. In addition, further reductions in mass and power needs were achieved in two smaller oxygen plants, which, however, have far greater production rates. SERC continued to attract bright students both at the undergraduate and graduate levels, and several area high school students through the Professional Internship Program (PIP) administered by the local school district. Invited lectures at elementary schools continue to draw enthusiastic response. Another important first was the creation of the Freshman Colloquium, 'Space in Our Future, and Our Future in Space,' geared toward women and minority students. This course proved to be a success, with more than one-half of the enrollment composed of women. In recognition of these important contributions, the author was appointed to the NRC Committee on Space Science Technologies. Author (revised)

The kinetics and mechanism of the reduction of simulants of the iron-bearing lunar minerals olivine ((Fe,Mg)2SiO4), pyroxene ((Fe,Mg,Ca)SiO3), and ilmenite (FeTiO3) are investigated, extending previous work with ilmenite. Fayalite is reduced by H2 at 1070 K to 1480 K. A layer of mixed silica glass and iron forms around an unreacted core. Reaction kinetics are influenced by permeation of hydrogen through this layer and a reaction step involving dissociated hydrogen. Reaction mechanisms are independent of Mg content. Augite, hypersthene, and hedenbergite are reduced in H2 at the same temperatures. The products are iron metal and lower iron silicates mixed throughout the mineral. Activation energy rises with calcium content. Ilmenite and fayalite are reduced with carbon deposited on partially reduced minerals via the CO disproportionation reaction. Reduction with carbon is rapid, showing the carbothermal reduction of lunar minerals is possible. Author (revised)

INNOVATIVE TECHNIQUES FOR THE PRODUCTION OF ENERGETIC RADICALS FOR LUNAR PROCESSING INCLUDING COLD PLASMA PROCESSING OF LOCAL PLANETARY ORES **c25**

D. Bullard and D. C. Lynch *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 8 p (For primary document see N93-26674 10-91)

Avail: CASI HC A02/MF A03; 1 functional color page

Hydrogen reduction of ilmenite has been studied by a number of investigators as a potential means for recovery of oxygen from lunar soil. Interest in this process has always rested with the simplicity of the flow diagram and the utilization of established technology. Effective utilization of hydrogen in the reduction process at temperatures of 1200 C and below has always been disappointing and, as such, has led other investigators to focus attention on other systems. Effective utilization of hydrogen in the reduction of ilmenite can be significantly enhanced in the presence of a non-equilibrium hydrogen plasma. Ilmenite at solid specimen temperatures of 600 C to 970 C were reacted in a hydrogen plasma. Those experiments revealed that hydrogen utilization can be significantly enhanced. At a specimen temperature of 850 C the fraction of H2 reacted was 24 percent compared to the 7 percent theoretical limit calculated with thermodynamic theory for the same temperature. An added advantage for a hydrogen plasma involves further reduction of TiO2. Reduction of the iron oxide in ilmenite yields TiO2 and metallic iron as by products. Titanium forms a number of oxides including TiO, Ti2O3, Ti3O5 and the Magneli oxides (Ti4O7 to Ti50O99). In conventional processing of ilmenite with hydrogen it is possible to reduce TiO2 to Ti7O13 within approximately an hour, but with poor utilization of hydrogen on the order of one mole of H2 per thousand. In the cold or non-equilibrium plasma TiO2 can be rapidly reduced to Ti2O3 with hydrogen utilization exceeding 10 percent. Based on design considerations of the plasma reactor greater utilization of the hydrogen in the reduction of TiO2 is possible. Author (revised)

Work during the past year involved two aspects: (1) electrolysis experiments on a larger scale than done before, and (2) collaboration with Carbotek Inc. on design for a lunar magma electrolysis cell. It was demonstrated previously that oxygen can be produced by direct electrolysis of silicate melts. Previous experiments using 50-100 mg of melt have succeeded in measuring melt resistivities, oxygen production efficiencies, and have identified the character of metal products. A series of experiments using 1-8 grams of silicate melt, done in alumina and spinel containers sufficiently large that surface tension effects between the melt and the wall are expected to have minor effect on the behavior of the melt in the region of the electrodes were completed. The purpose of these experiments was to demonstrate the durability of the electrode and container materials, demonstrate the energy efficiency of the electrolysis process, further characterize the nature of the expected metal and spinel products, measure the efficiency of oxygen production and compare to that predicted on the basis of the smaller-scale experiments, and identify any unexpected benefits or problems of the process. Four experimental designs were employed. Detailed results of these experiments are given in the appendix ('Summary of scaling-up experiments'); a general report of the results is given in terms of implications of the experiments on container materials, cathode materials, anode materials, bubble formation and frothing of the melt, cell potential, anode-cathode distance, oxygen efficiency, and energy efficiency. Melting and electrolyzing lunar silicates yields oxygen gas and potentially can be practiced in situ to produce oxygen. With the present experiments conducted with simulant oxides at 1425-1480 C, it was ascertained that oxygen can be obtained anodically at feasible rates and current efficiencies. An electrolysis cell was operated with platinum anodes in a sealed vessel, and the production of gas was monitored. In these electrolysis experiments, stability of anodes remained a problem, and iron and silicon did not reduce readily into the liquid silver cathode. Author (revised)

LUNAR MINING OF OXYGEN USING FLUORINE **c25**

Donald M. Burt, James A. Tyburczy, Jeffery J. Roberts, and Rajan Balasubramanian *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 9 p (For primary document see N93-26674 10-91)
Avail: CASI HC A02/MF A03; 1 functional color page

Experiments during the first year of the project were directed towards generating elemental fluorine via the electrolysis of anhydrous molten fluorides. Na2SiF6 was dissolved in either molten NaBF4 or a eutectic (minimum-melting) mixture of KF-LiF-NaF and electrolyzed between 450 and 600 C to Si metal at the cathode and F2 gas at the anode. Ar gas was continuously passed through the system and F2 was trapped in a KBr furnace. Various anode and cathode materials were investigated. Despite many experimental difficulties, the capability of the process to produce elemental fluorine was demonstrated. Author (revised)

BENEFICIATION OF ILMENITE FROM LUMAR ANALOG **c25**

G. Ramadorai and R. Dean *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 10 p (For primary document see N93-26674 10-91)
Avail: CASI HC A02/MF A03; 1 functional color page

The results reported were obtained on a meteoric eucrite sample called Millbillillie Sample no. 173. Optical microscopy studies of the sample showed it to consist of ilmenite, troilite, and transparent gangue. The transparent gangue consisted of feldspar (anorthite), pyroxenes, olivines, and opaques. Troilite was present in minor quantities. Screen assay analyses of the 30, 100, 200, and 400 US mesh screen fractions showed that minor concentration of titanium occurred in the 200 x 400 and -400 mesh screen fractions. Scanning electron microscopy (SEM) studies of the bulk sample showed the presence of a variety of ilmenite grains, ranging from 50 microns down to less than 1 micron without any evidence of liberation. Electron Diffraction Scans (EDS) confirmed the ratio of Fe to Ti in the ilmenite grains. Dry magnetic separation in a Frantz Isodynamic Separator was found to be effective only at sizes finer than 150 microns (100 US mesh) and more so at 200 mesh (74 microns). In each case, dedusting of the sample to remove -400 mesh (-0.037 microns) fines was required. Liberation size was determined to be 200 mesh and finer. The highest grade concentrate assaying 3.45 percent Ti was produced by magnetic separation of the -200 + 400 mesh screen fraction assaying 0.44 Ti (from a -30 mesh sample) at a current setting of 0.35 AMP. This concentrate contained 21.2 percent of the Ti values in the screen fraction with 2.72 weight percent of feed to test. The results can be projected to a sample stage ground to -200 mesh. Magnetic separation of the 200 + 400 mesh (-0.074 + 0.037 microns) should produce a concentrate accounting for 1.41 weight percent of the feed. This concentrate will analyze 3.45 percent Ti and contain 10.3 percent of the Ti values in the feed. By changing the Frantz Magnetic Separator settings, a lower grade concentrate analyzing 0.98 percent Ti can be produced at an increased recovery of 25.4 percent. The concentrate weight will be 11.7 percent of the feed. It must be emphasized that improved grades and recoveries can be obtained with the -400 mesh fines. However, beneficiation of these extremely fine materials is not possible in a practical process scheme. Author (revised)

Recent progress in defining the physical, orbital, and chemical properties of the Earth-crossing asteroid and comet population was integrated into an elaborate Monte Carlo model of the fluxes of bodies in the inner Solar System. This model is of use in projecting flight opportunities to as-yet undiscovered near-Earth objects and in assessing the impact hazard to life on Earth and the evolutionary consequences of impacts on the other terrestrial planets. Further progress was made in defining desirable transportation system architectures for the use of non-terrestrial volatiles and metals, including the delivery of propellants to near-Earth space for fueling of space exploration initiative (SEI) type expeditions, the construction and resupply of Solar Power Satellite constellations in various Earth orbits (including geosynchronous earth orbit (GEO) and Highly Eccentric Earth Orbit (HEEO)), and retrieval of He-3 for use as a clean fusion fuel on Earth. These studies suggest a greater future role for SERC in the exploration of space energy sources to meet Earth's 21st-century energy requirements. Laboratory studies of volatilization and deposition of ferrous metal alloys demonstrated deposition of strong iron films from carbonyl chemical vapor deposition (CVD), showing the crucial role of additive gases in governing the CVD process, and pointing the way to specific experiments on extraction and deposition of ferrous metals from nonterrestrial materials. OXYGEN PRODUCTION ON MARS AND THE MOON **c31**

K. R. Sridhar, B. Vaniman, and S. Miller *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 15 p (For primary document see N93-26674 10-91)
Avail: CASI HC A03/MF A03; 1 functional color page

Significant progress was made in the area of in-situ oxygen production in the last year. In order to reduce sealing problems due to thermal expansion mismatch in the disk configuration, several all-Zirconia cells were constructed and are being tested. Two of these cells were run successfully for extended periods of time. One was run for over 200 hours and the other for over 800 hours. These extended runs, along with gas sample analysis, showed that the oxygen being produced is definitely from CO2 and not from air leaks or from the disk material. A new tube system is being constructed that is more rugged, portable, durable, and energy efficient. The important operating parameters of this system will be better controlled compared to previous systems. An electrochemical compressor will also be constructed with a similar configuration. The electrochemical compressor will use less energy since the feed stock is already heated in the separation unit. In addition, it does not have moving parts. Author

DEHYDRATION KINETICS AND THERMOCHEMISTRY OF SELECTED HYDROUS PHASES, AND SIMULATED GAS RELEASE PATTERN IN CARBONACEOUS CHONDRITES **c25**

Kunal Bose and J. Ganguly *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 14 p (For primary document see N93-26674 10-91)
Avail: CASI HC A03/MF A03; 1 functional color page

As part of our continued program of study on the volatile bearing phases and volatile resource potential of carbonaceous chondrite, results of our experimental studies on the dehydration kinetics of talc as a function of temperature and grain size (50 to 0.5 microns), equilibrium dehydration boundary of talc to 40 kbars, calorimetric study of enthalpy of formation of both natural and synthetic talc as a function of grain size, and preliminary results on the dehydration kinetics of epsomite are reported. In addition, theoretical calculations on the gas release pattern of Murchison meteorite, which is a C2(CM) carbonaceous chondrite, were performed. The kinetic study of talc leads to a dehydration rate constant for 40-50 microns size fraction of $k = (3.23 \times 10(\exp 4))\exp(-Q/RT)$/min with the activation energy $Q = 376$ (plus or minus 20) kJ/mole. The dehydration rate was found to increase somewhat with decreasing grain size. The enthalpy of formation of talc from elements was measured to be -5896(10) kJ/mol. There was

no measurable effect of grain size on the enthalpy beyond the limits of precision of the calorimetric studies. Also the calorimetric enthalpy of both synthetic and natural talc was found to be essentially the same, within the precision of measurements, although the natural talc had a slightly larger field of stability in our phase equilibrium studies. The high pressure experimental data the dehydration equilibrium of talc (talc = enstatite + coesite + H2O) is in strong disagreement with that calculated from the available thermochemical data, which were constrained to fit the low pressure experimental results. The calculated gas release pattern of Murchison meteorite were in reasonable agreement with that determined by stepwise heating in a gas chromatograph. Author (revised)

MELT-PROCESSING OF LUNAR CERAMICS **c27**

B. D. Fabes, W. H. Poisl, D. Allen, M. Minitti, S. Hawley, and T. Beck *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 12 p (For primary document see N93-26674 10-91)

Avail: CASI HC A03/MF A03

The goal of this project is to produce useful ceramics materials from lunar resources using the by products of lunar oxygen production processes. Emphasis is being placed on both fabrication of a variety of melt-processed ceramics, and on understanding the mechanical properties of these materials. Previously, glass-ceramics were formed by casting large glass monoliths and heating these to grow small crystallites. The strengths of the resulting glass-ceramics were found to vary with the inverse square root of the crystal grain size. The highest strengths (greater than 300 MPa) were obtained with the smallest crystal sizes (less than 10 microns). During the past year, the kinetics of crystallization in simulated lunar regolith were examined in an effort to optimize the microstructure and, hence, mechanical properties of glass ceramics. The use of solar energy for melt-processing of regolith was examined, and strong (greater than 630 MPa) glass fibers were successfully produced by melt-spinning in a solar furnace. A study of the mechanical properties of simulated lunar glasses was completed during the past year. As on Earth, the presence of moisture was found to weaken simulated lunar glasses, although the effects of surface flaws was shown to outweigh the effect of atmospheric moisture on the strength of lunar glasses. The effect of atmospheric moisture on the toughness was also studied. As expected, toughness was found to increase only marginally in an anhydrous atmosphere. Finally, our efforts to involve undergraduates in the research lab fluorished this past year. Four undergraduates worked on various aspects of these projects; and two of them were co-authors on papers which we published. Author (revised)

RECOVERY AND SEPARATION OF PRECIOUS METALS FROM SPACE **c26**

H. Freiser and S. Muralidharan *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 3 p (For primary document see N93-26674 10-91)

Avail: CASI HC A01/MF A03; 1 functional color page

During the past year a viable procedure centered around centrifugal partition chromatography (CPC), a multistage liquid-liquid partitioning technique for the separation of precious metals (Pt, Pd, Rh, Ir, Os, Ru), was developed. Stable and inexpensive ligands that can be readily recycled to achieve the separations of the precious metals were identified. The separation methods developed so far yield three separate fractions: Pt, Pd, and Rh-Ir. The Rh-Ir pair can be separated in a subsequent run. The total amount of precious metals separated in a single experiment varied from 1 to 50 mg. The factors affecting the efficiencies of these separations were studied. The kinetics of the decomposition of the complex and the ion pair have a major bearing on these efficiencies, with slow kinetics resulting in poor efficiencies. The methods for the improvement of the efficiencies were also investigated. For example, significant improvement in the efficiencies and separation times for Pt and Pd were achieved by the use of chloride gradient in the mobile phase. Two papers were published and talks were presented on our work at the FACSS meeting in Anaheim, Oct. 1991, and at the Pittsburgh Conference in New Orleans, Mar. 1992. Author (revised)

Development of versatile engineering materials from locally available materials in space is an important step toward the establishment of outposts on the Moon and Mars. Development of the technologies for manufacture of structural and construction materials on the Moon, utilizing local lunar soil (regolith), without the use of water, is an important element for habitats and explorations in space. It is also vital that the mechanical behavior such as strength and tensile, flexural properties, fracture toughness, ductility, and deformation characteristics are defined toward establishment of the ranges of engineering applications of the materials developed. The objectives include two areas: (1) thermal 'liquefaction' of lunar simulant (at about 1100 C) with different additives (fibers, powders, etc.), and (2) development and use of a new triaxial test device in which lunar simulants are first compacted under cycles of loading, and then tested with different vacuums and initial confining or in situ stress. Details of the development of intermediate ceramic composites (ICC) and testing for their flexural and compression characteristics were described in various reports and papers. The subject of behavior of compacted simulant under vacuum was described in previous progress reports and publications; since the presently available device allows vacuum levels up to only 10(exp -4) torr, it is recommended that a vacuum pump that can allow higher levels of vacuum be utilized for further investigation. Author (revised)

LAREG AREA SOLAR CELLS FROM LUNAR MATERIALS **c44**

Read Bryant, Paul Calvert, and Jean Corley *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 7 p (For primary document see N93-26674 10-91)

Avail: CASI HC A02/MF A03; 1 functional color page

The first goal of the project was to produce polymers from materials available on the Moon. This, apparently simple, aim is made complicated by the fact that there is no carbon on the Moon and there are no polymers (with a couple of irrelevant exceptions) known which do not contain carbon. Because of the abundance of silicon and oxygen in the lunar regolith, it was decided to aim to produce siloxane polymers with the (-Si-O-) backbone found in silicones. A univalent side group is also needed but there are no univalent elements available in the regolith which could plausibly make stable structures. Failing this, hydrogen is a good choice for side group since it accounts for a small fraction of the total weight of the polymer. Thus, a group of target structures such as (-SiH2-O-)n, (-Si(OH)2-O-)n is determined. This goal was approached via a series of simpler syntheses. During the first year, polydimethylsiloxane (-Si(CH3)2-O-)n was made by controlled hydrolysis of SiCl2(CH3)2, which is a routine synthesis, and then an attempt was made to make polydichlorosiloxane by controlled hydrolysis of SiCl4. At the end of the first year, some infra-red spectra indicated that this product had been obtained. Author (revised)

DETERMINATION OF LUNAR ILMENITE ABUNDANCE FROM REMOTELY SENSED DATA

S. M. Larson, D. E. Melendrez, J. R. Johnson, and R. B. Singer *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 6 p Original contains color illustrations (For primary document see N93-26674 10-91)

Avail: CASI HC A02/MF A03; 1 functional color page

Of fundamental importance in the utilization of indigenous resources for a future permanently manned lunar base is the identification and mapping of the abundance distribution of the mineral ilmenite, which is currently considered the most readily identifiable and most easily accessible source of oxygen needed for human consumables and spacecraft propellant. Solid state detector array technology now permits the use of ground based multispectral remote sensing techniques to produce maps with better than one kilometer spatial resolution and uncertainties of about two weight-percent TiO2 abundance. An empirical relationship between the weight-percent

abundance of titanium dioxide and the 400/560 nm spectral ratio measured in returned lunar samples was used. Because this abundance correlation is valid only for mature lunar mare regolith, the distribution of immature mafic minerals which were found to be correlated primarily with steep slopes exposing bedrock was qualitatively mapped. The first mapping phase focused on the entire lunar nearside at 5.3 km per pixel, and on experiments with more sensitive spectral ratios. Relative spectrophotometry was employed to aid in identifying wavelengths that provide greater spectral contrast. It was found that the 400/730 nm ratio improved the abundance sensitivity by 37 percent, while the 950/730 nm ratio improved mafic mineral contrast about 100 percent. The second mapping phase utilized a large experimental CCD at 280 m per pixel to map the high titanium regions identified in the phase one mapping. The high resolution maps provide data on the small scale (500 m) variations in abundance and their relationship to morphological units. Author (revised)

COMPOSITION OF NEAR-EARTH ASTEROIDS c90
Larry A. Lebofsky *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 6 p (For primary document see N93-26674 10-91)
Avail: CASI HC A02/MF A03; 1 functional color page

The continuing goal is to determine whether any of the near-Earth asteroids or the satellites of Mars contain hydrated phyllosilicate (clay) minerals. If these minerals are present, they would provide a ready source of water for propellant generation and use in life support systems. Many of the dark main belt asteroids have been shown to contain hydrated phyllosilicate minerals. Some of the near-Earth asteroids are also dark, but telescopic detection of water on these near-Earth asteroids is complicated because of the faintness of these small asteroids and because thermal emission masks the diagnostic spectral features beyond 3 microns due to water of hydration for objects within 2 AU of the Sun. New techniques for asteroid classification based on spectral reflectance and mineralogy will be necessary to determine whether the water absorption features are present on any of the near-Earth asteroids. This past year, better ways to classify 'wet' vs. 'dry' asteroids in the main belt were looked at. This new classification may allow us to determine the presence of water of hydration in the surface minerals of near-Earth asteroids even when we can only observe them at wavelengths that are not affected by thermal emission.

Our overall scientific goal is to survey the solar system to completion - that is, to find the various populations and to study their statistics, interrelations, and origins. The practical benefit to SERC is that we are finding Earth-approaching asteroids that are accessible for mining. Our system can detect Earth-approachers in the 1-km size range even when they are far away, and can detect smaller objects when they are moving rapidly past Earth. Until Spacewatch, the size range of 6-300 meters in diameter for the near-Earth asteroids was unexplored. This important region represents the transition between the meteorites and the larger observed near-Earth asteroids. One of our Spacewatch discoveries, 1991 VG, may be representative of a new orbital class of object. If it is really a natural object, and not man-made, its orbital parameters are closer to those of the Earth than we have seen before; its delta V is the lowest of all objects known thus far. We may expect new discoveries as we continue our surveying, with fine-tuning of the techniques. Author (revised)

ABUNDANCE OF He-3 AND OTHER SOLAR-WIND-DERIVED VOLATILES IN LUNAR SOIL
Timothy D. Swindle *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 8 p (For primary document see N93-26674 10-91)
Avail: CASI HC A02/MF A03; 1 functional color page

Volatiles implanted into the lunar regolith by the solar wind are potentially important lunar resources. Wittenberg et al. (1986) have proposed that lunar He-3 could be used as a fuel for terrestrial nuclear fusion reactors. They argue that a fusion scheme involving D and He-3 would be cleaner and more efficient than currently-proposed schemes involving D and T. However, since the terrestrial inventory of He-3 is so small, they suggest that the lunar regolith, with concentrations of the order of parts per billion (by mass) would be an economical source of He-3. Solar-wind implantation is also the primary source of H, C, and N in lunar soil. These elements could also be important, particularly for life support and for propellant production. In a SERC study of the feasibility of obtaining the necessary amount of He-3, Swindle et al. (1990) concluded that the available amount is sufficient for early reactors, at least, but that the mining problems, while not necessarily insurmountable, are prodigious. The volatiles H, C, and N, on the other hand, come in parts per million level abundances. The differences in abundances mean that (1) a comparable amount of H, C, and/or N could be extracted with orders of magnitude smaller operations than required for He-3, and (2) if He-3 extraction ever becomes important, huge quantities of H, C, and N will be produced as by-products.

MODELING, SIMULATION, AND HIGH-AUTONOMY CONTROL OF A MARTIAN OXYGEN PRODUCTION PLANT c31
L. C. Schooley, F. E. Cellier, F.-Y. Wang, and B. P. Zeigler *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 20 p (For primary document see N93-26674 10-91)
Avail: CASI HC A03/MF A03; 1 functional color page

Progress on a project for the development of a high-autonomy intelligent command and control architecture for process plants used to produce oxygen from local planetary resources is reported. A distributed command and control architecture is being developed and implemented so that an oxygen production plant, or other equipment, can be reliably commanded and controlled over an extended time period in a high-autonomy mode with high-level task-oriented teleoperation from one or several remote locations. During the reporting period, progress was made at all levels of the architecture. At the remote site, several remote observers can now participate in monitoring the plant. At the local site, a command and control center was introduced for increased flexibility, reliability, and robustness. The local control architecture was enhanced to control multiple tubes in parallel, and was refined for increased robustness. The simulation model was enhanced to full dynamics descriptions. DEVELOPMENT OF A MATERIAL PROCESSING PLANT FOR LUNAR SOIL c31
Ulix Goettsch and Karl Ousterhout *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 9 p (For primary document see N93-26674 10-91)
Avail: CASI HC A02/MF A03; 1 functional color page

Currently there is considerable interest in developing in-situ materials processing plants for both the Moon and Mars. Two of the most important aspects of developing such a materials processing plant is the overall system design and the integration of the different technologies into a reliable, lightweight, and cost-effective unit. The concept of an autonomous materials processing plant that is capable of producing useful substances from lunar regolith was developed. In order for such a materials processing plant to be considered as a viable option, it must be totally self-contained, able to operate autonomously, cost effective, light weight, and fault tolerant. In order to assess the impact of different technologies on the overall systems design and integration, a one-half scale model was constructed that is capable of scooping up (or digging) lunar soil, transferring the soil to a solar furnace, heating the soil in the furnace to liberate the gasses, and transferring the spent soil to a 'tile' processing center. All aspects of the control system are handled by a 386 class PC via D/A, A/D, and DSP (Digital Signal Processor) control cards. Author (revised)

IN-SITU MATERIALS PROCESSING SYSTEMS AND BIOREGENERATIVE LIFE SUPPORT SYSTEMS INTERRELATIONSHIPS c24
George V. Mignon and Robert J. Frye *In* Arizona Univ., NASA Space

Engineering Research Center for Utilization of Local Planetary Resources 1992 3 p (For primary document see N93-26674 10-91)
Avail: CASI HC A01/MF A03; 1 functional color page

The synergy and linkages between bioregenerative life support systems and the materials produced by in-situ materials processing systems was investigated. Such systems produce a broad spectrum of byproducts such as oxygen, hydrogen, processed soil material, ceramics, refractory, and other materials. Some of these materials may be utilized by bioregenerative systems either directly or with minor modifications. The main focus of this project was to investigate how these materials can be utilized to assist a bioregenerative life support system. Clearly the need to provide a sustainable bioregenerative life support system for long term human habitation of space is significant. Author (revised)

FULL SYSTEM ENGINEERING DESIGN AND OPERATION OF AN OXYGEN PLANT **c31**

James Colvin, Paul Schallhorn, and Kumar Ramonhalli *In its* NASA Space Engineering Research Center for Utilization of Local Planetary Resources 1992 17 p (For primary document see N93-26674 10-91)
Avail: CASI HC A03/MF A03; 1 functional color page

The production of oxygen from the indigenous resources on Mars is described. After discussing briefly the project's background and the experimental system design, specific experimental results of the electrolytic cell are presented. At the heart of the oxygen production system is a tubular solid zirconia electrolyte cell that will electrochemically separate oxygen from a high-temperature stream of Coleman grade carbon dioxide. Experimental results are discussed and certain system efficiencies are defined. The parameters varied include (1) the cell operating temperature; (2) the carbon dioxide flow rate; and (3) the voltage applied across the cell. The results confirm our theoretical expectations. A customized, mission-specific relational database package was developed to allow researchers working on the Mars oxygen manufacturing plant to enter physical description, engineering, and connectivity data through a uniform, graphical interface and to store the data in formats compatible with other software also developed as part of the project. These latter components include an optimization program to maximize or minimize various criteria as the system evolves into its final design; programs to simulate the behavior of various parts of the plant in Martian conditions; an animation program which, in different modes, provides visual feedback to designers and researchers about the location of and temperature distribution among components as well as heat, mass, and data flow through the plant as it operates in different scenarios; and a control program to investigate the stability and response of the system under different disturbance conditions. All components of the system are interconnected so that changes entered through one component are reflected in the others. Author

The Steward Observatory Asteroid Relational Database (SOARD) was created as a flexible tool for undertaking studies of asteroid populations and sub-populations, to probe the biases intrinsic to asteroid databases, to ascertain the completeness of data pertaining to specific problems, to aid in the development of observational programs, and to develop pedagogical materials. To date SOARD has compiled an extensive list of data available on asteroids and made it accessible through a single menu-driven database program. Users may obtain tailored lists of asteroid properties for any subset of asteroids or output files which are suitable for plotting spectral data on individual asteroids. A browse capability allows the user to explore the contents of any data file. SOARD offers, also, an asteroid bibliography containing about 13,000 references. The program has online help as well as user and programmer documentation manuals. SOARD continues to provide data to fulfill requests by members of the astronomical community and will continue to grow as data is added to the database and new features are added to the program. Avail: CASI HC A02/MF A03; 1 functional color page

This project strives to obtain physical observations on newly discovered Near-Earth Objects (NEO's) in order to provide fundamental data needed to assess the resources available in the population. The goal is acquiring data on all objects brighter than magnitude V= 17.0. To accomplish this, an electronic mail alert and observer information service that informs observers around the world as to the status of physical observations on currently observable NEO's was established. Such data is also acquired ourselves through a cooperative program with European colleagues that uses telescopes on La Palma to obtain spectra of NEO's and through observations made from a local telescope on Tumamoc Hill. This latter telescope has the advantage that large amounts of observing time are available, so that whenever a new NEO's discovered, we can be assured of getting time to observe it. Author

REGIONAL TECTONIC ANALYSIS OF VENUS EQUATORIAL HIGHLANDS AND COMPARISON WITH EARTH-BASED MAGELLAN RADAR IMAGES

David R. Williams and George Wetherill 1993 16 p
(Grant NAG2-741)
(NASA-CR-192996; NAS 1.26:192996) Avail: CASI HC A03/MF A01

Research on regional tectonic analysis of Venus equatorial highlands and comparison with earth-based and Magellan radar images is presented. Over the past two years, the tectonic analysis of Venus performed centered on global properties of the planet, in order to understand fundamental aspects of the dynamics of the mantle and lithosphere of Venus. These include studies pertaining to the original constitutive and thermal character of the planet, as well as the evolution of Venus through time, and the present day tectonics. Parameterized convection models of the Earth and Venus were developed. The parameterized convection code was reformulated to model Venus with an initially hydrous mantle to determine how the cold-trap could affect the evolution of the planet. CASI

EROSIONAL AND DEPOSITIONAL HISTORY OF CENTRAL CHRYSE PLANITIA Final Technical Report, 1 Sep. 1989 - 31 Oct. 1992

L. S. Crumpler 31 Oct. 1992 40 p
(Grant NAGw-2171)
(NASA-CR-193068; NAS 1.26:193068) Avail: CASI HC A03/MF A01

This map uses high resolution image data to assess the detailed depositional and erosional history of part of Chryse Planitia. This area is significant to the study of the global geology of Mars because it represents one of only two areas on the martian surface where planetary geologic mapping is assisted with 'ground truth.' In this case the ground truth was provided by Viking Lander 1. Additional questions addressed in this study are concerned with the following: the geologic context of the regional plains surface and the local surface of the Viking Lander 1 site; and the relative influence of volcanic, sedimentary, impact, aeolian, and tectonic processes at the regional and local scales. MARS AQUEOUS CHEMISTRY EXPERIMENT Annual Technical Report, Jun. 1992 - Jun. 1993

Benton C. Clark and Larry W. Mason Jun. 1993 24 p Original contains color illustrations

(Contract NASw-4698)

(NASA-CR-193134; NAS 1.26:193134; MCR-93-1339) Avail: CASI HC A03/MF A01; 5 functional color pages

The Mars Aqueous Chemistry Experiment (MACE) is designed to conduct a variety of measurements on regolith samples, encompassing mineral phase analyses, chemical interactions with H2O, and physical properties determinations. From these data, much can be learned or inferred regarding the past weathering environment, the contemporaneous soil micro-environments, and the general chemical and physical state of the Martian regolith. By analyzing both soil and duricrust samples, the nature of the latter may become more apparent. Sites may be characterized for comparative purposes and criteria could be set for selection of high priority materials on future sample return missions. Progress for the first year MACE PIDDP is reported in two major areas of effort: (1) fluids handling concepts, definition, and breadboard fabrication and (2) aqueous chemistry ion sensing technology and test facility integration. A fluids handling breadboard was designed, fabricated, and tested at Mars ambient pressure. The breadboard allows fluid manipulation scenarios to be tested under the reduced pressure conditions expected in the Martian atmosphere in order to validate valve operations, orchestrate analysis sequences, investigate sealing integrity, and to demonstrate efficacy of the fluid handling concept. Additional fluid manipulation concepts have also been developed based on updated MESUR spacecraft definition. The Mars Aqueous Chemistry Experiment Ion Selective Electrode (ISE) facility was designed as a test bed to develop a multifunction interface for measurements of chemical ion concentrations in aqueous solution. The interface allows acquisition of real time data concerning the kinetics and heats of salt dissolution, and transient response to calibration and solubility events. An array of ion selective electrodes has been interfaced and preliminary calibration studies performed. Author (revised)

PROCEEDINGS OF THE LUNAR MATERIALS TECHNOLOGY SYMPOSIUM

Feb. 1992 363 p Symposium held at Tuscon, AZ, 20-22 Feb. 1992

(Grant NAGw-1332)

(NASA-CR-192881; NAS 1.26:192881) Avail: CASI HC A16/MF A03

The meeting was organized around a possible lunar outpost scenario, featuring industrial technologies, systems, and components applicable to the extraction, processing, and fabrication of local materials. Acknowledged space resources experts as well as investigators from outside the field whose knowledge could be applied to space development activities were brought together. Presentations came from a variety of specialists in fields such as minerals processing, environmental control, and communications. The sessions of the symposium were divided into the following areas: resource characterization, energy management, materials processing, environment control, and automation and communications. For individual titles, see N93-27957 through N93-27988.

THE CHALLENGES AND BENEFITS OF LUNAR EXPLORATION

Aaron Cohen *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 6 p (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

Three decades into the Space Age, the United States is experiencing a fundamental shift in space policy with the adoption of a broad national goal to expand human presence and activity beyond Earth orbit and out into the Solar System. These plans mark a turning point in American space exploration, for they entail a shift away from singular forays to a long-term, evolutionary program of exploration and utilization of space. No longer limited to the technical and operational specifics of any one vehicle or any one mission plan, this new approach will involve a fleet of spacecraft and a stable of off-planet research laboratories, industrial facilities, and exploration programs. The challenges inherent in this program are immense, but so too are the benefits. Central to this new space architecture is the concept of using a lunar base for in-situ resource utilization, and for the development of planetary surface exploration systems, applicable to the Moon, Mars, and other planetary bodies in the Solar System. This paper discusses the technical, economic, and political challenges involved in this new approach, and details the latest thinking on the benefits that could come from bold new endeavors on the final frontier. RETURN TO THE MOON: LUNAR ROBOTIC SCIENCE MISSIONS

Lawrence A. Taylor *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 10 p (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

There are two important aspects of the Moon and its materials which must be addressed in preparation for a manned return to the Moon and establishment of a lunar base. These involve its geologic science and resource utilization. Knowledge of the Moon forms the basis for interpretations of the planetary science of the terrestrial planets and their satellites; and there are numerous exciting explorations into the geologic science of the Moon to be conducted using orbiter and lander missions. In addition, the rocks and minerals and soils of the Moon will be the basic raw materials for a lunar outpost; and the In-Situ Resource Utilization (ISRU) of lunar materials must be considered in detail before any manned return to the Moon. Both of these fields -- planetary science and resource assessment -- will necessitate the collection of considerable amounts of new data, only obtainable from lunar-orbit remote sensing and robotic landers. For over fifteen years, there have been a considerable number of workshops, meetings, etc. with their subsequent 'white papers' which have detailed plans for a return to the Moon. The Lunar Observer mission, although grandiose, seems to have been too expensive for the austere budgets of the last several years. However, the tens of thousands of man-hours that have gone into 'brainstorming' and production of plans and reports have provided the precursor material for today's missions. It has been only since last year (1991) that realistic optimism for lunar orbiters and soft landers has come forth. Plans are for 1995 and 1996 'Early Robotic Missions' to the Moon, with the collection of data necessary for answering several of the major problems in lunar science, as well as for resource and site evaluation, in preparation for soft landers and a manned-presence on the Moon Author (revised)

CHARACTERIZATION OF LUNAR SURFACE MATERIALS FOR USE IN CONSTRUCTION

Stewart W. Johnson and Jack O. Burns (New Mexico State Univ., Las Cruces.) *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 6 p (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

The Workshop on the Concept of a Common Lunar Lander, which was held at the NASA Johnson Space Center on July 1 and 2, 1991, discussed potential payloads to be placed on the Moon by a common, generic, unmanned, vehicle beginning late in this decade. At this workshop, a variety of payloads were identified including a class of one-meter (and larger) optical telescopes to operate on the lunar surface. These telescopes for lunar-based astronomy are presented in an earlier section of this report. The purpose of this section is to suggest that these and other payloads for the Common Lunar Lander be used to facilitate technology development for the proposed 16-meter Aperture UV/Visible/IR Large Lunar Telescope (LLT) and a large optical aperture-synthesis instrument analogous to the Very Large Array of the National Radio Astronomy Observatory. AN ENGINEER/CONSTRUCTOR'S VIEW OF LUNAR RESOURCE DEVELOPMENT Abstract only

Carleton H. Jones *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 1 p (For primary document see N93-27956 10-91)

Avail: CASI HC A01/MF A03

A strawman lunar outpost scenario has been postulated as a special

focus to guide the papers in this symposium. This scenario describes an evolving facility with basic components, personnel, and activities intended to support lunar missions that lead to a permanent occupation on the lunar surface. The engineer/constructor's view of establishing a lunar outpost is largely concerned with identifying and analyzing the logistics needed to transform the engineering designs on paper into a constructed and operating facility. This means that all aspects of the outpost design will be examined to satisfy constructability requirements and to develop a construction management plan that leads to successful facility startup and routine operations. Whether the facility is to be devoted to materials production, vehicle refueling, or science projects will influence the construction plan in its details, but the construction of all lunar facilities will be mainly governed by the difficult logistics path from Earth to the lunar surface.

ENERGY FOR LUNAR RESOURCE EXPLOITATION

Peter E. Glaser *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 8 p (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

Humanity stands at the threshold of exploiting the known lunar resources that have opened up with the access to space. America's role in the future exploitation of space, and specifically of lunar resources, may well determine the level of achievement in technology development and global economic competition. Space activities during the coming decades will significantly influence the events on Earth. The 'shifting of history's tectonic plates' is a process that will be hastened by the increasingly insistent demands for higher living standards of the exponentially growing global population. Key to the achievement of a peaceful world in the 21st century, will be the development of a mix of energy resources at a societally acceptable and affordable cost within a realistic planning horizon. This must be the theme for the globally applicable energy sources that are compatible with the Earth's ecology. It is in this context that lunar resources development should be a primary goal for science missions to the Moon, and for establishing an expanding human presence. The economic viability and commercial business potential of mining, extracting, manufacturing, and transporting lunar resource based materials to Earth, Earth orbits, and to undertake macroengineering projects on the Moon remains to be demonstrated. These extensive activities will be supportive of the realization of the potential of space energy sources for use on Earth. These may include generating electricity for use on Earth based on beaming power from Earth orbits and from the Moon to the Earth, and for the production of helium 3 as a fuel for advanced fusion reactors. ADVANCED PHOTOVOLTAIC POWER SYSTEMS USING TANDEM GaAs/GaSb CONCENTRATOR MODULES **c44**

L. M. Fraas, M. S. Kuryla, D. A. Pietila, V. S. Sundaram, P. E. Gruenbaum, J. E. Avery, V. Dihn, R. Ballantyne, and C. Samuel *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 13 p (For primary document see N93-27956 10-91)

Avail: CASI HC A03/MF A03

In 1989, Boeing announced the fabrication of a tandem gallium concentrator solar cell with an energy conversion efficiency of 30 percent. This research breakthrough has now led to panels which are significantly smaller, lighter, more radiation resistant, and potentially less expensive than the traditional silicon flat plate electric power supply. The new Boeing tandem concentrator (BTC) module uses an array of lightweight silicone Fresnel lenses mounted on the front side of a light weight aluminum honeycomb structure to focus sunlight onto small area solar cells mounted on a thin back plane. This module design is shown schematically. The tandem solar cell in this new module consists of a gallium arsenide light sensitive cell with a 24 percent energy conversion efficiency stacked on top of a gallium antimonide infrared sensitive cell with a conversion efficiency of 6 percent. This gives a total efficiency 30 percent for the cell-stack. The lens optical efficiency is typically 85 percent. Discounting for efficiency losses associated with lens packing, cell wiring, and cell operating temperature still allows for a module efficiency of 22 percent which leads to a module power density of 300 Watts/sq. m. This performance provides more than twice the power density available from a single crystal silicon flat plate module and at least four times the power density available from amorphous silicon modules. The fact that the lenses are only 0.010 ft. thick and the aluminum foil back plane is only 0.003 ft. thick leads to a very lightweight module. Although the cells are an easy to handle thickness of 0.020 ft., the fact that they are small, occupying one-twenty-fifth of the module area, means that they add little to the module weight. After summing all the module weights and given the high module power, we find that we are able to fabricate BTC modules with specific power of 100 watts/kg.

AN EVOLUTION STRATEGY FOR LUNAR NUCLEAR SURFACE POWER **c20**

Lee S. Mason *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 14 p (For primary document see N93-27956 10-91)

Avail: CASI HC A03/MF A03

The production and transmission of electric power for a permanently inhabited lunar base poses a significant challenge which can best be met through an evolution strategy. Nuclear systems offer the best opportunity for evolution in terms of both life and performance. Applicable nuclear power technology options include isotope systems (either radioisotope thermoelectric generators or dynamic isotope power systems) and reactor systems with either static (thermoelectric or thermionic) or dynamic (Brayton, Stirling, Rankine) conversion. A power system integration approach that takes evolution into account would benefit by reduced development and operations cost, progressive flight experience, and simplified logistics, and would permit unrestrained base expansion. For the purposes of defining a nuclear power system evolution strategy, the lunar base development shall consist of four phases: precursor, emplacement, consolidation, and operations. EARTH TO SPACE POWER BEAMING: A NEW NASA TECHNOLOGY INITIATIVE Abstract only **c20**

John D. G. Rather *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 1 p (For primary document see N93-27956 10-91)

Avail: CASI HC A01/MF A03

Laser power beaming from the Earth's surface is an innovative and potentially cost-effective option for reliably providing electrical power for applications such as space transportation, Earth-orbiting satellites, and lunar development. The maturation of laser power beaming technology can support low power applications such as upgraded conventional communications satellites in the present decade. Power beaming systems to support extensive lunar base operations that may consume extremely large amounts of power can be implemented early in the 21st century. The synergistic advantages of high-thrust, high specific-impulse electric propulsion may make enhanced, low cost space logistics an area of unique significance for laser power beaming. Economic forces will continue as a driving factor in the selection of major system elements for both commercial applications as well as the avant-garde national space missions envisioned for the 21st century. As a result, the implementation of laser power beaming systems will only take place if they can demonstrate clear economic benefits without sacrificing performance, personnel safety, or the environment. Similarly, the development activities that are a necessary precursor to any operational system will take place only if key industry and government leaders perceive laser power beaming systems as an achievable goal with realistic payoffs in comparison to competing energy options. This paper summarizes NASA's current research to evaluate laser power beaming systems as they apply to applications of greatest interest, and it includes a summary of the current laser power beaming program within the NASA Headquarters Office of Aeronautics and Space Technology. This research effort will quantify some key technical certainties and uncertainties pertaining to laser power beaming systems appropriate for space applications as well as establish a path of development that includes maturation of key technology components for reliable laser and millimeter wave power beaming systems during the 1990's. The program is known as 'SELENE', an acronym for Space Laser Energy. Author (revised)

FUEL CELL TECHNOLOGY FOR LUNAR SURFACE OPERATIONS c44
Henry J. DeRonck *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 4 p (For primary document see N93-27956 10-91)
Avail: CASI HC A01/MF A03

Hydrogen-oxygen fuel cells have been shown, in several NASA and contractor studies, to be an enabling technology for providing electrical power for lunar bases, outposts, and vehicles. The fuel cell, in conjunction with similar electrolysis cells, comprises a closed regenerative energy storage system, commonly referred to as a regenerative fuel cell (RFC). For stationary applications, energy densities of 1,000 watt-hours per kilograms an order of magnitude over the best rechargeable batteries, have been projected. In this RFC, the coupled fuel cell and electrolyzer act as an ultra-light battery. Electrical energy from solar arrays 'charges' the system by electrolyzing water into hydrogen and oxygen. When an electrical load is applied, the fuel cell reacts the hydrogen and oxygen to 'discharge' usable power. Several concepts for utilizing RFC's, with varying degrees of integration, have been proposed, including both primary and backup roles. For mobile power needs, such as rovers, an effective configuration may be to have only the fuel cell located on the vehicle, and to use a central electrolysis 'gas station'. Two fuel cell technologies are prime candidates for lunar power system concepts: alkaline electrolyte and proton exchange membrane. Alkaline fuel cells have been developed to a mature production power unit in NASA's Space Shuttle Orbiter. Recent advances in materials offer to significantly improve durability to the level needed for extended lunar operations. Proton exchange membrane fuel cells are receiving considerable support for hydrospace and terrestrial transportation applications. This technology promises durability, simplicity, and flexibility.

ELECTRICAL POWER INTEGRATION FOR LUNAR OPERATIONS c20
Gordon Woodcock *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 15 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Electrical power for future lunar operations is expected to range from a few kilowatts for an early human outpost to many megawatts for industrial operations in the 21st century. All electrical power must be imported as chemical, solar, nuclear, or directed energy. The slow rotation of the Moon and consequent long lunar night impose severe mass penalties on solar systems needing night delivery from storage. The cost of power depends on the cost of the power systems the cost of its transportation to the Moon, operating cost, and, of course, the life of the power system. The economic feasibility of some proposed lunar ventures depends in part on the cost of power. This paper explores power integration issues, costs, and affordability in the context of the following representative lunar ventures: (1) early human outpost (10 kWe); (2) early permanent lunar base, including experimental ISMU activities (100 kWe); (3) lunar oxygen production serving an evolved lunar base (500 kWe); (4) lunar base production of specialized high-value products for use on Earth (5 kWe); and (5) lunar mining and production of helium-3 (500 kWe). The schema of the paper is to project likely costs of power alternatives (including integration factors) in these power ranges, to select the most economic, to determine power cost contribution to the product or activities, to estimate whether the power cost is economically acceptable, and, finally, to offer suggestions for reaching acceptability where cost problems exist. OXYGEN PRODUCTION ON THE LUNAR MATERIALS PROCESSING FRONTIER c54
Barbara H. Altenberg *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 14 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

During the pre-conceptual design phase of an initial lunar oxygen processing facility, it is essential to identify and compare the available processes and evaluate them in order to ensure the success of such an endeavor. The focus of this paper is to provide an overview of materials processing to produce lunar oxygen as one part of a given scenario of a developing lunar occupation. More than twenty-five techniques to produce oxygen from lunar materials have been identified. While it is important to continue research on any feasible method, not all methods can be implemented at the initial lunar facility. Hence, it is necessary during the pre-conceptual design phase to evaluate all methods and determine the leading processes for initial focus. Researchers have developed techniques for evaluating the numerous proposed methods in order to suggest which processes would be best to go to the Moon first. As one section in this paper, the recent evaluation procedures that have been presented in the literature are compared and contrasted. In general, the production methods for lunar oxygen fall into four categories: thermochemical, reactive solvent, pyrolytic, and electrochemical. Examples from two of the four categories are described, operating characteristics are contrasted, and terrestrial analogs are presented when possible. In addition to producing oxygen for use as a propellant and for life support, valuable co-products can be derived from some of the processes. This information is also highlighted in the description of a given process. Author (revised)

MAGNETIC BENEFICIATION OF LUNAR SOILS
D. S McKay, R. R. Oder (Exportech Co., Inc., New Kensington, PA.), J. Graf (Michigan Technological Univ., Houghton.), and L. A. Taylor (Tennessee Univ., Knoxville.) *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 9 p (For primary document see N93-27956 10-91)
Avail: CASI HC A02/MF A03

We will present a review of recent laboratory results obtained in dry magnetic separation of one gram samples of the minus 1 mm size fraction of five lunar soils of widely differing maturities. Two highland soils were investigated as potential sources of low iron content feed stocks for space manufacture of metals, including aluminum, silicon, and calcium. Pure anorthite was separated from the diamagnetic fraction of immature highland regolith. Three high titanium mare soils were investigated as potential sources of ilmenite for production of hydrogen and for recovery of He-3. Ilmenite and pyroxene were separated from the paramagnetic fractions of the mare basalts. Agglutinates and other fused soil components containing metallic iron were separated from the strongly magnetic fractions of all soils. We will present conceptual magnetic separation flow sheets developed from the laboratory data and designed for production of anorthite from highland soils and for production of ilmenite from mare soils. Using these flow sheets, we will discuss problems and opportunities associated with the magnetic separation of lunar soils. Separation of high-grade anorthite or other diamagnetic components at moderately high recovery can be achieved in processing immature highland soils. Further, while magnet weight is always an issue in magnetic separation technology, recent developments in both low temperature and high temperature superconductivity present unusual opportunities for magnet design specific to the lunar environment.

PROPELLANT PRODUCTION AND USEFUL MATERIALS: HARDWARE DATA FROM COMPONENTS AND THE SYSTEMS c28
Kumar Ramohalli *In its* Proceedings of the Lunar Materials Technology Symposium Feb. 1992 17 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Research activities at the University of Arizona/NASA Space Engineering Research Center are described; the primary emphasis is on hardware development and operation. The research activities are all aimed toward introducing significant cost reductions through the utilization of resources locally available at extraterrestrial sites. The four logical aspects include lunar, Martian, support, and common technologies. These are described in turn. The hardware realizations are based upon sound scientific principles which are used to screen a host of interesting and novel concepts. Small scale feasibility studies are used as the screen to allow only the most promising concepts to proceed. Specific examples include: kg/day-class oxygen plant that uses CO2 as the feed stock, spent stream utilization to produce methane and 'higher' compounds (using hydrogen from a water electrolysis plant), separation of CO from the CO2, reduction of any iron bearing silicate (lunar soils), production of structural components, smart sensors and autonomous controls, and quantitative computer simulation of

extraterrestrial plants. The most important feature of all this research continues to be the training of high-quality students for our future in space. Author (revised)

METALS PRODUCTION
Theodore S. Beck *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 13 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Existing procedures for design of electrochemical plants can be used for design of lunar processes taking into consideration the differences in environmental conditions. These differences include: 1/6 Earth gravity, high vacuum, solar electrical and heat source, space radiation heat sink, long days and nights, and different availability and economics of materials, energy, and labor. Techniques have already been developed for operation of relatively small scale hydrogen-oxygen fuel cell systems used in the U.S. lunar landing program. Design and operation of lunar aqueous electrolytic process plants appears to be within the state-of-the-art. Finding or developing compatible materials for construction and designing of fused-magma metal winning cells will present a real engineering challenge. Author (revised)

GLASSES, CERAMICS, AND COMPOSITES FROM LUNAR MATERIALS
George H. Beall *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 13 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

A variety of useful silicate materials can be synthesized from lunar rocks and soils. The simplest to manufacture are glasses and glass-ceramics. Glass fibers can be drawn from a variety of basaltic glasses. Glass articles formed from titania-rich basalts are capable of fine-grained internal crystallization, with resulting strength and abrasion resistance allowing their wide application in construction. Specialty glass-ceramics and fiber-reinforced composites would rely on chemical separation of magnesium silicates and aluminosilicates as well as oxides titania and alumina. Polycrystalline enstatite with induced lamellar twinning has high fracture toughness, while cordierite glass-ceramics combine excellent thermal shock resistance with high flexural strengths. If sapphire or rutile whiskers can be made, composites of even better mechanical properties are envisioned. Author (revised)

Avail: CASI HC A03/MF A03

The theme of this paper is that governmental resources will not permit the simultaneous development of all viable lunar materials processing (LMP) candidates. Choices will inevitably be made, based on the results of system integration trade studies comparing candidates to each other for high-leverage applications. It is in the best long-term interest of the LMP community to lead the selection process itself, quickly and practically. The paper is in five parts. The first part explains what systems integration means and why the specialized field of LMP needs this activity now. The second part defines the integration context for LMP -- by outlining potential lunar base functions, their interrelationships and constraints. The third part establishes perspective for prioritizing the development of LMP methods, by estimating realistic scope, scale, and timing of lunar operations. The fourth part describes the use of one type of analytical tool for gaining understanding of system interactions: the input/output model. A simple example solved with linear algebra is used to illustrate. The fifth and closing part identifies specific steps needed to refine the current ability to study lunar base system integration. Research specialists have a crucial role to play now in providing the data upon which this refinement process must be based. Author (revised)

ON-SITE MANUFACTURE OF PROPELLANT OXYGEN FROM LUNAR RESOURCES c31
Sanders D. Rosenberg *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 11 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

The Aerojet Carbothermal Process for the manufacture of oxygen from lunar resources has three essential steps: the reduction of silicate with methane to form carbon monoxide and hydrogen; the reduction of carbon monoxide with hydrogen to form methane and water; and the electrolysis of water to form oxygen and hydrogen. This cyclic process does not depend upon the presence of water or water precursors in the lunar materials; it will produce oxygen from silicates regardless of their precise composition and fine structure. Research on the first step of the process was initiated by determining some of the operating conditions required to reduce igneous rock with carbon and silicon carbide. The initial phase of research on the second step is completed; quantitative conversion of carbon monoxide and hydrogen to methane and water was achieved with a nickel-on-kieselguhr catalyst. The equipment used in and the results obtained from these process studies are reported in detail. Author (revised)

OPTIONS FOR A LUNAR BASE SURFACE ARCHITECTURE
Barney B. Roberts *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 15 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

The Planet Surface Systems Office at the NASA Johnson Space Center has participated in an analysis of the Space Exploration Initiative architectures described in the Synthesis Group report. This effort involves a Systems Engineering and Integration effort to define point designs for evolving lunar and Mars bases that support substantial science, exploration, and resource production objectives. The analysis addresses systems-level designs; element requirements and conceptual designs; assessments of precursor and technology needs; and overall programmatics and schedules. This paper focuses on the results of the study of the Space Resource Utilization Architecture. This architecture develops the capability to extract useful materials from the indigenous resources of the Moon and Mars. On the Moon, a substantial infrastructure is emplaced which can support a crew of up to twelve. Two major process lines are developed: one produces oxygen, ceramics, and metals; the other produces hydrogen, helium, and other volatiles. The Moon is also used for a simulation of a Mars mission. Significant science capabilities are established in conjunction with resource development. Exploration includes remote global surveys and piloted sorties of local and regional areas. Science accommodations include planetary science, astronomy, and biomedical research. Greenhouses are established to provide a substantial amount of food needs. Author (revised)

ENGINEERING DESIGN CONSTRAINTS OF THE LUNAR SURFACE ENVIRONMENT Abstract only c31
D. A. Morrison *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 2 p (For primary document see N93-27956 10-91)
Avail: CASI HC A01/MF A03

Living and working on the lunar surface will be difficult. Design of habitats, machines, tools, and operational scenarios in order to allow maximum flexibility in human activity will require paying attention to certain constraints imposed by conditions at the surface and the characteristics of lunar material. Primary design drivers for habitat, crew health and safety, and crew equipment are: ionizing radiation, the meteoroid flux, and the thermal environment. Secondary constraints for engineering derive from: the physical and chemical properties of lunar surface materials, rock distributions and regolith thicknesses, topography, electromagnetic properties, and seismicity. Protection from ionizing radiation is essential for crew health and safety. The total dose acquired by a crew member will be the sum of the dose acquired during EVA time (when shielding will be least) plus the dose acquired during time spent in the habitat (when shielding will be maximum). Minimizing the dose acquired in the habitat extends the time allowable for EVA's before a dose limit is reached. Habitat shielding is enabling, and higher precision in predicting secondary fluxes produced in shielding material would be desirable. Means for minimizing dose during a solar flare event while on extended EVA will be essential. Early warning

of the onset of flare activity (at least a half-hour is feasible) will dictate the time available to take mitigating steps. Warning capability affects design of rovers (or rover tools) and site layout. Uncertainty in solar flare timing is a design constraint that points to the need for quickly accessible or constructible safe havens. Author (revised)

CLOSED ECOLOGICAL SYSTEMS: FROM TEST TUBES TO EARTH'S BIOSPHERE **c54**
Robert J. Frye and George Mignon *In its* Proceedings of the Lunar Materials Technology Symposium Feb. 1992 19 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Artificially constructed closed ecological systems (CES) have been researched both experimentally and theoretically for over 25 years. The size of these systems have varied from less than one liter to many thousands of cubic meters in volume. The diversity of the included components has a similarly wide range from purely aquatic systems to soil based systems that incorporate many aspects of Earth's biosphere. While much has been learned about the functioning of these closed systems, much remains to be learned. In this paper, we compare and contrast the behavior of closed ecological systems of widely different sizes through an analysis of their atmospheric composition. In addition, we will compare the performance of relatively small CES with the behavior of Earth's biosphere. We address the applicability of small CES as replicable analogs for planetary biospheres and discuss the use of small CES as an experimental milieu for an examination of the evolution of extra-terrestrial colonies. SPE WATER ELECTROLYZERS IN SUPPORT OF THE LUNAR OUTPOST **c54**
J. F. McElroy *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 20 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

During the 1970s, the SPE water electrolyzer, which uses ion exchange membranes as its sole electrolyte, was developed for nuclear submarine metabolic oxygen production. These developments included SPE water electrolyzer operation at up to 3,000 psia and at current densities in excess of 1,000 amps per square foot. The SPE water electrolyzer system is now fully qualified for both the U.S. and U.K. Navies with tens of thousands of system hours accumulated at sea. During the 1980s, the basic SPE water electrolyzer cell structure developed for the Navies was incorporated into several demonstrations for NASA's Space Station Program. Among these were: the SPE regenerative fuel cell for electrical energy storage; the SPE water electrolyzer for metabolic oxygen production; and the high pressure SPE water electrolyzer for reboost propulsion reactant production. In the 1990s, one emphasis will be the development of SPE water electrolyzers for the Lunar Outposts Currently defined potential Lunar Outpost applications for the SPE water electrolyzer include: SPE water electrolyzers for metabolic oxygen and potable water production from reclaimed water; and SPE water electrolyzers operating at high pressure as part of stationary and mobile surface energy storage systems. ASSESSMENT OF THE STATE OF THE ART IN LIFE SUPPORT ENVIRONMENTAL CONTROL FOR SEI **c54**
Charles H. Simonds and Gary P. Noyes *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 14 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

This paper defines the types of technology that would be used in a lunar base for environmental control and life support system and how it might relate to in situ materials utilization (ISMU) for the Space Exploration Initiative (SEI). There are three types of interaction between ISMU and the Environmental Control and Life Support System (ECLSS): (1) ISMU can reduce cost of water, oxygen, and possibly diluent gasses provided to ECLSS--a corollary to this fact is that the availability of indigenous resources can dramatically alter life support technology trade studies; (2) ISMU can use ECLSS waste systems as a source of reductant carbon and hydrogen; and (3) ECLSS and ISMU, as two chemical processing technologies used in spacecraft, can share technology, thereby increasing the impact of technology investments in either area. DUST PROTECTION FOR ENVIRONMENTAL CONTROL AND LIFE SUPPORT SYSTEMS IN THE LUNAR ENVIRONMENT **c54**
Susan Fuhs and Jeffrey Harris (Lockheed Corp., Houston, TX.) *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 12 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Lunar dust is pervasive, and requirements for dust protection will affect both hardware design and operations planning for lunar surface systems. On Earth, mechanical problems caused by particulates include erosive and abrasive effects, clogging of mechanical equipment, and impairment of seals and bonds. In addition, dust tends to degrade the heat rejection properties of contaminated surfaces. All these effects have been observed on the lunar surface as well. This paper discusses the potential applicability of current dust protection methods to the problem of dust protection for the environmental control and life support (ECLS) systems of a lunar base, and highlights areas where development may be necessary. A review of dust problems experienced during the Apollo missions and of additional, ground-based experience with lunar dust provides a baseline for identifying operations and areas where dust may be expected to affect the ECLS systems. Current Earth-based methods of dust protection are identified and the impact of differences between the Earth and lunar environments on these methods is evaluated. Finally, integration of dust protection equipment with ECLS systems equipment is discussed. Author (revised)

INTELLIGENT ROBOTS FOR PLANETARY EXPLORATION AND CONSTRUCTION **c37**
James S. Albus *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 15 p (For primary document see N93-27956 10-91)
Avail: CASI HC A03/MF A03

Robots capable of practical applications in planetary exploration and construction will require realtime sensory-interactive goal-directed control systems. A reference model architecture based on the NIST Real-time Control System (RCS) for real-time intelligent control systems is suggested. RCS partitions the control problem into four basic elements: behavior generation (or task decomposition), world modeling, sensory processing, and value judgment. It clusters these elements into computational nodes that have responsibility for specific subsystems, and arranges these nodes in hierarchical layers such that each layer has characteristic functionality and timing. Planetary exploration robots should have mobility systems that can safely maneuver over rough surfaces at high speeds. Walking machines and wheeled vehicles with dynamic suspensions are candidates. The technology of sensing and sensory processing has progressed to the point where real-time autonomous path planning and obstacle avoidance behavior is feasible. Map-based navigation systems will support long-range mobility goals and plans. Planetary construction robots must have high strength-to-weight ratios for lifting and positioning tools and materials in six degrees-of-freedom over large working volumes. A new generation of cable-suspended Stewart platform devices and inflatable structures are suggested for lifting and positioning materials and structures, as well as for excavation, grading, and manipulating a variety of tools and construction machinery. FLEXIBLE CONTROL TECHNIQUES FOR A LUNAR BASE **c63**
Thomas W. Kraus *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 8 p (For primary document see N93-27956 10-91)
Avail: CASI HC A02/MF A03

The fundamental elements found in every terrestrial control system can be employed in all lunar applications. These elements include sensors which measure physical properties, controllers which acquire sensor data and calculate a control response, and actuators which apply the control output to the process. The unique characteristics of the lunar environment

will certainly require the development of new control system technology. However, weightlessness, harsh atmospheric conditions, temperature extremes, and radiation hazards will most significantly impact the design of sensors and actuators. The controller and associated control algorithms, which are the most complex element of any control system, can be derived in their entirety from existing technology. Lunar process control applications -- ranging from small-scale research projects to full-scale processing plants -- will benefit greatly from the controller advances being developed today. In particular, new software technology aimed at commercial process monitoring and control applications will almost completely eliminate the need for custom programs and the lengthy development and testing cycle they require. The applicability of existing industrial software to lunar applications has other significant advantages in addition to cost and quality. This software is designed to run on standard hardware platforms and takes advantage of existing LAN and telecommunications technology. Further, in order to exploit the existing commercial market, the software is being designed to be implemented by users of all skill levels -- typically users who are familiar with their process, but not necessarily with software or control theory. This means that specialized technical support personnel will not need to be on-hand, and the associated costs are eliminated. Finally, the latest industrial software designed for the commercial market is extremely flexible, in order to fit the requirements of many types of processing applications with little or no customization. This means that lunar process control projects will not be delayed by unforeseen problems or last minute process modifications. The software will include all of the tools needed to adapt to virtually any changes. In contrast to other space programs which required the development of tremendous amounts of custom software, lunar-based processing facilities will benefit from the use of existing software technology which is being proven in commercial applications on Earth.

THE USE OF AUTOMATION AND ROBOTIC SYSTEMS TO ESTABLISH AND MAINTAIN LUNAR BASE OPERATIONS **c63**

Lyman J. Petrosky *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 6 p (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

Robotic systems provide a means of performing many of the operations required to establish and maintain a lunar base. They form a synergistic system when properly used in concert with human activities. This paper discusses the various areas where robotics and automation may be used to enhance lunar base operations. Robots are particularly well suited for surface operations (exterior to the base habitat modules) because they can be designed to operate in the extreme temperatures and vacuum conditions of the Moon (or Mars). In this environment, the capabilities of semi-autonomous robots would surpass that of humans in all but the most complex tasks. Robotic surface operations include such activities as long range geological and mineralogical surveys with sample return, materials movement in and around the base, construction of radiation barriers around habitats, transfer of materials over large distances, and construction of outposts. Most of the above operations could be performed with minor modifications to a single basic robotic rover. Within the lunar base habitats there are a few areas where robotic operations would be preferable to human operations. Such areas include routine inspections for leakage in the habitat and its systems, underground transfer of materials between habitats, and replacement of consumables. In these and many other activities, robotic systems will greatly enhance lunar base operations. The robotic systems described in this paper are based on what is realistically achievable with relatively near term technology. A lunar base can be built and maintained if we are willing. REGOLITH THERMAL ENERGY STORAGE FOR LUNAR NIGHTTIME POWER **c44**

Brian Tillotson *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 8 p Previously announced in IAA as A91-52340 (For primary document see N93-27956 10-91)

Avail: CASI HC A02/MF A03

A scheme for providing nighttime electric power to a lunar base is described. This scheme stores thermal energy in a pile of regolith. Any such scheme must somehow improve on the poor thermal conductivity of lunar regolith in vacuum. Two previous schemes accomplish this by casting or melting the regolith. The scheme described here wraps the regolith in a gas-tight bag and introduces a light gas to enhance thermal conductivity. This allows the system to be assembled with less energy and equipment than schemes which require melting of regolith. A point design based on the new scheme is presented. Its mass from Earth compares favorably with the mass of a regenerative fuel cell of equal capacity.

LUNAR BASE THERMAL MANAGEMENT/POWER SYSTEM ANALYSIS AND DESIGN **c54**

Jerry R. McGhee *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 12 p (For primary document see N93-27956 10-91)

Avail: CASI HC A03/MF A03

A compilation of several lunar surface thermal management and power system studies completed under contract and IR&D is presented. The work includes analysis and preliminary design of all major components of an integrated thermal management system, including loads determination, active internal acquisition and transport equipment, external transport systems (active and passive), passive insulation, solar shielding, and a range of lunar surface radiator concepts. Several computer codes were utilized in support of this study, including RADSIM to calculate radiation exchange factors and view factors, RADIATOR (developed in-house) for heat rejection system sizing and performance analysis over a lunar day, SURPWER for power system sizing, and CRYSTORE for cryogenic system performance predictions. Although much of the work was performed in support of lunar rover studies, any or all of the results can be applied to a range of surface applications. Output data include thermal loads summaries, subsystem performance data, mass, and volume estimates (where applicable), integrated and worst-case lunar day radiator size/mass and effective sink temperatures for several concepts (shielded and unshielded), and external transport system performance estimates for both single and two-phase (heat pumped) transport loops. Several advanced radiator concepts are presented, along with brief assessments of possible system benefits and potential drawbacks. System point designs are presented for several cases, executed in support of the contract and IR&D studies, although the parametric nature of the analysis is stressed to illustrate applicability of the analysis procedure to a wide variety of lunar surface systems. The reference configuration(s) derived from the various studies will be presented along with supporting criteria. A preliminary design will also be presented for the reference basing scenario, including qualitative data regarding TPS concerns and issues. Author (revised)

RECTENNA THERMAL MODEL DEVELOPMENT **c31**

Murall Kadiramangalam, Adrian Alden (Communications Research Centre, Ottawa, Ontario.), and Daniel Speyer *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 13 p (For primary document see N93-27956 10-91)

Avail: CASI HC A03/MF A03

Deploying rectennas in space requires adapting existing designs developed for terrestrial applications to the space environment. One of the major issues in doing so is to understand the thermal performance of existing designs in the space environment. Toward that end, a 3D rectenna thermal model has been developed, which involves analyzing shorted

rectenna elements and finite size rectenna element arrays. A shorted rectenna element is a single element whose ends are connected together by a material of negligible thermal resistance. A shorted element is a good approximation to a central element of a large array. This model has been applied to Brown's 2.45 GHz rectenna design. Results indicate that Brown's rectenna requires redesign or some means of enhancing the heat dissipation in order for the diode temperature to be maintained below 200 C above an output power density of 620 W/sq.m. The model developed in this paper is very general and can be used for the analysis and design of any type of rectenna design of any frequency. Author (revised)

CHOICE OF ANTENNA GEOMETRY FOR MICROWAVE POWER TRANSMISSION FROM SOLAR POWER SATELLITES c20
Seth D. Potter *In* Arizona Univ., Proceedings of the Lunar Materials Technology Symposium Feb. 1992 9 p (For primary document see N93-27956 10-91)
Avail: CASI HC A02/MF A03

A comparison is made between square and circular transmitting antennas for solar power satellite microwave power transmission. It is seen that the exclusion zone around the rectenna needed to protect populations from microwaves is smaller for a circular antenna operating at 2.45 GHz than it is for a square antenna at that frequency. If the frequency is increased, the exclusion zone size remains the same for a square antenna, but becomes even smaller for a circular antenna. Peak beam intensity is the same for both antennas if the frequency and antenna area are equal. The circular antenna puts a somewhat greater amount of power in the main lobe and somewhat less in the side lobes. Since rain attenuation and atmospheric heating remain problems above 10 GHz, it is recommended that future solar power satellite work concentrate on circular transmitting antennas at frequencies of roughly 10 GHz. INVESTIGATION OF SOLAR ACTIVE REGIONS AT HIGH RESOLUTION BY BALLOON FLIGHTS OF THE SOLAR OPTICAL UNIVERSAL POLARIMETER, EXTENDED DEFINITION PHASE Final Report, May 1992 - May 1993
Theodore D. Tarbell May 1993 68 p
(Contract NAS8-39395)
(NASA-CR-192555; NAS 1.26:192555; LMSC/P073417) Avail: CASI HC A04/MF A01

Technical studies of the feasibility of balloon flights of the former Spacelab instrument, the Solar Optical Universal Polarimeter, with a modern charge-coupled device (CCD) camera, to study the structure and evolution of solar active regions at high resolution, are reviewed. In particular, different CCD cameras were used at ground-based solar observatories with the SOUP filter, to evaluate their performance and collect high resolution images. High resolution movies of the photosphere and chromosphere were successfully obtained using four different CCD cameras. Some of this data was collected in coordinated observations with the Yohkoh satellite during May-July, 1992, and they are being analyzed scientifically along with simultaneous X-ray observations. A LOW-MASS FARADAY CUP EXPERIMENT FOR THE SOLAR WIND
A. J. Lazarus, J. T. Steinberg, and R. L. McNutt, Jr. (Johns Hopkins Univ., Laurel, MD.) 1993 9 p
(Contract NAGw-1550; N00039-91-C-001)
(NASA-CR-193210; NAS 1.26:193210) Avail: CASI HC A02/MF A01

Faraday cups have proven to be very reliable and accurate instruments capable of making 3-D velocity distribution measurements on spinning or 3-axis stabilized spacecraft. Faraday cup instrumentation continues to be appropriate for heliospheric missions. As an example, the reductions in mass possible relative to the solar wind detection system about to be flown on the WIND spacecraft were estimated. Through the use of technology developed or used at the MIT Center for Space Research but were not able to utilize for WIND: surface-mount packaging, field-programmable gate arrays, an optically-switched high voltage supply, and an integrated-circuit power converter, it was estimated that the mass of the Faraday Cup system could be reduced from 5 kg to 1.8 kg. Further redesign of the electronics incorporating hybrid integrated circuits as well as a decrease in the sensor size, with a corresponding increase in measurement cycle time, could lead to a significantly lower mass for other mission applications. Reduction in mass of the entire spacecraft-experiment system is critically dependent on early and continual collaborative efforts between the spacecraft engineers and the experimenters. Those efforts concern a range of issues from spacecraft structure to data systems to the spacecraft power voltage levels. Requirements for flight qualification affect use of newer, lighter electronics packaging and its implementation; the issue of quality assurance needs to be specifically addressed. Lower cost and reduced mass can best be achieved through the efforts of a relatively small group dedicated to the success of the mission. Such a group needs a fixed budget and greater control over quality assurance requirements, together with a reasonable oversight mechanism. Author

PHYSICS OF SOLAR ACTIVITY Final Technical Report, 1971 - 1990

Peter A. Sturrock 1993 17 p
(Grant NGL-05-020-272)
(NASA-CR-193139; NAS 1.26:193139) Avail: CASI HC A03/MF A01

The aim of the research activity was to increase our understanding of solar activity through data analysis, theoretical analysis, and computer modeling. Because the research subjects were diverse and many researchers were supported by this grant, a select few key areas of research are described in detail. Areas of research include: (1) energy storage and force-free magnetic field; (2) energy release and particle acceleration; (3) radiation by nonthermal electrons; (4) coronal loops; (5) flare classification; (6) longitude distributions of flares; (7) periodicities detected in the solar activity; (8) coronal heating and related problems; and (9) plasma processes. Work on solar activity forecasting has concentrated on the search for correlations which would allow the forecast of a given cycle with an anticipation larger than 4 to 5 years. The work on solar dynamo modeling involved a formulation of a realistic model of magnetic diffusion. This work is essentially complete and is capable of handling reliably the small scale interaction between convection and magnetic fields. Significant progress has occurred in the Solar Disk Sextant work with the completion of the wedge fabricated by optical contact. A successful balloon flight has yielded 20 gigabytes of data for which reduction and analysis methods are being developed. DTIC

ULTRAVIOLET RESONANCE RADIATION AND THE STRUCTURE OF THE HELIOSPHERE Ph.D. Thesis
Doyle Thomas Hall 1992 244 p
Avail: Univ. Microfilms Order No. DA9307702

The solar system and heliosphere are embedded in a partially ionized medium flowing past the Sun at about 22 km/s. The Voyager and Pioneer 10 spacecraft are travelling upstream and downstream respectively, detecting Lyman alpha radiation resonantly scattered from heliospheric hydrogen. None of the probes has encountered the solar wind termination shock, where the supersonic solar wind is believed to decelerate to subsonic speeds. Penetration of H atoms from the local interstellar flow is the principal source of heliospheric H. Solar gravitation, radiation pressure, and ionization processes largely control the H distribution. However, the presence of the solar wind termination shock is predicted to have two additional effects. H-p charge exchange reactions occurring in the hot, post-shock solar wind plasma should both reduce the number of penetrating H atoms and create a population of suprathermal H atoms. Therefore, heliospheric Lyman alpha emission lines should be composed of narrow and wide components, which should be diagnostic of outer heliospheric structure. Previously unpublished Voyager Cruise Maneuver observations obtained between 15 and 40 AU reveal that upstream Lyman alpha intensities fall as r(exp -0.75+/-0.05). Beyond 15 AU downstream, Pioneer 10 Lyman alpha falls as r(exp -1.07+/-0.1). These trends cannot be simultaneously reproduced using models which do not include the termination shock. The Voyager data suggest an additional source of Lyman alpha in the upstream region beyond 40 AU. This may be due to suprathermal H gas and/or gradients in the H density, both predicted to be associated with the termination shock. A new method of estimating the heliospheric H density between the two Voyager spacecraft is introduced. The results are ambiguous and suffer due to the uncertainty in relative instrumental Lyman alpha sensitivities. Dissert. Abstr.

THE RADIATION PROTECTION PROBLEMS OF HIGH ALTITUDE AND SPACE FLIGHT
R. J. M. Fry 1993 15 p Presented at the Workshop on Radiation Protection Toward the Turn of the Century, Paris, France, 11-13 Jan. 1993
(Contract DE-AC05-84OR-21400)
(DE93-008573; CONF-930181-1) Avail: CASI HC A03/MF A01

This paper considers the radiation environment in aircraft at high altitudes and spacecraft in low earth orbit and in deep space and the factors that influence the dose equivalents. Altitude, latitude and solar cycle are the major influences for flights below the radiation belts. In deep space, solar cycle and the occurrence of solar particle events are the factors of influence. The major radiation effects of concern are cancer and infertility in males. In high altitude aircraft the radiation consists mainly of protons and neutrons, with neutrons contributing about half the equivalent dose. The average dose rate at altitudes of transcontinental flights that approach the polar regions are greater by a factor of about 2.5 than on routes at low latitudes. Current estimates of doses to air crews suggest they are well within the ICRP (1990) recommended dose limits for radiation workers. DOE

AERONAUTICS AND SPACE REPORT OF THE PRESIDENT: FISCAL YEAR 1992 ACTIVITIES
NASA 1993 112 p
Avail: CASI HC A06/MF A02

The annual Aeronautics and Space Report includes a comprehensive description of the programmed activities and the accomplishments of all agencies of the United States in the field of aeronautics and space activities during the preceding calendar year. This year's report was prepared on a fiscal year basis, which is consistent with the budgetary period now used in programs of the Federal Government. The following areas are covered: space launch activities; space science; space flight and space technology; space communications; aeronautical activities; studies of the planet earth; and other aeronautical and space activities. LDEF MATERIALS OVERVIEW **c25**
Bland A. Stein *In its* LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 741-789 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The flight and retrieval of the National Aeronautics and Space Administration's Long Duration Exposure Facility (LDEF) provided an opportunity for the study of the low-Earth orbit (LEO) environment and long-duration space environmental effects (SEE) on materials that is unparalleled in the history of the U.S. Space Program. The 5-year, 9-month flight of LDEF greatly enhanced the potential value of all materials on LDEF to the international SEE community, compared to that of the original 1-year flight plan. The remarkable flight attitude stability of LDEF enables specific analyses of individual and combined effects of LEO environmental parameters on identical materials on the same space vehicle. NASA recognized this potential by forming the LDEF Space Environmental Effects on Materials Special Investigation Group (MSIG) to address the greatly expanded materials and LEO space environment analysis opportunities available in the LDEF structure, experiment trays, and corollary measurements so that the combined value of all LDEF materials data to current and future space missions will be addressed and documented. An overview of the interim LDEF materials findings of the principal investigators and the Materials Special Investigation Group is provided. These revelations are based on observations of LEO environmental effects on materials made in space during LDEF retrieval and during LDEF tray deintegration at the Kennedy Space Center, and on findings of approximately 1.5 years of laboratory analyses of LDEF materials by the LDEF materials scientists. These findings were extensively reviewed and discussed at the MSIG-sponsored LDEF Materials Workshop '91. The results are presented in a format that categorizes the revelations as 'clear findings' or 'obscure preliminary findings' (and progress toward their resolution), plus resultant needs for new space materials developments and ground simulation testing/analytical modeling, in seven categories: materials/environmental parameters and data bases; LDEF contamination; thermal control coatings and protective treatments; polymers and films; polymer-matrix composites; metals, ceramics, and optical materials; and systems-related materials. The utilization of LDEF materials data for future low-Earth orbit missions is also discussed, concentrating on Space Station Freedom. In general, the LDEF data is remarkably consistent; LDEF will provide a 'benchmark' for materials design data bases for satellites in low-Earth orbit. Some materials were

identified to be encouragingly resistant to LEO SEE for 5.8-years; other 'space qualified' materials displayed significant environmental degradation. General contamination levels on LDEF were low, but molecular contamination was widespread; LDEF offers an unprecedented opportunity to provide a unified perspective of unmanned LEO spacecraft contamination mechanisms. New material development requirements for long-term LEO missions were identified and current ground simulation testing methods/data for new, durable materials concepts can be validated with LDEF results. LDEF findings are already being integrated into the design of Space Station Freedom. Author (revised)

OXYGEN ISOTOPES IMPLANTED IN THE LDEF SPACECRAFT **c25**
J. M. Saxton, I. C. Lyon, E. Chatzitheodoridis, P. VanLierde (VG Isotech, Middlewich, England.), J. D. Gilmour, and G. Turner *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 791-796 (For primary document see N93-28254 10-99)
Avail: CASI HC A02/MF A04; 2 functional color pages

Secondary ion mass spectrometry was used to study oxygen implanted in the surface of copper from the Long Duration Exposure Facility (LDEF). Oxidation that occurred in orbit shows a characteristic oxygen isotope composition, depleted in O-18. The measured depletion is comparable to the predicted depletion (45 percent) based on a model of the gravitational separation of the oxygen isotopes. The anomalous oxygen was contained within 10nm of the surface. Tray E10 was calculated to have received 5.14 x 10(exp 21) atoms of oxygen cm(sup -2) during the LDEF mission and so there is sufficient anomalous implanted oxygen present in the surface to obtain a reliable isotopic profile. SILAZINE TO SILICA **c25**
Gale A. Harvey *In its* LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 797-810 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

Thin film silica and/or methyl silicone were detected on most external surfaces of the retrieved LDEF. Both solar ultraviolet radiation and atomic oxygen can convert silicones to silica. Known sources of silicone in or on the LDEF appear inadequate to explain the ubiquitous presence of the silica and silicone films. Hexamethyldisilazane (HMDS) was used as the Challenger tile waterproofing compound for the Challenger/LDEF deployment mission. HMDS is both volatile and chemically reactive at STP. In addition, HMDS releases NH3 which depolymerizes silicone RTV's. Polyurethanes are also depolymerized. Experiments are reported that indicate much of the silicone and silica contamination of LDEF resulted directly or indirectly from HMDS. Author (revised)

STABILITY AND REACTIVITY OF DIMETHYLETHOXYSILANE **c25**
Richard E. Johnson and Douglas I. Ford *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 811-825 Sponsored by NASA. Johnson Space Center (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The chemistry of the compound dimethylethoxysilane (DMES) is discussed especially as it relates to waterproofing silica surfaces. Some of the desirable properties of this compound are that it readily reacts with silica in the vapor phase, it is a low boiling point liquid (54 C), and the by-product of its reaction with silica is the rather inert substances ethanol. It is currently used by NASA to re-waterproof the HRSI shuttle tiles before relaunching the vehicle. Very little information is available on this particular compound in the literature or even on related silane compounds that have both a hydride group and an alkoxy group. Since the close proximity of two groups often drastically affects the chemical behavior of each group, chemical reactions were carried out in the laboratory with DMES to verify the expected behavior of these two functional groups located on DMES. Some of the reactions tested would be potentially useful for quantitative or qualitative measurements on DMES. To study the reactions of DMES with silica surfaces, cabosil was used as a silica substrate because of its high surface area and the ease of detection by infrared spectroscopy as well as other techniques. LDEF POLYMERIC MATERIALS: 10 MONTHS VERSUS 5.8 YEARS OF EXPOSURE **c27**
Philip R. Young, Wayne S. Slemp, and Alice C. Chang (Lockheed Engineering and Sciences Co., Hampton, VA.) *In its* LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 827-847 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The chemical characterization of several polymeric materials which received 10 months of exposure and 5.8 years of exposure on a Row 9 Long Duration Exposure Facility (LDEF) experiment (A0134) is reported. Specimens include fluorinated ethylene propylene (FEP) teflon film, polysulfone film, and graphite fiber reinforced epoxy amd polysulfone matrix composites. The responses of these materials to the two LEO exposures are compared. The results of infrared, thermal, x-ray photoelectron, and scanning electron microscope analyses are reported. Solution property measurements of various molecular weight parameters are presented for the thermoplastic polysulfone materials. Molecular level effects attributable to exposure that were present in 10-month exposed specimens were not found in 5.8-year exposed specimens. This result suggests that increased atomic oxygen fluence toward the end of the LDEF mission may have eroded away selected environmentally induced changes in surface chemistry for 5.8-year exposure specimens. VISCOELASTIC CHARACTERIZATION OF THIN-FILM POLYMERS EXPOSED TO LOW EARTH ORBIT **c27**
Alan Letton, Allan Farrow, and Thomas Strganac *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 849-866 Sponsored in part by Rheometrics, Inc. (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The materials made available through the Long Duration Exposure Facility (LDEF) satellite provide a set of specimens that can be well characterized and have a known exposure history with reference to atomic oxygen and ultraviolet radiation exposure. Mechanical characteristics measured from control samples and exposed samples provide a data base for predicting the behavior of polymers in low earth orbit. Samples of 1.0 mil thick low density polyethylene were exposed to the low earth orbit environment for a period of six years. These materials were not directly exposed to ram atomic oxygen and offer a unique opportunity for measuring the effect of atomic oxygen and UV radiation on mechanical properties with little concern to the effect of erosion. The viscoelastic characteristics of these materials were measured and compared to the viscoelastic characteristics of control samples. To aid in differentiating the effects of changes in crystallinity resulting from thermal cycling, from the effects of changes in chemical structure resulting from atomic oxygen/UV attack to the polymer, a second set of control specimens, annealed to increase crystallinity, were measured as well. The resulting characterization of these materials will offer insight into the impact of atomic oxygen/UV on the mechanical properties of polymeric materials. The viscoelastic properties measured for the control, annealed, and exposed specimens were the storage and loss modulus as a function of frequency and temperature. From these datum is calculated the viscoelastic master curve derived using the principle of time/temperature superposition. Using the master curve, the relaxation modulus is calculated using the method of Ninomiya and Ferry. The viscoelastic master curve and the stress relaxation modulus provide a direct measure of the changes in the chemical or morphological structure. In addition, the effect of these changes on long-term and short-term mechanical properties is known directly. It should be noted that the dependence on directionality for the polymer films was considered since these films were manufactured by a blown-film process. Author (revised)

A STUDY OF THE UV AND VUV DEGRADATION OF FEP **c27**
Graeme A. George, David J. T. Hill, James H. ODonnell, Peter J. Pomery,

and Firas A. Rasoul *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 867-876 (For primary document see N93-28254 10-99)
Avail: CASI HC A02/MF A04; 2 functional color pages

UV and VUV degradation of fluorinated ethylene propylene (FEP) copolymer was studied using electron spin resonance (ESR) spectroscopy, x-ray photoelectron spectroscopy (XPS), and scanning electron microscopy (SEM). The ESR study revealed the formation of a terminal polymer radical. The stability of this radical was investigated under different environments. An XPS study of FEP film exposed to VUV and atomic oxygen showed that oxidation takes place on the polymer surface. The study revealed also that the percentage of CF2 in the polymer surface decreased with exposure time and the percentage of CF, CF3, and carbon attached to oxygen increased. SEM micrographs of FEP film exposed to VUV and atomic oxygen identified a rough surface with undulations similar to sand dunes. Author (revised)

This experiment was designed to measure the effect of near-earth space exposure on three mechanical properties of specially toughened 5208/T300 graphite/epoxy composite materials. The properties measured are elastic modulus, strength, and fracture toughness. Six toughness specimens and nine tensile specimens were mounted on an external frame during the 5.8-year orbit of the Long Duration Exposure Facility (LDEF). Three identical sets of specimens were manufactured at the outset: the flight set, a zero-time non-flight set, and a total-time non-flight set. Author

Degradation of a number of fiber/polymer composites located on the leading and trailing surfaces of LDEF where the atomic oxygen (AO) fluences ranged from 10(exp 22) to 10(exp 4) atoms/cm(sup 2), respectively, was observed and compared. While matrices of the composites on the leading edge generally exhibited considerable degradation and erosion-induced fragmentation, this 'asking' process was confined to the near surface regions because these degraded structures acted as a 'protective blanket' for deeper-lying regions. This finding leads to the conclusion that simple surface coatings can significantly retard AO and other combinations of degrading phenomena in low-Earth orbit. Micrometeoroid and debris particle impacts were not a prominent feature on the fiber composites studied and apparently do not contribute in a significant way to their degradation or alteration in low-Earth orbit. SPACE ENVIRONMENTAL EFFECTS ON LDEF COMPOSITES: A LEADING EDGE COATED GRAPHITE EPOXY PANEL **c24**
Pete E. George, Harry W. Dursch, and Sylvester G. Hill *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 923-939 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The electronics module cover for the leading edge (Row D 9) experiment M0003-8 was fabricated from T300 graphite/934 epoxy unidirectional prepreg tape in a (O(sub 2), +/- 45, O(sub 2), +/- 45, 90, 0)(sub s) layup. This 11.75 in x 16.75 in panel was covered with thermal control coatings in three of the four quadrants with the fourth quadrant uncoated. The composite panel experienced different thermal cycling extremes in each quadrant due to the different optical properties of the coatings and bare composite. The panel also experienced ultraviolet (UV) and atomic oxygen (AO) attack as well as micrometeoroid and space debris impacts. An AO reactivity of 0.99 x 10(exp -24) cm(sup 3)/atom was calculated for the bare composite based on thickness loss. The white urethane thermal control coatings (A276 and BMS 1060) prevented AO attack of the composite substrate. However, the black urethane thermal control coating (Z306) was severely eroded by AO, allowing some AO attack of the composite substrate. An interesting banding pattern on the AO eroded bare composite surface was investigated and found to match the dimensions of the graphite fiber tow widths as prepregged. Also, erosion depths were greater in the darker bands. Five micrometeoroid/space debris impacts were cross sectioned to investigate possible structural damage as well as impact/AO interactions. Local crushing and delaminations were found to some extent in all of the impacts. No signs of coating undercutting were observed despite the extensive AO erosion patterns seen in the exposed composite material at the impact sites. An extensive microcrack study was performed on the panel along with modeling of the thermal environment to estimate temperature extremes and thermal shock. The white coated composite substrate displayed almost no microcracking while the black coated and bare composite showed extensive microcracking. Significant AO erosion was seen in many of the cracks in the bare composite. Author (revised)

THE EFFECTS OF LONG-DURATION SPACE EXPOSURE ON THE MECHANICAL PROPERTIES OF SOME CARBON-REINFORCED RESIN MATRIX COMPOSITES **c24**
Richard F. Vyhnal *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 941-955 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

Long Duration Exposure Facility (LDEF) Experiment A0175 involved the non-instrumented exposure of seven carbon-fiber reinforced resin-matrix advanced composite panels contained in two trays - A7 and A1. These two trays were located, respectively, on the leading and trailing faces of LDEF, obliquely oriented to the RAM (Row 9) and WAKE (Row 3) directions. The identity and location of the seven panels, which consisted of six flat laminates of the following material systems are shown: carbon/epoxy (T300/934), carbon/bismaleimide (T300/F178), and carbon/polyimide (C6000/LARC-160 and C6000/PMR-15), plus one bonded honeycomb sandwich panel (T300/934 face sheets and Nomex core) patterned after the Space Shuttle payload bay door construction. These material systems were selected to represent a range of then-available matrix resins which, by virtue of their differing polymer chemistry, could conceivably exhibit differing susceptibility to the low-earth orbit (LEO) environment. The principal exposure conditions of the LDEF environment at these tray locations are shown. Noteworthy to some of the observations discussed is the four-orders-of magnitude difference in the atomic oxygen (AO) fluence, which made a shallow incidence angle (approximately 22 deg) to Tray A7, while Tray A1 on the trailing face was essentially shielded from AO exposure. This evaluation focused on determining the individual and relative suitability of a variety of resin-matrix composite systems for long-term space structural applications. This was accomplished primarily by measuring and comparing a range of engineering mechanical properties on over 300 test coupons

sectioned from the flight panels and from identical control panels, and tested at ambient and elevated temperatures. This testing was supported by limited physical characterization, involving visual examination of flight panel surface features, measurements of weight loss and warpage, and examination for changes in internal integrity (micro cracking, delamination) by ultrasonic c-scan and polished cross-sections. AN XPS STUDY OF SPACE-EXPOSED POLYIMIDE FILM **c27**
Myung Lee, William Rooney, and James Whiteside *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 957-962 (For primary document see N93-28254 10-99)
Avail: CASI HC A02/MF A04; 2 functional color pages

X-ray photoelectron spectroscopy was used to assess changes induced in the surface chemistry of Kapton H (Du Pont Trademark) polyimide strips exposed to the low Earth orbit environment at the space-end of the LDEF satellite on Experiment A0133. Results from flight specimens are compared to material cut from the same lot and stored at room temperature under standard atmospheric conditions. One notable difference was a nearly two-fold increase in surface oxygen (atom-percent composition) for specimens exposed to the direct space environment as compared to controls. In addition, space exposed specimens contained distinct silicon peaks (2p 103.2 eV and 2s 154.2 eV) in their spectra. These peaks were absent in control spectra. It is likely that the increase in oxygen is associated with the silicon. This is in agreement with reports of widespread silicon contamination throughout the LDEF satellite. Author

SURFACE ANALYSES OF COMPOSITES EXPOSED TO THE SPACE ENVIRONMENT ON LDEF **c24**
Joseph J. Mallon, Joseph C. Uht, and Carol S. Hemminger *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 963-976 (For primary document see N93-28254 10-99)
(Contract F04701-88-C-0089)
Avail: CASI HC A03/MF A04; 2 functional color pages

A series of surface analyses on carbon fiber/poly(arylacetylene) (PAA) matrix composites that were exposed to the space environment on the Long Duration Exposure Facility (LDEF) satellite were conducted. These composite panels were arranged in pairs on both the leading edge and trailing edge of LDEF. None of the composites were catastrophically damaged by nearly six years of exposure to the space environment. Composites on the leading edge exhibited from 25 to 125 microns of surface erosion, but trailing edge panels exhibited no physical appearance changes due to exposure. Scanning electron microscopy (SEM) was used to show that the erosion morphology on the leading edge samples was dominated by crevasses parallel to the fibers with triangular cross sections 10 to 100 microns in depth. The edges of the crevasses were well defined and penetrated through both matrix and fiber. The data suggest that the carbon fibers are playing an important role in crevasse initiation and/or enlargement, and in the overall erosion rate of the composite. X-ray photoelectron spectroscopy (XPS) and energy dispersive x-ray spectroscopy (EDS) results showed contamination from in-flight sources of silicone.

THERMAL EXPANSION BEHAVIOR OF LDEF METAL MATRIX COMPOSITES **c24**
Tuyen D. Le and Gary L. Steckel *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 977-1000 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

The thermal expansion behavior of Long Duration Exposure Facility (LDEF) metal matrix composite materials was studied by (1) analyzing the flight data that was recorded on orbit to determine the effects of orbital time and heating/cooling rates on the performance of the composite materials, and (2) characterizing and comparing the thermal expansion behavior of post-flight LDEF and lab-control samples. The flight data revealed that structures in space are subjected to nonuniform temperature distributions, and thermal conductivity of a material is an important factor in establishing a uniform temperature distribution and avoiding thermal distortion. The flight and laboratory data showed that both Gr/Al and Gr/Mg composites were stabilized after prolonged thermal cycling on orbit. However, Gr/Al composites showed more stable thermal expansion behavior than Gr/Mg composites and offer advantages for space structures particularly where very tight thermal stability requirements in addition to high material performance must be met. SPECTRAL INFRARED HEMISPHERICAL REFLECTANCE MEASUREMENTS FOR LDEF TRAY CLAMPS **c74**
B. K. Cromwell, S. D. Shepherd (Air Force Systems Command, Arnold AFS, TN.), C. W. Pender, and B. E. Wood (Calspan Corp., Arnold AFS, TN.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1001-1014 (For primary document see N93-28254 10-99)
Avail: CASI HC A03/MF A04; 2 functional color pages

Infrared hemispherical reflectance measurements that were made on 58 chromic acid anodized tray clamps from LDEF are described. The measurements were made using a hemiellipsoidal mirror reflectometer with interferometer for wavelengths between 2-15 microns. The tray clamps investigated were from locations about the entire spacecraft and provided the opportunity for comparing the effects of atomic oxygen at each location. Results indicate there was essentially no dependence on atomic oxygen fluence for the surfaces studied, but there did appear to be a slight dependence on solar radiation exposure. The reflectances of the front sides of the tray clamps consistently were slightly higher than for the protected rear tray clamp surfaces. Author (revised)

(Grant NAG1-1186)
Avail: CASI HC A02/MF A04; 2 functional color pages

The surface characterization of chromic acid anodized 6061-T6 aluminum alloy tray clamps has shown differences in surface chemistry depending upon the position on the Long Duration Exposure Facility (LDEF). Water contact angle results showed no changes in wettability of the tray clamps. The overall surface topography of the control, trailing edge(E3) and leading edge(D9) samples was similar. The thickness of the aluminum oxide layer for all samples determined by Auger depth profiling was less than one micron. X-ray photoelectron spectroscopy (XPS) analysis of the tray clamps showed significant differences in the surface composition. Carbon and silicon containing compounds were the primary contaminants detected.

CONTAMINATION ON LDEF: SOURCES, DISTRIBUTION, AND HISTORY **c25**
Gary Pippin and Russ Crutcher *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1023-1031 (For primary document see N93-28254 10-99)
(Contract NAS1-19247)
Avail: CASI HC A02/MF A04; 2 functional color pages

An introduction to contamination effects observed on the Long Duration Exposure Facility (LDEF) is presented. The activities reported are part of Boeing's obligation to the LDEF Materials Special Investigation Group. The contamination films and particles had minimal influence on the thermal performance of the LDEF. Some specific areas did have large changes in optical properties. Films also interfered with recession rate determination by reacting with the oxygen or physically shielding underlying material. Generally, contaminant films lessen the measured recession rate relative to 'clean' surfaces. On orbit generation of particles may be an issue for sensitive optics. Deposition on lenses may lead to artifacts on photographic

images or cause sensors to respond inappropriately. Particles in the line of sight of sensors can cause stray light to be scattered into sensors. Particles also represent a hazard for mechanisms in that they can physically block and/or increase friction or wear on moving surfaces. LDEF carried a rather complex mixture of samples and support hardware into orbit. The experiments were assembled under a variety of conditions and time constraints and stored for up to five years before launch. The structure itself was so large that it could not be baked after the interior was painted with chemglaze Z-306 polyurethane based black paint. Any analysis of the effects of molecular and particulate contamination must account for a complex array of sources, wide variation in processes over time, and extreme variation in environment from ground to launch to flight. Surface conditions at certain locations on LDEF were established by outgassing of molecular species from particular materials onto adjacent surfaces, followed by alteration of those species due to exposure to atomic oxygen and/or solar radiation. CONTAMINATION MEASUREMENTS ON EXPERIMENT M0003 Abstract Only **c25**

Eugene N. Borson and F. Barry Sinsheimer *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1033 (For primary document see N93-28254 10-99)

(Contract F04701-88-C-0089)

Avail: CASI HC A01/MF A04; 2 functional color pages

The contamination monitors on the M0003 experiment consisted of passive sample collectors to measure molecular and particulate deposition. The collectors were placed in the leading and trailing edge trays of M0003. The objective was to quantify the contaminants and determine how contamination affected the other materials in the trays. Duplicate collectors were placed inside the vacuum canisters that provided protection from the launch, ascent, deployment, and recovery environments. Analyses of the samples show small quantities of molecular deposition on both the leading and trailing edge trays. Silicone deposits are negligible. The aluminized fused silica, second surface mirrors showed small changes in solar absorptances. This is consistent with the small quantities of molecular deposits deduced from the FTIR measurements. The results of particle deposition, light scatter, and a micrometeoroid (or debris) impact are presented. Author (revised)

OPTICAL CHARACTERIZATION OF LDEF CONTAMINANT FILM **c74**

Brian K. Blakkolb, Lorraine E. Ryan, Howard S. Bowen (Hughes Aircraft Co., El Segundo, CA.), and Thomas J. Kosic (Hughes Aircraft Co., El Segundo, CA.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1035-1040 (For primary document see N93-28254 10-99)

Avail: CASI HC A02/MF A04; 2 functional color pages

Dark brown molecular film deposits were found at numerous locations on the Long Duration Exposure Facility (LDEF) and have been documented in great detail by several investigators. The exact deposition mechanism for these deposits is as yet unknown, although direct and scattered atomic oxygen, and solar radiation interacting with materials outgassing products have all been implicated in the formation process. Specimens of the brown molecular film were taken from below the flange of the experimental tray located at position D10 on the LDEF. The tray was one of two, comprising the same experiment, the other being located on the wake facing side of the LDEF satellite at position B4. Having access to both trays, we were able to directly compare the effect that orientation with respect to the atomic oxygen flux vector had on the formation of the brown molecular film deposits. The film is thickest on surfaces facing toward the exterior, i.e. the tray corner, as can be seen by comparing the lee and wake aspects of the rivets. The patterns appear to be aligned not with the velocity vector but with the corner of the tray suggesting that flux to the surface is due to scattered atomic oxygen rather than direct ram impingement. The role of scattered flux is further supported by more faint plume patterns on the sides of the tray. The angle of these plumes is strongly aligned with the ram direction but the outline of the deposit implies that incident atoms are scattered by collisions with the edges of the opening resulting in a directed, but diffuse, flux of atomic oxygen to the surface. Spectral reflectance measurements in the 2 to 10 micron (4000 to 1000 wavenumbers) spectral range are presented for the film in the 'as deposited' condition and for the free standing film. The material was analyzed by FTIR (Fourier Transform Infrared) microspectroscopy using gold as the reference standard. The 'as deposited' specimen was on an aluminum rivet taken from beneath the tray flange while the free film was obtained by chipping some of the material from the rivet. The transmission spectrum over the 2 to 10 micron range for the free film is presented. This spectrum appears to be essentially the same as that presented by Crutcher et.al. for films formed at vent sites which faced into the ram direction and suggested to originate from urethanes and silicones used on the LDEF. Banks et. al. state that silicones, when exposed to atomic oxygen, release polymeric scission fragments which deposit on surfaces and form a glassy, dark contaminant layer upon further atomic oxygen exposure and solar irradiation. Author (revised)

EVALUATION OF SEALS, LUBRICANTS, AND ADHESIVES USED ON LDEF **c27**

Harry Dursch, Bruce Keough, and Gary Pippin *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1041-1060 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

A wide variety of seals, lubricants, and adhesives were used on the Long Duration Exposure Facility (LDEF). The results, to date, of the Systems Special Investigation Group (SIG) and the Materials SIG investigation into the effect of the long term low Earth orbit (LEO) exposure on these materials is discussed. Results of this investigation show that if the material was shielded from exposure to LDEF's external environment, the 69 month exposure to LEO had minimal effect on the material. However, if the material was on LDEF's exterior surface, a variety of events occurred ranging from no material change, to changes in mechanical or physical properties, to complete disappearance of the material. The results are from the following sources: (1) visual examinations and/or testing of materials performed by various LDEF experimenters, (2) testing done at Boeing in support of the Materials or Systems SIG investigations, (3) testing done at Boeing on Boeing hardware flown on LDEF. Avail: CASI HC A03/MF A04; 2 functional color pages

The long term effects of the natural and induced space environment on spacecraft surfaces are critically important to future spacecraft - including Space Station Freedom. The damaging constituents of this environment include thermal vacuum, solar ultraviolet radiation, atomic oxygen, particulate radiation, and the spacecraft induced environment. The behavior of materials and coatings in the space environment continues to be a limiting technology for spacecraft and experiments. The Thermal Control Surfaces Experiment (TCSE) was flown on the National Aeronautics and Space Administration (NASA) Long Duration Exposure Facility (LDEF) to study these environmental effects on surfaces-particularly on thermal control surfaces. The TCSE was a comprehensive experiment that combined in-space measurements with extensive pre- and post-flight analyses of thermal control surfaces to determine the effects of exposure to the low Earth orbit space environment. The TCSE is the first space experiment to directly measure the total hemispherical reflectance of thermal control surfaces in the same way they are routinely measured in the laboratory. The trend analyses of selected coatings performed as part of the continuing post-flight analysis of the TCSE are described. A brief description of the TCSE and its mission on LDEF are presented. There are several publications available that describe the TCSE, it's mission on LDEF, and initial results in greater detail. These are listed in the TCSE Bibliography. Author (revised)

Several thermal control paints were flown on the Long Duration Exposure Facility (LDEF), including the white paints Chemglaze A276, S13GLO, and YB-71, and the black paint D-111. The effects of low earth orbit, which includes those induced by UV radiation and atomic oxygen, varied significantly with each paint and its location on LDEF. For example, samples of Chemglaze A276 located on the trailing edge of LDEF darkened significantly due to UV-induced degradation of the paint's binder, while leading edge samples remained white but exhibited severe atomic oxygen erosion of the binder. Although the response of S13GLO to low earth orbit is much more complicated, it also exhibited greater darkening on trailing edge samples as compared to leading edge samples. In contrast, YB-71 and D-111 remained relatively stable and showed minimal degradation. The performance of these paints as determined by changes in their optical and physical properties, including solar absorptance as well as surface chemical changes and changes in surface morphology is examined. It will also provide a correlation of these optical and physical property changes to the physical phenomena that occurred in these materials during the LDEF mission. Author (revised)

ATOMIC OXYGEN EFFECTS ON LDEF EXPERIMENT AO171 **c72**

Ann F. Whitaker, Rachel R. Kamenetzky, Miria M. Finckenor, and Joseph K. Norwood *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1125-1135 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

The Solar Array Materials Passive Long Duration Exposure Facility (LDEF) Experiment (SAMPLE), AO171, contained in total approximately 100 materials and materials processes with a 300 specimen complement. With the exception of experiment solar cell and solar cell modules, all test specimens were weighed before flight, thus allowing an accurate determination of mass loss as a result of space exposure. Since almost all of the test specimens were thermal vacuum baked before flight, the mass loss sustained can be attributed principally to atomic oxygen attack. The atomic oxygen effects observed and measured in five classes of materials is documented. The atomic oxygen reactivity values generated for these materials are compared to those values derived for the same materials from exposures on short term shuttle flights. An assessment of the utility of predicting long term atomic oxygen effects from short term exposures is given. This experiment was located on Row 8 position A which allowed all experiment materials to be exposed to an atomic oxygen fluence of 6.93 x 10(exp 21) atoms/cm(sup 2) as a result of being positioned 38 degrees off the RAM direction. Avail: CASI HC A03/MF A04; 2 functional color pages

Characterization of the behavior of atomic oxygen interaction with materials on the Long Duration Exposure Facility (LDEF) assists in understanding of the mechanisms involved. Thus the reliability of predicting in-space durability of materials based on ground laboratory testing should be improved. A computational model which simulates atomic oxygen interaction with protected polymers was developed using Monte Carlo techniques. Through the use of an assumed mechanistic behavior of atomic oxygen interaction based on in-space atomic oxygen erosion of unprotected polymers and ground laboratory atomic oxygen interaction with protected polymers, prediction of atomic oxygen interaction with protected polymers on LDEF was accomplished. However, the results of these predictions are not consistent with the observed LDEF results at defect sites in protected polymers. Improved agreement between observed LDEF results and predicted Monte Carlo modeling can be achieved by modifying of the atomic oxygen interactive assumptions used in the model. LDEF atomic oxygen undercutting results, modeling assumptions, and implications are presented. Author

SECOND LDEF POST-RETRIEVAL SYMPOSIUM INTERIM RESULTS OF EXPERIMENT A0034 **c27**

Roger C. Linton and Rachel R. Kamenetzky *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1151-1168 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

Thermal control coatings and contaminant collector mirrors were exposed on the leading and trailing edge modules of Long Duration Exposure Facility (LDEF) experiment A0034 to provide a basis of comparison for investigating the role of atomic oxygen in the stimulation of volatile outgassing products.

The exposure of identical thermal ccatings on both the leading and trailing edges of the LDEF and the additional modified exposure of identical coatings under glass windows and metallic covers in each of the flight modules provided multiple combinations of space environmental exposure to the coatings and the contaminant collector mirrors. Investigations were made to evaluate the effects of the natural space and the induced environments on the thermal coatings and the collector mirrors to differentiate the sources of observed material degradation. Two identical flight units were fabricated for the LDEF mission, each of which included twenty-five thermal control coatings mounted in isolated compartments, each with an adjacent contaminant collector mirror mounted on the wall. The covers of the flight units included apertures for each compartment, exposing the thermal coatings directly to the space environment. Six of these compartments were sealed with ultraviolet-grade transmitting quartz windows and four other compartments were sealed with aluminum covers. One module of this passive LDEF experiment, occupying one-sixth of a full tray, was mounted in Tray C9 (leading edge), while the other identical module was mounted in Tray C3 (trailing edge). THE INTERACTION OF ATOMIC OXYGEN WITH COPPER: AN XPS, AES, XRD, OPTICAL TRANSMISSION, AND STYLUS PROFILOMETRY STUDY **c74**

Ganesh N. Raikar (Alabama Univ., Huntsville.), John C. Gregory (Alabama Univ., Huntsville.), Ligia C. Christl (Alabama Univ., Huntsville.), and Palmer N. Peters *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1169-1186 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

The University of Alabama in Huntsville (UAH) experiment A-0114 was designed to study the reaction of material surfaces with low earth orbits (LEO) atmospheric oxygen. The experiment contained 128 one-inch circular samples; metals, polymers, carbons, and semiconductors. Half of these samples were exposed on the front of the Long Duration Exposure Facility (LDEF) and remaining on the rear. Among metal samples, copper has shown some interesting new results. There were two forms of copper samples: a thin film sputter-coated on fused silica and a solid piece of OFHC copper. They were characterized by x-ray and Auger electron spectroscopies, x-ray diffraction, and high resolution profilometry. Cu 2p core level spectra were used to demonstrate the presence of Cu2O and CuO and to determine the oxidation states. Author (revised)

LDEF MATERIALS DATA ANALYSIS: REPRESENTATIVE EXAMPLES **c25**

Gary Pippin and Russ Crutcher *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1187-1199 (For primary document see N93-28254 10-99) (Contract NAS1-19247)

Avail: CASI HC A03/MF A04; 2 functional color pages

Part of the philosophy which guided the examination of hardware from the Long Duration Exposure Facility (LDEF) was that materials present at multiple locations should have fairly high priority for investigation. Properties of such materials were characterized as a function of exposure conditions to obtain as much data as possible for predicting performance lifetimes. Results from examination of several materials from interior locations of LDEF, selected measurements on silverized teflon blanket specimens, and detailed measurements on the copper grounding strap from tray D11 are summarized. Visual observations of interior locations of LDEF made during deintegration at KSC showed apparent changes in particular specimens. This inspection lead to testing of selected nylon clamps, fiberglass shims, and heat shrink tubing from wire harness clamps, and visually discolored silver coated hex nuts. Author (revised)

MATERIALS AND PROCESSES TECHNICAL INFORMATION SYSTEM (MAPTIS) LDEF MATERIALS DATA BASE **c82**

Joan G. Funk, John W. Strickland (BAMSI, Inc., Huntsville, AL.), and John M. Davis (National Aeronautics and Space Administration. Marshall Space Flight Center, Huntsville, AL.) *In its* LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1201-1222 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

A preliminary Long Duration Exposure Facility (LDEF) Materials Data Base was developed by the LDEF Materials Special Investigation Group (MSIG). The LDEF Materials Data Base is envisioned to eventually contain the wide variety and vast quantity of materials data generated from LDEF. The data is searchable by optical, thermal, and mechanical properties, exposure parameters (such as atomic oxygen flux) and author(s) or principal investigator(s). Tne LDEF Materials Data Base was incorporated into the Materials and Processes Technical Information System (MAPTIS). MAPTIS is a collection of materials data which has been computerized and is available to engineers, designers, and researchers in the aerospace community involved in the design and development of spacecraft and related hardware. The LDEF Materials Data Base is described and step-by-step example searches using the data base are included. Information on how to become an authorized user of the system is included.

DATA BASES FOR LDEF RESULTS **c82**

Gail Bohnhoff-Hlavacek *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1223-1233 (For primary document see N93-28254 10-99) (Contract NAS1-19247)

Avail: CASI HC A03/MF A04; 2 functional color pages

The Long Duration Exposure Facility (LDEF) carried 57 experiments and 10,000 specimens for some 200 LDEF experiment investigators. The external surface of LDEF had a large variety of materials exposed to the space environment which were tested preflight, during flight, and post flight. Thermal blankets, optical materials, thermal control paints, aluminum, and composites are among the materials flown. The investigations have produced an abundance of analysis results. One of the responsibilities of the Boeing Support Contract, Materials and Systems Special Investigation Group, is to collate and compile that information into an organized fashion. The databases developed at Boeing to accomplish this task is described.

LONG DURATION EXPOSURE FACILITY EXPERIMENT M0003 DEINTEGRATION OBSERVATION DATA BASE **c82**

S. R. Gyetvay, J. M. Coggi, and M. J. Meshishnek *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium Apr. 1993 p 1235-1246 (For primary document see N93-28254 10-99)

Avail: CASI HC A03/MF A04; 2 functional color pages

The four trays (2 leading edge and 2 trailing edge) of the M0003 materials experiment on the Long Duration Exposure Facility (LDEF) contained 1274 samples from 20 subexperiments. The complete sample complement represented a broad range of materials, including thin film optical coatings, paints, polymer sheets and tapes, adhesives, and composites, for use in various spacecraft applications, including thermal control, structures, optics, and solar power. Most subexperiments contained sets of samples exposed on both the leading and trailing edge trays of LDEF. Each individual sample was examined by high resolution optical microscope during the deintegration of the subexperiments from the M0003 trays. Observations of the post-flight condition of the samples made during this examination were recorded in a computer data base. The deintegration observation data base is available to requesters on floppy disk in 4th Dimension for the Macintosh format. Over 3,000 color macrographs and photomicrographs were shot to complement the observation records and to document the condition of the individual samples and of the M0003 trays. The photographs provide a visual comparison of the response of materials in leading and trailing edge LDEF environments. The Aerospace Corporate Archives is distributing photographs of the samples and hard copies of the database records to the general public upon request. Information on obtaining copies of the data base disks and for ordering photographs and records of specific samples or materials are given.

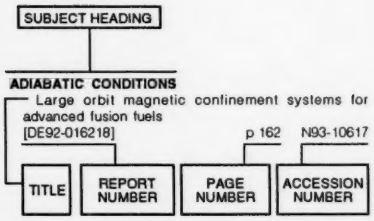
The materials research laboratory program is about 30% of total Materials Science and Engineering effort on the Univ. of Illinois campus. Coordinated efforts are being carried out in areas of structural ceramics, grain boundaries, field responsive polymeric and organic materials, molecular structure of solid-liquid interfaces and its relation to corrosion, and x-ray scattering science. DOE

SUBJECT INDEX

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft [NASA-TM-103719] p 3129 N93-27058
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability [NASA-CR-191015] p 2929 N93-27097
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program [NASA-CR-191064] p 3129 N93-27148

AERODYNAMIC CHARACTERISTICS
Aerodynamic analysis of hypersonic waverider aircraft [NASA-CR-192981] p 2929 N93-27093
Experimental investigation of turbine disk cavity aerodynamics and heat transfer [NASA-CR-193131] p 2943 N93-27115
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings [NASA-CR-193130] p 2930 N93-27150
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
Aerodynamic forces on maglev vehicles [PB93-154813] p 2930 N93-27413
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
Dynamic System Coupler Program (DYSCO 4.1). Volume 1: Theoretical manual [AD-B131156L] p 3098 N93-27531
Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual [AD-B131157L] p 3099 N93-27589
Dynamic System Coupler Program (DYSCO 4.1). Volume 3: User's manual supplement [AD-B131158L] p 3099 N93-27590

AERODYNAMIC COEFFICIENTS
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil p 2933 N93-27440

AERODYNAMIC DRAG
The generation of side force by distributed suction [NASA-CR-193129] p 3039 N93-27151
Aerodynamic forces on maglev vehicles [PB93-154813] p 2930 N93-27413
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil p 2933 N93-27440
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447

AERODYNAMIC FORCES
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
Aerodynamic forces on maglev vehicles [PB93-154813] p 2930 N93-27413

AERODYNAMIC HEAT TRANSFER
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results [NASA-TM-106150] p 3038 N93-27020
Experimental investigation of turbine disk cavity aerodynamics and heat transfer [NASA-CR-193131] p 2943 N93-27115

AERODYNAMIC INTERFERENCE
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport [NASA-TP-3333] p 2938 N93-28070

AERODYNAMIC LOADS
Hypersonic panel flutter in a rarefied atmosphere [NASA-CR-4514] p 2929 N93-27084

AERODYNAMIC NOISE
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program [NASA-CR-191064] p 3129 N93-27148

AERODYNAMIC STABILITY
Airfoil stability in turbulent flow p 2926 N93-27212

AERODYNAMIC STALLING
Effect of underwing frost on transport aircraft takeoff performance [DOT/FAA/CT-TN93/9] p 2940 N93-27252
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Dynamic airfoil stall investigations p 2935 N93-27453

Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456

AERODYNAMICS

Cumulative reports and publications
[NASA-CR-191440] p 3090 N93-27063

Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166

Hypersonics revisited p 2919 N93-27167

JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-002] p 2948 N93-27286

Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289

The Fifth Symposium on Numerical and Physical Aspects of Aerodynamic Flows
[NASA-CR-193000] p 2931 N93-27427

Aerodynamics of a finite wing with simulated ice p 2932 N93-27437

High-lift aerodynamics: Prospects and plans p 2933 N93-27442

Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447

Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450

AEROELASTICITY

A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088

Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214

Strain actuated aeroelastic control p 3059 N93-27899

AERONAUTICAL ENGINEERING

Aeronautics and space report of the President: Fiscal year 1992 activities p 3219 N93-27041

Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056

AERONOMY

NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609

AEROSOLS

A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

AEROSPACE ENGINEERING

Power management and distribution technology p 2983 N93-26978

Radiator technology p 2983 N93-26979

The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021

Aeronautics and space report of the President: Fiscal year 1992 activities p 3219 N93-27041

1991 NASA Life Support Systems Analysis workshop
[NASA-CR-4466] p 3085 N93-27100

1992 NASA Life Support Systems Analysis workshop
[NASA-CR-4467] p 3085 N93-27101

Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166

JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-002] p 2948 N93-27286

Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289

NASA SBIR product catalog, 1991
[NASA-TM-108080] p 3163 N93-27591

Technology for Space Station Evolution. Volume 2: Data Management System/Environmental Control and Life Support Systems
[NASA-TM-108725] p 2963 N93-27704

The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726

Technology for Space Station Evolution. Executive summary and overview
[NASA-TM-108724] p 2972 N93-27854

Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

AEROSPACE ENVIRONMENTS

Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000

Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077

The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106

Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-56
[NASA-TM-107560] p 2956 N93-27538

Rectenna thermal model development p 3022 N93-27986

LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium
[NASA-CP-3194-PT-3] p 3219 N93-28254

Oxygen isotopes implanted in the LDEF spacecraft p 2997 N93-28256

Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268

Spectral infrared hemispherical reflectance measurements for LDEF tray clamps p 3149 N93-28270

Selected results for LDEF thermal control coatings p 3008 N93-28279

Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379

Combined space environment on spacecraft engineering materials
[NASA-CR-192536] p 2996 N93-28407

AEROSPACE INDUSTRY

Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828

AEROSPACE MEDICINE

Space Station Freedom biomedical monitoring and countermeasures: Biomedical facility hardware catalog
[NASA-CR-193156] p 3081 N93-26700

Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945

The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106

Engineering design constraints of the lunar surface environment p 3022 N93-27975

Index of international publications in aerospace medicine
[AD-A262908] p 3084 N93-28306

AEROSPACE PLANES

Hypersonics revisited p 2919 N93-27167

AEROSPACE SAFETY

The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021

EVA and telerobot interaction p 2967 N93-27792

Engineering design constraints of the lunar surface environment p 3022 N93-27975

AEROSPACE SCIENCES

Acronym dictionary
[NASA-CR-193218] p 3164 N93-26900

JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-002] p 2948 N93-27286

Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289

AEROSPACE SYSTEMS

Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171

Parameter identification for nonlinear aerodynamic systems
[NASA-CR-193072] p 2930 N93-27282

Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289

Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058

AEROSPACE TECHNOLOGY TRANSFER

NASA SBIR product catalog, 1991
[NASA-TM-108080] p 3163 N93-27591

AEROSPACE VEHICLES

Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual
[AD-B131157L] p 3099 N93-27589

AEROTHERMODYNAMICS

Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020

The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250

AGE FACTOR

Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851

AGRICULTURE

TS software user manual for the Time Series program and utilities
[PB93-167518] p 3091 N93-26635

Sustainable agriculture and the environment in the humid tropics
[PB93-173920] p 3068 N93-27402

AIR BREATHING ENGINES

The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018

AIR CONDITIONING

The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049

AIR CONDITIONING EQUIPMENT

The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049

Manned lunar surface site p 2951 N93-28033

Lightweight passive microclimate cooling device
[AD-A262262] p 3087 N93-28112

AIR CURRENTS

Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924

AIR FILTERS

Development and evaluation of a cleanable high efficiency steel filter
[DE93-008024] p 3070 N93-28419

AIR FLOW

Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443

Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694

Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model
[DOT/FAA/CT-89/25] p 2941 N93-28055

Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189

AIR LAND INTERACTIONS

Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422

Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611

A hierarchical framework for coupling surface fluxes to atmospheric general circulation models: The homogeneity test
[DE93-004804] p 3072 N93-27612

AIR LAUNCHING

The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018

AIR MASSES

Airmass modification by vertical motion: Discussion and case study
[PB93-160596] p 3079 N93-28134

A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

AIR NAVIGATION

Satellite communications for aeronautical and navigation service p 3023 N93-26648

AIR POLLUTION

Emissions and fuel economy of Federal alternatively fueled fleet vehicles
[PB93-167195] p 3067 N93-26622

Southern global change program. Determining the relationships between air pollutants, climate change, and southern forests
[PB93-176246] p 3069 N93-27410

Technological options for acid rain control
[PB93-173094] p 3069 N93-27527

Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649

AIR PURIFICATION

Manned lunar surface site p 2951 N93-28033

AIR QUALITY

Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607

Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515

Technological options for acid rain control
[PB93-173094] p 3069 N93-27527

AIR SAMPLING

ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407

AIR TRAFFIC CONTROL

Satellite communications for aeronautical and navigation service p 3023 N93-26648

Next Generation Weather Radar (NEXRAD) Principal User Processor (PUP) Operational Test and Evaluation (OT&E) operational test plan
[DOT/FAA/CT-TN93/22] p 3027 N93-28054

AIR WATER INTERACTIONS
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227
AIRBORNE EQUIPMENT
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407
AIRBORNE/SPACEBORNE COMPUTERS
Avionics systems architectures p 2919 N93-27169
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
AIRCRAFT ACCIDENT INVESTIGATION
Aircraft accident report: Takeoff stall in icing conditions. USAIR Flight 405 FOKKER F-28, N485US, LaGuardia Airport, Flushing, New York, 22 March 1992
[PB93-910402] p 2940 N93-27034
Aircraft accident report: Controlled collision with terrain GP Express Airlines, Inc., Flight 861, A Beechcraft C99, N118GP, Anniston, Alabama, 8 June 1992
[PB93-910403] p 2940 N93-27035
AIRCRAFT ACCIDENTS
Annual review of aircraft accident data: US general aviation calendar year 1989
[PB93-160687] p 2940 N93-27033
Aircraft accident report: Takeoff stall in icing conditions. USAIR Flight 405 FOKKER F-28, N485US, LaGuardia Airport, Flushing, New York, 22 March 1992
[PB93-910402] p 2940 N93-27034
Aircraft accident report: Controlled collision with terrain GP Express Airlines, Inc., Flight 861, A Beechcraft C99, N118GP, Anniston, Alabama, 8 June 1992
[PB93-910403] p 2940 N93-27035
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851
AIRCRAFT CARRIERS
Follow-on operational test and evaluation of the NAVSTAR global positioning system air integration/installation program
[AD-A263067] p 2941 N93-27925
AIRCRAFT COMMUNICATION
Satellite communications for aeronautical and navigation service p 3023 N93-26648
AIRCRAFT COMPARTMENTS
Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model
[DOT/FAA/CT-89/25] p 2941 N93-28055
AIRCRAFT CONSTRUCTION MATERIALS
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
AIRCRAFT CONTROL
Robustness enhancement of neurocontroller and state estimator
[NASA-TM-106028] p 2946 N93-26907
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
New adaptive controllers for aircraft p 2921 N93-27180
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
Status of the Fiber Optic Control System Integration (FOCSI) program
[NASA-TM-106151] p 3046 N93-28053
AIRCRAFT DESIGN
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
The development of aircraft in the Lockheed Skunk Works from 1954 to 1991 p 2919 N93-27168
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694
AIRCRAFT DETECTION
The development of aircraft in the Lockheed Skunk Works from 1954 to 1991 p 2919 N93-27168
AIRCRAFT ENGINES
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184
AIRCRAFT EQUIPMENT
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269
AIRCRAFT HAZARDS
Annual review of aircraft accident data: US general aviation calendar year 1989
[PB93-160687] p 2940 N93-27033
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269
AIRCRAFT ICING
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269
AIRCRAFT INSTRUMENTS
Avionics systems architectures p 2919 N93-27169
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269
AIRCRAFT LANDING
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
Coherent systems in the terahertz frequency range: Elements, operation, and examples p 3011 N93-27727
A model-based approach for detection of objects in low resolution passive millimeter wave images
[NASA-CR-193161] p 2943 N93-28418
AIRCRAFT MANEUVERS
Dynamic airfoil stall investigations p 2935 N93-27453
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
AIRCRAFT MODELS
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
AIRCRAFT NOISE
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
A prediction model for noise from low-altitude military aircraft
[AD-A262494] p 3130 N93-27662
AIRCRAFT PERFORMANCE
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252
AIRCRAFT PILOTS
Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851
AIRCRAFT PRODUCTION
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
AIRCRAFT RELIABILITY
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force p 2926 N93-27210
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184
AIRCRAFT SAFETY
Aircraft accident report: Takeoff stall in icing conditions. USAIR Flight 405 FOKKER F-28, N485US, LaGuardia Airport, Flushing, New York, 22 March 1992
[PB93-910402] p 2940 N93-27034
Aircraft accident report: Controlled collision with terrain GP Express Airlines, Inc., Flight 861, A Beechcraft C99, N118GP, Anniston, Alabama, 8 June 1992
[PB93-910403] p 2940 N93-27035
Protection of taxiing traffic in airports through mode S secondary radar technology
[ETN-93-93455] p 2941 N93-28206
AIRCRAFT STRUCTURES
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438
AIRFIELD SURFACE MOVEMENTS
Protection of taxiing traffic in airports through mode S secondary radar technology
[ETN-93-93455] p 2941 N93-28206
AIRFOIL OSCILLATIONS
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
Airfoil stability in turbulent flow p 2926 N93-27212
AIRFOIL PROFILES
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
AIRFOILS
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
A composite structured/unstructured-mesh Euler method for complex airfoil shapes p 2933 N93-27439
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil p 2933 N93-27440
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Dynamic airfoil stall investigations p 2935 N93-27453
Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456
AIRGLOW
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
AIRPORT PLANNING
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636
AIRPORTS
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636
ALCOHOLS
Probe molecule studies: Active species in alcohol synthesis
[DE93-009685] p 2993 N93-26616
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
ALERTNESS
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 3085 N93-28128
ALGEBRA
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
Characteristic sets in commutative algebra: An overview
[MEMO-COSOR-92-24] p 3112 N93-27281
From harmonic to anharmonic oscillators p 3146 N93-27352
Real time process algebra with prefixed integration
[CWI-CS-R9219] p 3114 N93-27362
Termination of term writing by interpretation
[RUU-CS-92-14] p 3114 N93-27381
Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492

Asynchronous communication in process algebra (extended abstract)
[CWI-CS-R9206] p 3098 N93-27551
Regular processes with relative time and silent steps
[CWI-CS-R9231] p 3101 N93-27995
Specification and generation of a lambda-calculus environment
[CWI-CS-R9233] p 3101 N93-27997
A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998
Congruences and quotients in categories of algebras
[RUU-CS-92-23] p 3120 N93-28064
On Zeilberger's algorithm and its q-analogue: A rigorous description
[CWI-AM-R9207] p 3101 N93-28086

ALGORITHMS

Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Parallel solution of high-order numerical schemes for solving incompressible flows
[NASA-TM-4451] p 3106 N93-27040
Positivity-preserving numerical schemes for multidimensional advection
[NASA-TM-106055] p 3038 N93-27091
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Polynomial-time algorithms for single-machine bicriteria scheduling
[MEMO-COSOR-92-21] p 3093 N93-27248
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
Exact classification with two-layered perceptrons
[MEMO-COSOR-92-25] p 3112 N93-27273
Characteristic sets in commutative algebra: An overview
[MEMO-COSOR-92-24] p 3112 N93-27281
On steady, inviscid shock waves at continuously curved, convex surfaces
[CWI-NM-R9202] p 3039 N93-27299
On the treewidth and pathwidth of permutation graphs
[RUU-CS-92-13] p 3113 N93-27305
Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB
[CWI-NM-R9213] p 3031 N93-27367
Using cached functions and constructors for incremental attribute evaluation
[RUU-CS-92-11] p 3094 N93-27369
A tourist guide through treewidth
[RUU-CS-92-12] p 3114 N93-27370
Associative matching for linear terms
[CWI-CS-R9224] p 3094 N93-27377
Verification of parameterised synchronous concurrent algorithms with OBJ3: The pixel planes architecture revisited
[CWI-CS-R9225] p 3095 N93-27378
Finding k disjoint paths in a directed planar graph
[CWI-BS-R9206] p 3095 N93-27379
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
User's guide for the algorithm testing system/version 1.1
[PB93-175990] p 3096 N93-27408
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
Survey of continuities of curves and surfaces
[CWI-CS-R9202] p 3097 N93-27495
More examples in MANIFOLD
[CWI-CS-R9214] p 3097 N93-27502
Virtual data structures
[RUU-CS-92-16] p 3097 N93-27506
Massively parallel searching for better algorithms
[DE93-009501] p 3107 N93-27623
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
A parallel divide and conquer algorithm for the generalized real symmetric definite tridiagonal eigenproblem
[AD-A262297] p 3099 N93-27678
The identification of analytical device models
[ISBN-90-6275-764-2/CIP] p 3100 N93-27874
Some experiments in transforming towards parallel executability
[TR-92-08] p 3107 N93-27903
The set of super-stable marriages forms a distributive lattice
[MEMO-1052] p 3125 N93-27907
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
On partitions into unequal squares and related problems
[MEMO-1055] p 3120 N93-28003
The LAZYRMS: Avoiding work in the ATMS
[RUU-CS-92-20] p 3101 N93-28062
Concurrent data objects in quadratic space
[CS-9112] p 3101 N93-28066
On Zeilberger's algorithm and its q-analogue: A rigorous description
[CWI-AM-R9207] p 3101 N93-28086
Treewidth and pathwidth of permutation graphs
[RUU-CS-92-30] p 3101 N93-28093
A linear time algorithm for finding tree-decompositions of small treewidth
[RUU-CS-92-27] p 3102 N93-28103
Adaptive filtering methods: On methods to use a priori information in order to reduce complexity while maintaining convergence properties
[ISBN-90-9005143-0] p 3121 N93-28109
The Gribov problem in the frame of stochastic quantization
[SSCL-PREPRINT-740] p 3157 N93-28194
Faster Phong shading
[CWI-CS-R9228] p 3103 N93-28221
Sparse matrix algorithms on distributed memory multiprocessors
[DE93-009368] p 3103 N93-28231
Standard families of algorithms
[REPT-92-20] p 3104 N93-28389
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441
Using pseudo Kalman-filters in the presence of constraints application to sensing behaviors
[INRIA-RR-1669] p 3122 N93-28442
Restoration of incomplete contour images using Markov random fields
[INRIA-RR-1688] p 3126 N93-28445

ALKALI METALS

Atomic supersymmetry p 3146 N93-27353

ALKALINE BATTERIES

Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
Fuel cell technology for lunar surface operations p 3067 N93-27965

ALL-WEATHER LANDING SYSTEMS

Coherent systems in the terahertz frequency range: Elements, operation, and examples p 3011 N93-27727

ALLOCATIONS

Complexity of scheduling multiprocessor tasks with prespecified processor allocations
[MEMO-COSOR-92-32] p 3106 N93-27361

ALPHA PARTICLES

Description of alpha-nucleus interaction cross sections for cosmic ray shielding studies
[NASA-TP-3285] p 3138 N93-26905
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259

ALTERNATING CURRENT

Growing the Space Station's electrical power plant p 2969 N93-27810
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327

ALUMINATES

Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944

ALUMINIDES

Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313

ALUMINUM

Cosmology with liquid mirror telescopes p 3171 N93-26708
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313

ALUMINUM ALLOYS

On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877
Surface characterization of selected LDEF tray clamps p 3001 N93-28271
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371

ALUMINUM ARSENIDES

Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056

ALUMINUM COATINGS

The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019

ALUMINUM GALLIUM ARSENIDES

Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Resonant tunneling diodes as sources for millimeter and submillimeter wavelengths p 3018 N93-27772
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056

ALUMINUM OXIDES

Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938

ALUMINUM SILICATES

Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676

ALUMINUM-LITHIUM ALLOYS

Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530

AMINES

New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351

AMMUNITION

Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207

AMORPHOUS MATERIALS

Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301

AMORPHOUS SILICON

Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Diamond composite films for protective coatings on metals and method of formation
[NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426

AMPLIFICATION

Three-dimensional compressible stability-transition calculations using the spatial theory p 2931 N93-27431

AMPLIFIER DESIGN

Six degree of freedom active vibration damping for space application
[NASA-CR-193028] p 3056 N93-27165

ANALOG DATA

Analog signal isolation techniques
[DE93-008059] p 3147 N93-27524

ANALYSIS OF VARIANCE
A comparison of variable selection criteria for multiple linear regression: A second simulation study
[AD-A262512] p 3125 N93-27664
ANDROMEDA GALAXY
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867
ANGLE OF ATTACK
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
ANGULAR DISTRIBUTION
Adjustment of TIROS operational vertical sounder data to a vertical view
[NOAA-TR-NESDIS-64] p 3071 N93-27059
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
ANGULAR MOMENTUM
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Attitude stabilization of bias momentum satellites p 2923 N93-27195
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331
ANISOTROPY
Magnetic thin films and nanostructures: Anisotropy, microstructure, and their inter-relationship
[DE93-007714] p 3002 N93-26611
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
ANNEALING
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
ANNIHILATION REACTIONS
Two photon annihilation operators and squeezed vacuum p 3143 N93-27326
ANNUAL VARIATIONS
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method p 3074 N93-28249
ANNULAR NOZZLES
Analytical and experimental investigation of annular propulsive nozzles
[AD-A262685] p 2945 N93-28391
ANTENNA ARRAYS
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 2
[AD-A262098] p 3027 N93-27670
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 1
[AD-A262099] p 3027 N93-27671
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Parallel and series fed microstrip array with high efficiency and low cross polarization
[NASA-CASE-NPO-18678-1-CU] p 3029 N93-28422
ANTENNA DESIGN
Development of novel ferrite antennas
[AD-A261690] p 3022 N93-26629
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017
Moment method analysis of linearly tapered slot antennas
[NASA-CR-191474] p 2955 N93-27261
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. A: Multiband dipole antenna
[AD-A262010] p 3027 N93-27668
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 2
[AD-A262098] p 3027 N93-27670
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 1
[AD-A262099] p 3027 N93-27671
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Progress in integrated-circuit horn antennas for receiver applications. Part 1: Antenna design p 3015 N93-27755
Zone plate lens antennas for millimeter and submillimeter wavelengths p 3016 N93-27757
Double-slot antennas on extended hemispherical dielectric lenses p 3016 N93-27759
Choice of antenna geometry for microwave power transmission from solar power satellites p 2988 N93-27987
ANTENNA FEEDS
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
ANTENNA RADIATION PATTERNS
Development of novel ferrite antennas
[AD-A261690] p 3022 N93-26629
Wide-angle radiation pattern calculation of paraboloidal reflector antennas: A comparative study
[EUT-91-E-252] p 3026 N93-27226
Moment method analysis of linearly tapered slot antennas
[NASA-CR-191474] p 2955 N93-27261
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Double-slot antennas on extended hemispherical dielectric lenses p 3016 N93-27759
ANTIMISSILE DEFENSE
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
Midcourse Space Experiment (MSX) environmental assessment
[AD-A262460] p 3127 N93-27830
ANTIMISSILE MISSILES
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
ANTIPARTICLES
Quons, an interpolation between Bose and Fermi oscillators p 3141 N93-27312
Mass spectra of the particle-antiparticle system with a Dirac oscillator interaction p 3146 N93-27351
ANTIPROTONS
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618
ANTISEPTICS
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
ANTISHIP MISSILES
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
APERTURES
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
APEXES
Cycles containing all vertices of maximum degree p 3115 N93-27474
APPLICATIONS OF MATHEMATICS
Cumulative reports and publications
[NASA-CR-191440] p 3090 N93-27063
APPLICATIONS PROGRAMS (COMPUTERS)
Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Rocketdyne/Westinghouse nuclear thermal rocket engine modeling p 2980 N93-26955
NEP systems model p 2984 N93-26987
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Aerodynamic analysis of hypersonic waverider aircraft
[NASA-CR-192981] p 2929 N93-27093
User's guide for the algorithm testing system/version 1.1
[PB93-175990] p 3096 N93-27408
Adaptive EAGLE dynamic solution adaptation and grid quality enhancement p 2937 N93-27464
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545
Qualitative model-based diagnostics for rocket systems
[NASA-TM-106234] p 2956 N93-28052
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181
A programming tool for detailed analysis of FORTRAN operation counts
[DE93-009606] p 3105 N93-28455
APPROACH CONTROL
Minimum effort interception of multiple targets p 2925 N93-27205
APPROXIMATION
Asymptotic estimates of Stirling numbers
[CWI-AM-R9204] p 3113 N93-27310
Quantized discrete space oscillators p 3146 N93-27349
Approximate analysis of an M/G/1 priority queue with priority changes due to impatience
[CWI-BS-R9202] p 3127 N93-27606
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883
An algorithm for determining the approximation orders of multivariate periodic spline spaces
[MEMO-1061] p 3101 N93-28012
Bootstrapping multivariable U-quantiles and related statistics
[CWI-BS-R9215] p 3126 N93-28091
AQUEOUS SOLUTIONS
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604

Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359

ARC JET ENGINES
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216

ARC WELDING
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253

ARCHIPELAGOES
Atoll Research Bulletin numbers 355-364: 40th anniversary issue
[PB93-169654] p 3062 N93-27421

ARCHITECTURE (COMPUTERS)
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
Computational modeling of nuclear thermal rockets p 2980 N93-26956
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Rutger's CAM2000 chip architecture
[NASA-CR-193078] p 3151 N93-27094
Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289
The design of chip architectures for accurate inner product computation
[ISBN-9-09-005204-6] p 3090 N93-27372
Validated fault tolerant architectures for Space Station p 2964 N93-27707
Consistency management for virtually indexed caches
[AD-A261952] p 3100 N93-27920
An architecture for interactive raster graphics
[CWI-CS-R9229] p 3102 N93-28102
Generic Application Layer for PC-controlled VME measuring systems (GAL PC-VME)
[OEFZS-4630] p 3103 N93-28204
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222

ARGON
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110

ARIANE LAUNCH VEHICLE
European space programme p 2920 N93-27174
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188

ARMED FORCES (UNITED STATES)
Summer research program (1992). Graduate student
[AD-A261971] p 3163 N93-28223

ARRAYS
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774

ARSENIC COMPOUNDS
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114

ARTIFICIAL GRAVITY
Artificial gravity experiment satellites p 2949 N93-28018

ARTIFICIAL INTELLIGENCE
Automata network models of galaxy evolution p 3201 N93-26879
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
AI in space: Past, present, and possible futures p 3111 N93-27988
The LAZYRMS: Avoiding work in the ATMS
[RUU-CS-92-20] p 3101 N93-28062
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160
Constraints logic programming in knowledge-based planning domains
[AD-A262958] p 3104 N93-28291
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395

ARTIFICIAL SATELLITES
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite p 2924 N93-27199
Approaches to dealing with meteoroid and orbital debris protection on the Space Station p 2971 N93-27838
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395

ASCENT TRAJECTORIES
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
MASTRE trajectory code update to automate flight trajectory design, performance predictions, and vehicle sizing for support of shuttle and shuttle derived vehicles: Programmers manual
[NASA-CR-192558] p 2954 N93-28321

ASIA
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641

ASSEMBLY LANGUAGE
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182

ASSESSMENTS
User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs
[RTP/2180/01] p 3099 N93-27852

ASTEROIDS
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
Composition of near-Earth asteroids p 3205 N93-26690
Spacewatch discovery of near-Earth asteroids p 3205 N93-26691
The Steward Observatory asteroid relational database p 3168 N93-26698
Near-Earth asteroids: Observer alert network and physical observations p 3168 N93-26699
Vertical landing on an asteroid p 2924 N93-27202
Value of space defenses
[DE93-003813] p 3127 N93-28295

ASTRO MISSIONS (STS)
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Shuttle PRCS plume contamination analysis for Astro-2 mission
[NASA-CR-193101] p 2986 N93-27240

ASTROMETRY
Removing Malmquist bias from linear regressions p 3122 N93-26872

ASTRONOMICAL CATALOGS
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Analysis of the Einstein sample of early-type galaxies p 3179 N93-26754
IRAS studies of galactic supershells p 3183 N93-26776
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883
Cordoba Durchmusterung, volume 1
[NASA-RP-1299-VOL-1] p 3170 N93-27116
Cordoba Durchmusterung, volume 2
[NASA-RP-1299-VOL-2] p 3170 N93-27117
Cordoba Durchmusterung, volume 3
[NASA-RP-1299-VOL-3] p 3170 N93-27118
Cordoba Durchmusterung, volume 4
[NASA-RP-1299-VOL-4] p 3170 N93-27119
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
Bonner Durchmusterung, volume 1
[NASA-RP-1297-VOL-1] p 3170 N93-27382
Bonner Durchmusterung, volume 2
[NASA-RP-1297-VOL-2] p 3170 N93-27383
Washington Double Star Catalog Cross Index (1950 position sort)
[NASA-RP-1302] p 3171 N93-27533
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky
[NASA-CR-193075] p 3171 N93-28414

ASTRONOMICAL MODELS
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Primeval galaxies in the sub-mm and mm p 3172 N93-26713
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Galaxy tracers in N-body simulations p 3176 N93-26732
Subclustering in the hierarchical model of galaxy formation p 3176 N93-26734
Gas dynamic simulations of galaxy formation p 3176 N93-26736
The galaxy velocity field and CDM models p 3176 N93-26737
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744
Starburst models of merging galaxies p 3183 N93-26778
High velocity clouds in nearby disk galaxies p 3187 N93-26804
Galactic oscillations p 3188 N93-26808
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
Numerical simulations of bent, disrupted radio jets p 3188 N93-26813
The critical density for star formation in HII galaxies p 3189 N93-26817
Numerical simulations of galactic wakes p 3189 N93-26818
Models of the Cartwheel ring galaxy: Spokes and starbursts p 3190 N93-26823
Dissipative merging of galaxies p 3191 N93-26827
A new observational and numerical study of tidal interactions in M81-M82-NGC3077 system p 3192 N93-26830
The nature of the evolution of galaxies by mergers p 3192 N93-26831
A numerical simulation of galaxy subcluster mergers p 3192 N93-26833
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834
Automata network models of galaxy evolution p 3201 N93-26879

ASTRONOMICAL OBSERVATORIES
The Steward Observatory asteroid relational database p 3168 N93-26698
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
Astrophysics science operations in the Great Observatories era p 3165 N93-27044
Characterization of lunar surface materials for use in construction p 3211 N93-27959

ASTRONOMICAL PHOTOGRAPHY
How to get unlimited observing time on a 4 metre telescope p 3171 N93-26707

ASTRONOMICAL PHOTOMETRY
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
The nature of faint emission-line galaxies p 3173 N93-26716
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Distant radio galaxies in the near IR p 3177 N93-26742
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
Declining rotation curves in interacting galaxies p 3192 N93-26829
Multicolor photometry of x ray selected Abell clusters p 3195 N93-26846
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Multi-filter spectrophotometry simulations p 3201 N93-26881
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
A broadband THz receiver for low background space applications p 3020 N93-27782
The galactic center stellar population in the near infrared p 3204 N93-28080

ASTRONOMICAL SPECTROSCOPY
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
Two searches for primeval galaxies p 3172 N93-26714
The nature of faint emission-line galaxies p 3173 N93-26716
Two protogalaxy candidates in one night p 3173 N93-26717
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Environmental influences on galaxy evolution p 3175 N93-26727
Globular cluster formation in merging galaxies? p 3175 N93-26729
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741

Distant radio galaxies in the near IR
p 3177 N93-26742
Deep, wide-field, multi-band imaging of z approximately equal to 0.4 clusters and their environs
p 3195 N93-26848
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
Long slit spectroscopy of NGC 5506
p 3198 N93-26861
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
The disk-halo interface in edge-on spirals
p 3198 N93-26865
Emission line gas in early-type galaxies: Kinematics and physical conditions p 3200 N93-26874
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds
p 3201 N93-26878
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742

ASTRONOMY
Astrophysics science operations in the Great Observatories era p 3165 N93-27044

ASTROPHYSICS
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
Astrophysics science operations in the Great Observatories era p 3165 N93-27044
An astrophysics data program investigation of spatial structure of supernova remnants
[NASA-CR-193104] p 3205 N93-28409

ASYMMETRY
Axisymmetric vortex sheet roll-up
p 2938 N93-28078
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352

ASYMPTOTES
Hyperasymptotics and the Stokes' phenomenon
[CWI-AM-R9206] p 3120 N93-26085

ASYMPTOTIC METHODS
Asymptotic estimates of Stirling numbers
[CWI-AM-R9204] p 3113 N93-27310
Curvilinear geometry transport discretizations in the thick diffusion limit
[DE93-007109] p 3117 N93-27615

ASYMPTOTIC PROPERTIES
An analytical solution to the consistency problem for the Littlewood model in software reliability
[CWI-BS-R9129] p 3096 N93-27392
On the asymptotic behavior of discrete events systems
[ISBN-90-74488-01-3] p 3125 N93-27876

ASYMPTOTIC SERIES
On the accurate long-time solution of the wave equation in exterior domains: Asymptotic expansions and corrected boundary conditions
[NASA-TM-106117] p 3111 N93-27068
Asymptotic estimates of Stirling numbers
[CWI-AM-R9204] p 3113 N93-27310

ATLANTIC OCEAN
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534

ATLANTIS (ORBITER)
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285

ATMOSPHERIC ATTENUATION
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385

ATMOSPHERIC BOUNDARY LAYER
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422

ATMOSPHERIC CHEMISTRY
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365

ATMOSPHERIC CIRCULATION
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
The representativeness of various clouds as tracers of the flow p 3075 N93-26992
Research summary
[NASA-CR-193082] p 3129 N93-27127
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227

ATMOSPHERIC COMPOSITION
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609

ATMOSPHERIC DIFFUSION
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607

ATMOSPHERIC EFFECTS
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions
[NASA-CR-193158] p 3064 N93-28417

ATMOSPHERIC ELECTRICITY
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds
[AD-A262673] p 3078 N93-28115

ATMOSPHERIC GENERAL CIRCULATION MODELS
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611
A hierarchical framework for coupling surface fluxes to atmospheric general circulation models: The homogeneity test
[DE93-004804] p 3072 N93-27612

ATMOSPHERIC MODELS
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

ATMOSPHERIC PHYSICS
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609

ATMOSPHERIC PRESSURE
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003

ATMOSPHERIC RADIATION
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137

ATMOSPHERIC SCATTERING
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385

ATMOSPHERIC SOUNDING
Derivation of total ozone amount from NOAA/TOVS data p 3071 N93-26997
Adjustment of TIROS operational vertical sounder data to a vertical view
[NOAA-TR-NESDIS-64] p 3071 N93-27059
A noise level analysis of special multiple-spin VAS data during storm-fest
[NOAA-TR-NESDIS-65] p 3071 N93-27079
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
EOS/AMSU-A NASA/Aerojet Interface Meeting
[NASA-TM-108234] p 3063 N93-27286
CSU FIRE 2 cirrus field experiment: Description of field deployment phase
[NASA-CR-193162] p 3077 N93-27292
Coherent systems in the terahertz frequency range: Elements, operation, and examples
p 3011 N93-27727
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185

ATMOSPHERIC TEMPERATURE
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185

ATMOSPHERIC TURBULENCE
Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137

ATOLLS
Atoll Research Bulletin numbers 355-364: 40th anniversary issue
[PB93-169654] p 3062 N93-27421

ATOMIC BEAMS
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335

ATOMIC COLLISIONS
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface
p 2928 N93-27222
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520

ATOMIC EXCITATIONS
Nonlinear optics in three level atomic systems
[AD-A262793] p 3148 N93-28376

ATOMIC PHYSICS
Atomic supersymmetry p 3146 N93-27353
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456

ATOMIC SPECTRA
The Lyman alpha forest of the high-z quasar 0000-263
p 3203 N93-26890
Bibliography on atomic line shapes and shifts
[PB93-173433] p 3132 N93-27529

ATOMIC STRUCTURE
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
Electronic structure theory of alloy phase stability
[DE93-009547] p 3000 N93-28232
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437

ATOMIZERS
Velocity and drop size measurements in a swirl-stabilized, combusting spray
[NASA-TM-106130] p 2944 N93-27130
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223

ATOMS
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345

ATROPHY
Growth factor involvement in tension-induced skeletal muscle growth
[NASA-CR-193023] p 3083 N93-27113

ATTENTION
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 3085 N93-28128

ATTENUATION
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178
ATTENUATORS
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324
ATTITUDE CONTROL
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814
Attitude control and stabilization technology discipline p 2972 N93-27855
ATTITUDE INDICATORS
Attitude stabilization of bias momentum satellites p 2923 N93-27195
ATTITUDE STABILITY
Attitude stabilization of bias momentum satellites p 2923 N93-27195
Attitude control and stabilization technology discipline p 2972 N93-27855
AURORAL IONIZATION
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
AURORAL ZONES
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
AURORAS
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
AUSTENITE
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
AUTOCLAVES
ASRM test report: Autoclave cure process development
[NASA-CR-192535] p 2986 N93-27157
AUTOMATA THEORY
Automata network models of galaxy evolution p 3201 N93-26879
Automatic management of parallel and distributed system resources p 2965 N93-27715
AUTOMATIC CONTROL
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Automation of Space Station module power management and distribution system p 2969 N93-27816
Agent-independent planning p 2970 N93-27822
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Intelligent robots for planetary exploration and construction p 3054 N93-27980
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Lunar surface roving explorer p 2952 N93-28042
Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305
AUTOMATIC PILOTS
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis
[AD-A262151] p 2946 N93-27546
AUTOMATION
Advanced automation of a prototypic thermal control system for Space Station p 2972 N93-27846
AUTOMOBILE FUELS
Emissions and fuel economy of Federal alternatively fueled fleet vehicles
[PB93-167195] p 3067 N93-26622
AUTOMOBILES
Mobile robot navigation using qualitative reasoning
[DE93-008277] p 3109 N93-27104
AUTOMORPHISMS
Which Q-analogue of the squeezed oscillator? p 3142 N93-27320
On the spring and mass of the Dirac oscillator p 3146 N93-27355
AUTONOMOUS NAVIGATION
Mobile robot navigation using qualitative reasoning
[DE93-008277] p 3109 N93-27104
Intelligent robots for planetary exploration and construction p 3054 N93-27980
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460
AVALANCHE DIODES
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
AVIATION METEOROLOGY
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
A statistical characterization of Denver-area microbursts
[AD-A262127] p 3078 N93-27675
AVIONICS
Avionics systems architectures p 2919 N93-27169
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
AWARDS
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285
AXIAL STRESS
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234
AXISYMMETRIC BODIES
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer p 2937 N93-27462
AXISYMMETRIC FLOW
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250

B

B STARS
Two searches for primeval galaxies p 3172 N93-26714
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
Long slit spectroscopy of NGC 5506 p 3198 N93-26861
BACKGROUND NOISE
Motion-sensitive optical correlator
[NASA-CASE-NPO-18769-1-CU] p 3148 N93-28133
BACKGROUND RADIATION
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Correlation between low level fluctuations in the x ray background and faint galaxies p 3179 N93-26752
The two-point correlation function of randomly distributed Lyman alpha clouds p 3181 N93-26767
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772
BACKSCATTERING
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
BACKWARD FACING STEPS
Calculations of turbulent separated flows
[NASA-TM-106154] p 3039 N93-27161
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
BACTERIA
Biological conversion of synthesis gas
[DE93-008552] p 3064 N93-26628
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199
Characterization and classification of strains of Francisella tularensis isolated in the central Asian focus of the Soviet Union and in Japan
[FOA-B-40421-4.4] p 3082 N93-28200
Use of RNA hybridization in the diagnosis of a case of ulceroglandular tularemia
[FOA-B-40422-4.4] p 3083 N93-28212
BALANCING
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
BALLISTIC MISSILES
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
BALLOON FLIGHT
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029
BALMER SERIES
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883
BANACH SPACE
A singular perturbation theorem for evolution equations and time-scale arguments for structured population models
[CWI-AM-R9201] p 3112 N93-27295
BAND STRUCTURE OF SOLIDS
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Mean field phase diagram of two band tJ model for CuO2 layers
[SSCL-PREPRINT-764] p 3151 N93-27581
BARENTS SEA
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0)
[AD-A262794] p 3081 N93-28377
BAROTROPIC FLOW
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
BARRED GALAXIES
A halo and a blow-out in NGC 253 p 3199 N93-26869
Powering the superwind in NGC 253 p 3203 N93-26893
BARYONS
Galaxy tracers in N-body simulations p 3176 N93-26732
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
BASALT
Magnetic beneficiation of lunar soils p 3213 N93-27968
BATHYMETERS
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
BAYES THEOREM
On Bernoulli experiments with imprecise prior probabilities
[MEMO-COSOR-92-19] p 3123 N93-27236
Maximum imprecision related to intervals of measures and Bayesian inference with conjugate imprecise prior densities
[MEMO-COSOR-92-07] p 3124 N93-27276
On modeling of if-then rules for probabilistic inference
[AD-A262789] p 3126 N93-28404
BEACHES
Observations of turbulence in the surf zone
[AD-A262718] p 3081 N93-28397
BEAM INJECTION
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330
NIKHEF-K contributions to the 3rd European Particle Accelerator Conference
[NIKHEF-AMPS-92-02] p 3139 N93-28337
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341
High power density, thin magnetic DC septa for AmPS p 3140 N93-28342
Improvement of the 400 kV linac electron source of AmPS p 3140 N93-28343
BEAM LEADS
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341
BEAMFORMING
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system
[AD-A262712] p 3108 N93-28394

BEAMS (RADIATION)
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
BEAMS (SUPPORTS)
Mechanics in material space
[AD-A262448] p 3057 N93-27698
Advanced buckling analyses of beams with arbitrary cross sections
[ISBN-9-9002808-0] p 3059 N93-27944
BENDING
Numerical simulations of bent, disrupted radio jets p 3188 N93-26813
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694
BENDING FATIGUE
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050
BENDING MOMENTS
Composite laminated bend analysis and experiments p 2921 N93-27181
BENEFICIATION
Beneficiation of ilmenite from lunar analog p 2997 N93-26681
Magnetic beneficiation of lunar soils p 3213 N93-27968
BERNOULLI THEOREM
On Bernoulli experiments with imprecise prior probabilities
[MEMO-COSOR-92-19] p 3123 N93-27236
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083
BERYLLIUM COMPOUNDS
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114
BETA PARTICLES
Measuring pion beta decay with high-energy pion beams
[DE93-007347] p 3132 N93-27521
BETATRONS
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330
BIAS
Removing Malmquist bias from linear regressions p 3122 N93-26872
GPS L1-L2 bias determination
[AD-A262141] p 2941 N93-27544
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 3148 N93-28135
BIBLIOGRAPHIES
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945
Bibliography of the Maryland Power Plant Research Program, fourteenth edition
[PB93-174241] p 3068 N93-27404
Bibliography on atomic line shapes and shifts
[PB93-173433] p 3132 N93-27529
BIDIRECTIONAL REFLECTANCE
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions
[NASA-CR-193158] p 3064 N93-28417
BINARY ALLOYS
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371
BINARY FLUIDS
Collective dynamics in dense fluid mixtures p 3041 N93-28069
BINARY MIXTURES
Thermodynamic analysis of the binary systems Mo-V, Ni-V, Si-V, and Ti-V
[PB93-173185] p 3155 N93-26637
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
BINARY PHASE SHIFT KEYING
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
BINDERS (MATERIALS)
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423
Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431
BIOASSAY
Characterization and classification of strains of Francisella tularensis isolated in the central Asian focus of the Soviet Union and in Japan
[FOA-B-40421-4.4] p 3082 N93-28200
BIOASTRONAUTICS
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
Engineering design constraints of the lunar surface environment p 3022 N93-27975
BIOCHEMISTRY
CSTL technical activities 1992
[PB93-173482] p 3219 N93-27399
Characterization and classification of strains of Francisella tularensis isolated in the central Asian focus of the Soviet Union and in Japan
[FOA-B-40421-4.4] p 3082 N93-28200
Trend survey of the global environment adaptation type industrial technology
[DE93-781441] p 3071 N93-28434
BIOCONVERSION
Biological conversion of synthesis gas
[DE93-008552] p 3064 N93-26628
BIODEGRADATION
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647
BIODYNAMICS
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
BIOFEEDBACK
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
BIOGEOCHEMISTRY
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
BIOLOGICAL EFFECTS
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
ELF electric and magnetic fields: Pacific Northwest Laboratory studies
[DE93-008255] p 3029 N93-28420
BIOLOGICAL MODELS (MATHEMATICS)
An invitation to structured (meta)population models
[CWI-AM-R9113] p 3124 N93-27294
The saturating contact rate in marriage- and epidemic models
[CWI-AM-R9203] p 3124 N93-27297
The cumulative formulation of (physiologically) structured population models
[CWI-AM-R9205] p 3124 N93-27298
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
BIOSPHERE
Closed ecological systems: From test tubes to Earth's biosphere p 3088 N93-27976
BIOTECHNOLOGY
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351
BIRTH
The cumulative formulation of (physiologically) structured population models
[CWI-AM-R9205] p 3124 N93-27298
BISMUTH
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
BISMUTH COMPOUNDS
Bismuth based ceramic superconductors: An experimental study on crystal growth and vortex dynamics
[ETN-93-93665] p 3004 N93-27945
BL LACERTAE OBJECTS
The environment of x ray selected BL Lacs: Host galaxies and galaxy clustering p 3196 N93-26851
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857
BLACK BODY RADIATION
Primeval galaxies in the sub-mm and mm p 3172 N93-26713
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
Fractional brownian motion, wavelets, and infrared detector noise
[AD-A262956] p 3129 N93-28290
BLAZARS
IUEAGN: A database of ultraviolet spectra of active galactic nuclei p 3197 N93-26858
BLEACHING
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
BLOCK COPOLYMERS
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382
BLOOD
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293
BLUNT BODIES
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer p 2937 N93-27462
BODY-WING CONFIGURATIONS
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465
Towards industrial-strength Navier-Stokes codes p 2938 N93-27468
BOILERS
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
BOILING
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
BOLOMETERS
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779
A broadband THz receiver for low background space applications p 3020 N93-27782
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
BOLTZMANN-VLASOV EQUATION
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
BONDED JOINTS
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
The environmental and impact resistance of adhesively bonded thermoplastic fibre composites
[AD-A263202] p 2992 N93-28383
BOOLEAN ALGEBRA
A group-theoretical setting for some intersecting Sperner families
[MEMO-1060] p 3120 N93-28011
BOOSTER ROCKET ENGINES
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
BOREL SETS
Measurability of operators
[W-9203] p 3125 N93-27930
BORON
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
BORON NITRIDES
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
BOSE GEOMETRY
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
BOSONS
A boson field stochastic calculus and quantum filtering in Fock space
[SSCL-PREPRINT-723] p 3156 N93-28096

Physical parameters of the intermediate vector boson in the standard electroweak theory and the t-quark mass
[SSCL-PREPRINT-757] p 3135 N93-28142

BOULES
Silicon carbide semiconductor technology for high temperature and radiation environments
p 2978 N93-26928

BOUNDARIES
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932

BOUNDARY CONDITIONS
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
On the accurate long-time solution of the wave equation in exterior domains: Asymptotic expansions and corrected boundary conditions
[NASA-TM-106117] p 3111 N93-27068
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327
Thermionic emission current in a single barrier varactor p 3012 N93-27735
Linear stability analysis in the numerical solution of initial value problems
[TW-92-07] p 3118 N93-27916

BOUNDARY ELEMENT METHOD
Composite micromechanical modeling using the boundary element method
[NASA-TM-106127] p 3056 N93-27030

BOUNDARY LAYER CONTROL
High-lift aerodynamics: Prospects and plans
p 2933 N93-27442

BOUNDARY LAYER FLOW
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
The influence of bulges on boundary-layer instability
p 2932 N93-27435
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements
p 2934 N93-27448
Sea breeze simulation with a static profile of the eddy viscosity
[FOA-B-40415-4.5] p 3078 N93-27831
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955

BOUNDARY LAYER SEPARATION
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189

BOUNDARY LAYER STABILITY
On the instability of the flow in an oscillating tank of fluid
[NASA-CR-191424] p 3037 N93-26896
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274
On the role of secondary instabilities in laminar-turbulent transition of 2D and 3D boundary layers
p 2931 N93-27430

BOUNDARY LAYER TRANSITION
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274
On the role of secondary instabilities in laminar-turbulent transition of 2D and 3D boundary layers
p 2931 N93-27430
The influence of bulges on boundary-layer instability
p 2932 N93-27435
Simulation of boundary-layer transition: Receptivity to spike stage
[NASA-CR-191413] p 3040 N93-27588

BOUNDARY LAYERS
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
The influence of bulges on boundary-layer instability
p 2932 N93-27435
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations
p 2935 N93-27451
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer
p 2937 N93-27462
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466

BOUNDARY LUBRICATION
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Investigation of multiply alkylated cyclopentane synthetic oil and lead naphthenate additive under boundary contact interactions
[ATR-93(8361)-1] p 2995 N93-27602

BOUNDARY VALUE PROBLEMS
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
A singular perturbation theorem for evolution equations and time-scale arguments for structured population models
[CWI-AM-R9201] p 3112 N93-27295
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110

BOW WAVES
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219

BOX BEAMS
Miniaturized Cassegrainian solar array development
p 2968 N93-27808

BRAGG ANGLE
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178

BRAIN
Analysis of neural systems involved in modulation of memory storage
[AD-A262418] p 3084 N93-27654

BRAIN DAMAGE
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409

BRANCHING (MATHEMATICS)
Bifurcation of limit cycles in a particular class of quadratic systems with two centres
[REPT-92-43] p 3119 N93-27931
On the Bogdanov-Takens bifurcation for planar diffeomorphisms
[W-9202] p 3121 N93-28124
Mixed spectra and rotational symmetry
[W-9212] p 3121 N93-28139
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154

BRAYTON CYCLE
The 20 kWe NEP system studies
p 2982 N93-26971

BRAZING
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624

BREATHING APPARATUS
Comparison of portable crewmember protective breathing equipment (CPBE) designs
[DOT/FAA/AM-93/6] p 3086 N93-27121

BREMSSTRAHLUNG
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298

BRIGHTNESS
Near-Earth asteroids: Observer alert network and physical observations p 3168 N93-26699
Low surface brightness galaxies and tidally triggered star formation p 3178 N93-26745
Massive low surface brightness galaxies
p 3178 N93-26746
Oxygen abundances in low surface-brightness galaxies p 3178 N93-26747
Chemical abundances in low surface brightness galaxies: Implications for their evolution
p 3178 N93-26748
Low surface brightness galaxies p 3178 N93-26750
Gas distribution and starbursts in shell galaxies
p 3183 N93-26780
Removing Malmquist bias from linear regressions
p 3122 N93-26872
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883

BRIGHTNESS DISTRIBUTION
Using x ray images to detect substructure in a sample of 40 Abell clusters p 3194 N93-26844

BRITTLE MATERIALS
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125

BROADBAND
Satellites and the BISDN: An overview of NASA R/D
[NASA-TM-106108] p 3025 N93-26903
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas
p 3011 N93-27728
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
A stochastic approach to robust broadband structural control p 3058 N93-27892

BROADCASTING
Digital audio and video broadcasting by satellite
p 3023 N93-26645
Mugunghwa: The first Korean domestic satellite for FSS and DBS services p 3023 N93-26651
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations
[NASA-TM-106172] p 2956 N93-27064

BROKEN SYMMETRY
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235

BRONZES
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667

BROWNIAN MOVEMENTS
Fractional brownian motion, wavelets, and infrared detector noise
[AD-A262956] p 3129 N93-28290

BRUSH SEALS
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132

BSCCO SUPERCONDUCTORS
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344

BUCKLING
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
Advanced buckling analyses of beams with arbitrary cross sections
[ISBN-9-9002808-0] p 3059 N93-27944

BUFFER STORAGE
Compiler-assisted multiple instruction rollback recovery using a read buffer
[NASA-CR-193102] p 3090 N93-27239
Magnetic bearings for a high-performance optical disk buffer p 2961 N93-27569

BULGING
The multicomponent structure of bulges
p 3187 N93-26800

BUOYANCY
Combined forced and free convection in a curved duct
p 2937 N93-27461

BURGER EQUATION
Wavelet local extrema applied to image processing
[AD-A262362] p 3118 N93-27691

BURNING RATE
The effects of small changes in the input data on the determination of closed-bomb burning rates and surface area
[AD-A261969] p 3156 N93-27952
BUTANES
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685
BY-PRODUCTS
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
BYPASS RATIO
By-passing of heat exchangers in gas turbines p 2922 N93-27189

C

C (PROGRAMMING LANGUAGE)
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
C++ (PROGRAMMING LANGUAGE)
MP-DIT: Mathematical program data interchange tool
[MEMO-COSOR-92-31] p 3095 N93-27385
C-130 AIRCRAFT
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force p 2926 N93-27210
CADMIUM TELLURIDES
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626
CALCIUM CHLORIDES
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
CALCIUM ISOTOPES
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
CALCIUM OXIDES
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
CALCULUS
Specification and generation of a lambda-calculus environment
[CWI-CS-R9233] p 3101 N93-27997
A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998
CALIBRATING
Neural networks for calibration tomography
[NASA-TM-106164] p 3045 N93-26906
Calibration of a shock wave position sensor using artificial neural networks
[NASA-TM-106138] p 3045 N93-27001
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151
Solid state x ray detector calibration techniques and linac beam intensity measurements
[AD-A262097] p 3153 N93-28177
Nuclear interactions in high energy heavy ions and applications in astrophysics
[DE93-007302] p 3140 N93-28357
CALORIMETERS
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235
CAMERAS
How to get unlimited observing time on a 4 metre telescope p 3171 N93-26707
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029
CANONICAL FORMS
Quantized discrete space oscillators p 3146 N93-27349
Algebraic conformal field theory
[NIKHEF-H/91-26] p 3128 N93-27507
The method of minimal normal forms --- for solving nonlinear differential equations
[DE93-008060] p 3118 N93-27627
Integrable symplectic maps
[SSCL-PREPRINT-744] p 3122 N93-28387
CANS
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
CANTILEVER BEAMS
A preliminary structural analysis of space-based inflatable tubular frame structures p 3086 N93-27849
CAPACITANCE-VOLTAGE CHARACTERISTICS
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
CAPACITORS
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009
CAPE KENNEDY LAUNCH COMPLEX
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285
CARBOHYDRATES
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351
CARBON
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
CARBON DIOXIDE
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435
CARBON DIOXIDE REMOVAL
Technologies for ECLSS evolution p 2965 N93-27720
JSC ECLSS R/T program overview p 2966 N93-27725
Trend survey of the global environment adaptation type industrial technology
[DE93-781441] p 3071 N93-28434
CARBON FIBER REINFORCED PLASTICS
Composite laminated bend analysis and experiments p 2921 N93-27181
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266
CARBON FIBERS
A photovoltaic catenary-tent array for the Martian surface
[NASA-CR-191144] p 2976 N93-26703
Fiber shape effects on metal matrix composite behavior
[NASA-TM-106067] p 2989 N93-26704
CARBON ISOTOPES
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
CARBON MONOXIDE
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
The case of missing CO-13 in mergers p 3189 N93-26819
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
Variations of time-to-incapacitation and carboxyhemoglobin values in rats exposed to two carbon monoxide concentrations
[DOT/FAA/AM-93/7] p 3082 N93-27152
CARBON MONOXIDE POISONING
Variations of time-to-incapacitation and carboxyhemoglobin values in rats exposed to two carbon monoxide concentrations
[DOT/FAA/AM-93/7] p 3082 N93-27152
CARBON STEELS
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
CARBON TETRACHLORIDE
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309
CARBON 13
The case of missing CO-13 in mergers p 3189 N93-26819
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
CARBON-CARBON COMPOSITES
Exploration of multilayer concepts for oxidation protection of carbon-carbon composites
[AD-A262380] p 2991 N93-27653
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
CARBONACEOUS CHONDRITES
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684
CARGO AIRCRAFT
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268
CARGO SPACECRAFT
The 100-500 kWe NEP systems p 2983 N93-26984
CARIBBEAN SEA
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
CARRIER TRANSPORT (SOLID STATE)
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
CASSEGRAIN OPTICS
Miniaturized Cassegrainian solar array development p 2968 N93-27808
CAST ALLOYS
Material analysis of austempered ductile iron
[AD-A261953] p 3000 N93-27921
CATALOGS (PUBLICATIONS)
Space Station Freedom biomedical monitoring and countermeasures: Biomedical facility hardware catalog
[NASA-CR-193156] p 3081 N93-26700
NASA SBIR product catalog, 1990
[NASA-TM-105103] p 3163 N93-27028
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
NASA SBIR product catalog, 1991
[NASA-TM-108080] p 3163 N93-27591
CATALYSIS
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
CATALYSTS
Probe molecule studies: Active species in alcohol synthesis
[DE93-009685] p 2993 N93-26616
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374
Method for retarding oxidation of an organic substrate
[NASA-CASE-LEW-15306-2] p 3006 N93-28425
CATEGORIES
Congruences and quotients in categories of algebras
[RUU-CS-92-23] p 3120 N93-28064
CATHODES
DARPA advanced high current density cathodes for defense applications: Development phase
[AD-A261949] p 3032 N93-27919
CATIONS
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
CAUCHY PROBLEM
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
CAVITATION FLOW
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
CAVITIES
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872
CAVITY FLOW
Parallel solution of high-order numerical schemes for solving incompressible flows
[NASA-TM-4451] p 3106 N93-27040
Experimental investigation of turbine disk cavity aerodynamics and heat transfer
[NASA-CR-193131] p 2943 N93-27115
CAVITY RESONATORS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613

CD-ROM
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1
[PB93-173938] p 3026 N93-27403
CELESTIAL MECHANICS
Annular Solar Eclipse of 10 May 1994
[NASA-RP-1301] p 3169 N93-27057
CEMENTS
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
CENTERBODIES
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
CENTRAL NERVOUS SYSTEM
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409
CENTRAL PROCESSING UNITS
Compiler-assisted multiple instruction rollback recovery using a read buffer
[NASA-CR-193102] p 3090 N93-27239
CENTRIFUGAL COMPRESSORS
Active magnetic bearings applied to industrial compressors p 2961 N93-27570
CENTRIFUGAL FORCE
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
Combined forced and free convection in a curved duct p 2937 N93-27461
CERAMIC COATINGS
Sol-gel preparation of ion-conducting ceramics for use in thin films
[DE93-007720] p 3003 N93-27616
CERAMIC FIBERS
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457
CERAMIC MATRIX COMPOSITES
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
Fracture micromechanics of ceramic composites p 2920 N93-27172
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
CERAMIC NUCLEAR FUELS
Advanced propulsion engine assessment based on a cermet reactor p 2977 N93-26919
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
CERAMICS
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems
[PB93-173490] p 3002 N93-26638
Melt-processing of lunar ceramics p 3007 N93-26685
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
Silicon-Film(tm) on ceramic solar cells
[DE93-009608] p 3065 N93-27108
Radial basis function network learns ceramic processing and predicts related strength and density
[NASA-TM-106048] p 2990 N93-27129
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Ceramics technical activities, 1992 (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173508] p 3003 N93-27400
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578
Sol-gel preparation of ion-conducting ceramics for use in thin films
[DE93-007720] p 3003 N93-27616
Bismuth based ceramic superconductors: An experimental study on crystal growth and vortex dynamics
[ETN-93-93665] p 3004 N93-27945
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423
CERIUM OXIDES
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
CERMETS
Advanced propulsion engine assessment based on a cermet reactor p 2977 N93-26919
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
CHAINS
A group-theoretical setting for some intersecting Sperner families
[MEMO-1060] p 3120 N93-28011
CHALCOGENIDES
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
CHANNEL FLOW
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
CHANNELS (DATA TRANSMISSION)
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
Generic Application Layer for PC-controlled VME measuring systems (GAL PC-VME)
[OEFZS-4630] p 3103 N93-28204
Modal testing using a full instrumentation technique
[DE93-009635] p 3046 N93-28373
CHAOS
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics
[SSCL-PREPRINT-725] p 3126 N93-28098
CHARACTERIZATION
Acceleration Studies
[NASA-CR-192547] p 2947 N93-26948
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
CHARGE COUPLED DEVICES
How to get unlimited observing time on a 4 metre telescope p 3171 N93-26707
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
Solid state research
[AD-A262874] p 3154 N93-28247
CHARGE TRANSFER
An acoustic charge transport imager for high definition television applications
[NASA-CR-193081] p 3030 N93-26701
Phase separation and superconductivity in the U equals infinity limit of the extended multiband Hubbard model
[SSCL-PREPRINT-763] p 3151 N93-27580
Fast interfacial electron transfer: Evidence for inverted region kinetic behavior
[AD-A262434] p 3133 N93-27658
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
Transport of electron-waves and single-charges in semiconductor nanostructures
[ETN-93-93609] p 3031 N93-27880
Superconductivity, phase separation and charge transfer instability in the U = infinity limit of the three band model of the CuO2 planes
[SSCL-PREPRINT-749] p 3153 N93-28140
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
CHARGED PARTICLES
Overview of charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-007898] p 3131 N93-26626
Molecular dynamics modeling of electric double layer
[AD-A263068] p 3134 N93-27954
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178
CHARPY IMPACT TEST
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
CHASSIS
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152
CHECKOUT
Origin tracking
[CWI-CS-R9230] p 3100 N93-27994
CHEMICAL ANALYSIS
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000
Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077
CSTL technical activities 1992
[PB93-173482] p 3219 N93-27399
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362
CHEMICAL BONDS
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
CHEMICAL COMPOSITION
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942
Accelerator Mass Spectrometry facility (AMS)
[AD-A262458] p 3134 N93-27829
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
CHEMICAL ENERGY
Electrical power integration for lunar operations p 2988 N93-27966
CHEMICAL ENGINEERING
CSTL technical activities 1992
[PB93-173482] p 3219 N93-27399
CHEMICAL EQUILIBRIUM
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Regenerable biocide delivery unit, volume 2
[NASA-CR-185701-VOL-2] p 3082 N93-27360
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467
CHEMICAL EVOLUTION
Evidence for a multiphase, inhomogeneous interstellar medium in damped Ly alpha systems p 3180 N93-26760
Constraints on chemical evolution models from QSOALS abundances p 3182 N93-26769
CHEMICAL EXPLOSIONS
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296
CHEMICAL LASERS
Energy transfer studies in interhalogen molecules
[AD-A262888] p 3137 N93-28375
CHEMICAL PROPERTIES
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
CHEMICAL PROPULSION
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219
Progress in optical diagnostic development for the electro-thermal chemical program
[DE93-009452] p 2997 N93-28452
CHEMICAL REACTIONS
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614

Theoretical studies of the reactions and spectroscopy of radical species relevant to combustion reactions and diagnostics
[DE93-010247] p 2993 N93-26619
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Silazine to silica p 2997 N93-28257
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430

CHEMICAL REACTORS
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems
[PB93-173490] p 3002 N93-26638
Innovative optoelectronic materials and structures using OMVPE
[AD-A262202] p 3152 N93-27683

CHEMISORPTION
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618

CHEMOTHERAPY
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409

CHINA
Satellite communication services for Tibet autonomous region by domestic satellite in China
p 3023 N93-26650

CHIPS (ELECTRONICS)
Planar GaAs diodes for THz frequency mixing applications p 3019 N93-27776
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381

CHIPS (MEMORY DEVICES)
Rutger's CAM2000 chip architecture
[NASA-CR-193078] p 3151 N93-27094
The design of chip architectures for accurate inner product computation
[ISBN-9-09-005204-6] p 3090 N93-27372

CHIRAL DYNAMICS
Non-isospectral extension of the chiral model and its geometry
[SSCL-PREPRINT-735] p 3128 N93-28101

CHLORINE
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

CHLOROFLUOROCARBONS
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519

CHLOROFORM
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519

CHOLESKY FACTORIZATION
Computing modified Newton directions using a partial Cholesky factorization
[DE93-009584] p 3128 N93-28454

CHROMATOGRAPHY
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622

CHROMITES
Effects of composition on sintering of current interconnects in SOFC
[DE93-004837] p 3065 N93-27613
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229

CHROMIUM ALLOYS
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010

CHROMIUM COMPOUNDS
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

CHRONOLOGY
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285

CIRCLES (GEOMETRY)
Steady incompressible flow around objects in general coordinates with a multigrid solution method
[REPT-92-48] p 3041 N93-27884

CIRCUIT RELIABILITY
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381

CIRCULAR CYLINDERS
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939

CIRCULAR ORBITS
Evolution of molecular clouds p 3203 N93-26892

CIRCULAR TUBES
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939

CIRCUMFERENCES
Concerning the circumference of certain families of graphs p 3116 N93-27479

CIRRUS CLOUDS
The representativeness of various clouds as tracers of the flow p 3075 N93-26992
CSU FIRE 2 cirrus field experiment: Description of field deployment phase
[NASA-CR-193162] p 3077 N93-27292

CITIES
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515

CIVIL AVIATION
Satellite communications for aeronautical and navigation service p 3023 N93-26648
Aircraft accident report: Controlled collision with terrain GP Express Airlines, Inc., Flight 861, A Beechcraft C99, N118GP, Anniston, Alabama, 8 June 1992
[PB93-910403] p 2940 N93-27035

CLAMPS
An apparatus for gripping test specimens
[NASA-CASE-LEW-15345-2] p 3052 N93-28127

CLASSICAL MECHANICS
Classical confined particles p 3146 N93-27356
Transformation of the Kepler problem p 3156 N93-28068
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149

CLASSIFICATIONS
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
Information extraction and integration in mineral exploration p 3167 N93-28072

CLASSIFYING
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233

CLAYS
Composition of near-Earth asteroids p 3205 N93-26690
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216

CLEANING
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
Development and evaluation of a cleanable high efficiency steel filter
[DE93-008024] p 3070 N93-28419

CLIMATE
A prototype climate information system
[AD-A261799] p 3075 N93-26630
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

CLIMATE CHANGE
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
Southern global change program. Determining the relationships between air pollutants, climate change, and southern forests
[PB93-176246] p 3069 N93-27410

CLIMATOLOGY
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

CLIMBING FLIGHT
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252

CLINICAL MEDICINE
EMDABS: Design and formal specification of a datamodel for a clinical research database system
[EUT-91-E-250] p 3165 N93-27242

CLOSED ECOLOGICAL SYSTEMS
In-situ materials processing systems and bioregenerative life support systems interrelationships p 2992 N93-26695
Alternative processes for water reclamation and solid waste processing in a physical/chemical bioregenerative life support system p 2965 N93-27721
Closed ecological systems: From test tubes to Earth's biosphere p 3088 N93-27976
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
Conceptual study on manned engineering test satellites p 2949 N93-28017

CLOUD COVER
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116

CLOUDS
Formation of massive clouds and dwarf galaxies during tidal encounters p 3190 N93-26822

CLOUDS (METEOROLOGY)
Meteorological Satellite Center Technical Note, no. 25, 1992
[MSC-TN-25] p 3075 N93-26991
A comparison of GMS low-level cloud motion winds with sea surface winds observed by ships over western part of the North Pacific Ocean p 3076 N93-26995
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

CLUSTER ANALYSIS
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744

CLUSTERS
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
Electron transfer, proton transfer and photoaddition reactions in isolated clusters
[AD-A262719] p 3137 N93-28398

COAL
Theoretical studies of the reactions and spectroscopy of radical species relevant to combustion reactions and diagnostics
[DE93-010247] p 2993 N93-26619
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332

COAL GASIFICATION
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457

COAL UTILIZATION
MHD can clean up the environment
[DE93-008015] p 3070 N93-27617
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332

COASTAL CURRENTS
Mesoscale and large-scale variability in California current system and its interaction with both California current and California undercurrent flows
[AD-A262195] p 3080 N93-27867
COASTAL WATER
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
Wave information studies of US coastlines: Verification of Pacific Ocean deepwater hindcast wave information
[AD-A262714] p 3081 N93-28396
Observations of turbulence in the surf zone
[AD-A262718] p 3081 N93-28397
COASTS
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924
COATINGS
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
COAXIAL NOZZLES
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
COBALT
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
CODERS
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder
[NASA-CASE-LEW-15700-1] p 3168 N93-28130
CODING
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder
[NASA-CASE-LEW-15700-1] p 3168 N93-28130
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
COEFFICIENT OF FRICTION
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
COGNITION
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
COGNITIVE PSYCHOLOGY
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103
COHERENT LIGHT
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456
COHERENT RADIATION
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612
COHESION
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
COLD FLOW TESTS
Analytical and experimental investigation of annular propulsive nozzles
[AD-A262685] p 2945 N93-28391
COLD GAS
The detection of large amounts of cool, x ray absorbing gas in distant clusters of galaxies. What does this mean? p 3194 N93-26841
COLD PLASMAS
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
COLLISIONS
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
Atomic hydrogen in the disturbed edge-on galaxy NGC 4631 p 3189 N93-26815
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
COLLOIDS
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
COLOR
Deep, wide-field, multi-band imaging of z approximately equal to 0.4 clusters and their environs p 3195 N93-26848
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330
Estimating scene properties by analyzing color histograms with physics-based models
[AD-A262727] p 3111 N93-28399
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky
[NASA-CR-193075] p 3171 N93-28414
COLOR-COLOR DIAGRAM
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857
COLOR-MAGNITUDE DIAGRAM
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
COLUMBIA (ORBITER)
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285
COLUMBUS SPACE STATION
European space programme p 2920 N93-27174
COMBINATORIAL ANALYSIS
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998
Sparse arrangements and the number of views of polyhedral scenes
[RUU-CS-92-24] p 3120 N93-28065
COMBUSTIBLE FLOW
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
COMBUSTION
Cumulative reports and publications
[NASA-CR-191440] p 3090 N93-27063
COMBUSTION CHAMBERS
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase p 2922 N93-27186
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
Experimental study of cross flow mixing in cylindrical and rectangular ducts
[NASA-CR-187141] p 2945 N93-27680
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
COMBUSTION CHEMISTRY
Theoretical studies of the reactions and spectroscopy of radical species relevant to combustion reactions and diagnostics
[DE93-010247] p 2993 N93-26619
COMBUSTION CONTROL
Velocity and drop size measurements in a swirl-stabilized, combusting spray
[NASA-TM-106130] p 2944 N93-27130
COMBUSTION EFFICIENCY
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216
Computer-aided surface regression analysis p 2927 N93-27217
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
COMBUSTION PHYSICS
Velocity and drop size measurements in a swirl-stabilized, combusting spray
[NASA-TM-106130] p 2944 N93-27130
Progress in optical diagnostic development for the electro-thermal chemical program
[DE93-009452] p 2997 N93-28452
COMBUSTION PRODUCTS
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine
[AD-A261965] p 3008 N93-27666
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457
COMBUSTION STABILITY
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
COMETS
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537
ROSETTA: The ESA sample return mission p 2953 N93-28049
COMMAND AND CONTROL
Management of the disaster communications by satellite p 3024 N93-26656
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
COMMERCIAL AIRCRAFT
World jet airplane inventory at year-end 1992
[PB93-174324] p 2928 N93-27405
COMMERCIAL ENERGY
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421
COMMODITIES
TS software user manual for the Time Series program and utilities
[PB93-167518] p 3091 N93-26635
COMMUNICATION NETWORKS
Mobile communication via satellite towards the year 2000 p 3023 N93-26646
Satellite communication services for Tibet autonomous region by domestic satellite in China p 3023 N93-26650
Worldwide seamless cellular satellite communications: The global mobile communication by Globalstar system p 3024 N93-26653
Data communications service by VSAT network in the Philippines p 3024 N93-26655
Management of the disaster communications by satellite p 3024 N93-26656

Communication service by satellite link in Vietnam p 3024 N93-26657
A communications system for the United Nations Transitional Authority in Cambodia (UNTAC) p 3025 N93-26663
Process membership in asynchronous environments [NASA-CR-192977] p 3091 N93-26904
DCP communication link monitoring program p 3076 N93-26994
Workshop proceedings: Information Systems for Space Astrophysics in the 21st Century, volume 1 [NASA-CR-192825] p 3165 N93-27042
Considerations for control system software verification and validation specific to implementations using distributed processor architectures [DE93-007920] p 3090 N93-27051
Center for Aeronautics and Space Information Sciences [NASA-CR-193140] p 3106 N93-27289
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes [AD-A262091] p 3028 N93-28190

COMMUNICATION SATELLITES
The 1992 United Nations Workshop on Space Communication for Development: Proceedings p 3022 N93-26640
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641
Digital audio and video broadcasting by satellite p 3023 N93-26645
SOVCAN STAR: An international satellite system p 3023 N93-26647
Zohreh: The Iranian domestic satellite system p 3023 N93-26649
Mugunghwa: The first Korean domestic satellite for FSS and DBS services p 3023 N93-26651
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652
Communication service by satellite link in Vietnam p 3024 N93-26657
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659
Fault-tolerant onboard digital information switching and routing for communications satellites [NASA-TM-4471] p 2956 N93-26895
Satellites and the BISDN: An overview of NASA R/D [NASA-TM-106108] p 3025 N93-26903
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

COMMUNICATION THEORY
Asynchronous communication in process algebra (extended abstract) [CWI-CS-R9206] p 3098 N93-27551

COMMUTATION
Characteristic sets in commutative algebra: An overview [MEMO-COSOR-92-24] p 3112 N93-27281
Symmetries of coupled harmonic oscillators p 3142 N93-27318

COMPACT GALAXIES
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
Environmental influences on galaxy evolution p 3175 N93-26727
Galaxy tracers in N-body simulations p 3176 N93-26732
Oxygen abundances in low surface-brightness galaxies p 3178 N93-26747

COMPANION STARS
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811

COMPENSATORS
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171

COMPILERS
Compiler-assisted multiple instruction rollback recovery using a read buffer [NASA-CR-193102] p 3090 N93-27239

COMPLETENESS
Regular processes with relative time and silent steps [CWI-CS-R9231] p 3101 N93-27995

COMPLEX NUMBERS
On ranks of twists of elliptic curves and power-free values of binary forms [W-9213] p 3118 N93-27868

COMPLEX SYSTEMS
Active impedance matching of complex structural systems p 3060 N93-28169

COMPLEXITY
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [MEMO-COSOR-92-32] p 3106 N93-27361
A brief survey of zero-knowledge proofs [CWI-CS-R9232] p 3101 N93-27996
Optimal multi-writer multi-reader atomic register [CWI-CS-R9235] p 3091 N93-27999
Concurrent data objects in quadratic space [CS-9112] p 3101 N93-28066

COMPONENT RELIABILITY
Probabilistic structural analysis for nuclear thermal propulsion p 2979 N93-26931
Study of hydraulic actuation system for Space Shuttle main engine propellant valves [NASA-CR-193136] p 3050 N93-27112
Neural networks: Reliability and data analysis [AD-A262354] p 3109 N93-27646

COMPOSITE MATERIALS
Composite micromechanical modeling using the boundary element method [NASA-TM-106127] p 3056 N93-27030
Probabilistic sizing of laminates with uncertainties [NASA-TM-106145] p 2990 N93-27082
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993) [PB93-173466] p 3055 N93-27398
Niobium silicides for high temperature applications [AD-A262334] p 2991 N93-28113
Diamond composite films for protective coatings on metals and method of formation [NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426

COMPOSITE STRUCTURES
Dynamic characteristics of specialty composite structures with embedded damping layers [NASA-TM-106165] p 2989 N93-26705
Probabilistic sizing of laminates with uncertainties [NASA-TM-106145] p 2990 N93-27082
Shape optimization of tibial prosthesis components [NASA-CR-191123] p 3081 N93-27085
Epoxy adhesives for field repair of composite structures p 2921 N93-27183
Stability of single layer composite cylinders subjected to lateral pressure: Numerical approach p 2922 N93-27184
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments [NASA-TM-4492] p 3056 N93-27263
A composite structured/unstructured-mesh Euler method for complex airfoil shapes p 2933 N93-27439
Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268
Demonstration and fabrication of large area 1-3 PZT composite panels [AD-A262904] p 2992 N93-28305

COMPOUND A
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research [DE93-000084] p 3065 N93-28056

COMPRESSED GAS
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders [PB93-165835] p 3057 N93-27417

COMPRESSIBILITY
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments [NASA-TM-4492] p 3056 N93-27263

COMPRESSIBLE BOUNDARY LAYER
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433

COMPRESSIBLE FLOW
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
Pseudospectral simulation of compressible turbulence using logarithmic variables [NASA-TM-107707] p 3040 N93-27586
Mesh adaption for compressible flows [INRIA-RR-1683] p 3043 N93-28443

COMPRESSION LOADS
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments [NASA-TM-4492] p 3056 N93-27263
Softening of concrete loading in compression [ISBN-9-03-860062-3] p 3056 N93-27371

COMPRESSIVE STRENGTH
A new class of high strength molding resins, phase 1 [AD-A262691] p 3005 N93-28117

COMPRESSORS
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR) [AD-A262299] p 2945 N93-27679
Detection performance of digital polarity sampled phase reversal code pulse compressors [AD-A262930] p 3028 N93-28289

COMPTON EFFECT
Radiation interaction and detection principles [DE93-005302] p 3136 N93-28298
An analysis of the saturation of a high gain FEL [DE93-007276] p 3048 N93-28314

COMPUTATION
Ways to improve your correlation functions p 3172 N93-26712
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [MEMO-COSOR-92-32] p 3106 N93-27361
The design of chip architectures for accurate inner product computation [ISBN-9-09-005204-6] p 3090 N93-27372
Provably recursive programs [CWI-CS-R9212] p 3097 N93-27500
Strategic plan for scientific computing [DE93-006875] p 3090 N93-27614
Massively parallel searching for better algorithms [DE93-009501] p 3107 N93-27623
The LAZYRMS: Avoiding work in the ATMS [RUU-CS-92-20] p 3101 N93-28062
On Zeilberger's algorithm and its q-analogue: A rigorous description [CWI-AM-R9207] p 3101 N93-28086
Workform processing: A new paradigm for fault-tolerant distributed parallel computation [AD-A262087] p 3108 N93-28222
Robust and fast computation of edge characteristics in image sequences [INRIA-RR-1689] p 3105 N93-28446

COMPUTATIONAL ASTROPHYSICS
Workshop proceedings: Information Systems for Space Astrophysics in the 21st Century, volume 1 [NASA-CR-192825] p 3165 N93-27042
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
Information technologies for astrophysics circa 2001 p 3165 N93-27045
NASA'S information technology activities for the 90's p 3165 N93-27046

COMPUTATIONAL CHEMISTRY
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor [AD-A262108] p 3135 N93-28181

COMPUTATIONAL FLUID DYNAMICS
NTR plume modeling p 2978 N93-26929
Computational fluid dynamics for nuclear thermal propulsion p 2979 N93-26930
Kinetic: A system code for analyzing nuclear thermal propulsion rocket engine transients p 2981 N93-26960
Sensitivity calculations for a 2D, inviscid, supersonic forebody problem [NASA-CR-191444] p 2928 N93-27004
Remarks on turbulent constitutive relations [NASA-TM-106116] p 3038 N93-27010
Transition aerodynamics for 20-percent-scale VTOL unmanned aerial vehicle [NASA-TM-4419] p 2928 N93-27032
Institute for Computational Mechanics in Propulsion (ICOMP) [NASA-TM-106155] p 3111 N93-27061
Grid adaption using Chimera composite overlapping meshes [NASA-TM-106163] p 3111 N93-27065
Unstructured viscous grid generation by advancing-front method [NASA-CR-191449] p 2929 N93-27067
Positivity-preserving numerical schemes for multidimensional advection [NASA-TM-106055] p 3038 N93-27091
The Center of Excellence for Hypersonics Training and Research at the University of Texas at Austin [NASA-CR-193070] p 2930 N93-27126
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow [NASA-TM-106179] p 2944 N93-27128
The 29th JANNAF Combustion Subcommittee Meeting, volume 1 [CPIA-PUBL-593-VOL-1] p 2985 N93-27134
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136

Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator
p 2985 N93-27138
Transient simulation of ram accelerator flowfields
p 2986 N93-27139
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
Calculations of turbulent separated flows
[NASA-TM-106154] p 3039 N93-27161
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
Moving-finite-element solution of time-dependent partial differential equations in two space dimensions
[CWI-NM-R9206] p 3113 N93-27303
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
The Fifth Symposium on Numerical and Physical Aspects of Aerodynamic Flows
[NASA-CR-193000] p 2931 N93-27427
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
On the role of secondary instabilities in laminar-turbulent transition of 2D and 3D boundary layers
p 2931 N93-27430
Three-dimensional compressible stability-transition calculations using the spatial theory
p 2931 N93-27431
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434
The influence of bulges on boundary-layer instability
p 2932 N93-27435
Stability investigations of airfoil flow by global analysis
p 2932 N93-27436
A composite structured/unstructured-mesh Euler method for complex airfoil shapes p 2933 N93-27439
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587
Simulation of boundary-layer transition: Receptivity to spike stage
[NASA-CR-191413] p 3040 N93-27588
A new direction in hydrodynamic stability: Beyond eigenvalues
[NASA-CR-191411] p 3040 N93-27688
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443

COMPUTATIONAL GEOMETRY

Closed G(sup 1)-continuous cubic Bezier surfaces
[CWI-CS-R9226] p 3095 N93-27390
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932
Parallel manipulators. Part 5: Determination of the workspace for a constant orientation
[INRIA-RR-1645] p 3053 N93-28439

COMPUTATIONAL GRIDS

Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
Grid adaption using Chimera composite overlapping meshes
[NASA-TM-106163] p 3111 N93-27065
Unstructured viscous grid generation by advancing-front method
[NASA-CR-191449] p 2929 N93-27067
Analysis of local uniform grid refinement
[CWI-NM-R9211] p 3114 N93-27364
Error analysis and local refinement for a one-dimensional, scalar conservation law
[CWI-NM-R9210] p 3114 N93-27365
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
Prediction of vortex breakdown on a delta wing
p 2936 N93-27459
Adaptive EAGLE dynamic solution adaptation and grid quality enhancement p 2937 N93-27464
Efficient grid based techniques for solving the Weighted Region Least Cost Path problem on multicomputers
[AD-A262153] p 3107 N93-27548
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443

COMPUTER AIDED DESIGN

Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Rocketdyne/Westinghouse nuclear thermal rocket engine modeling p 2980 N93-26955
Next generation system modeling of NTR systems
p 2981 N93-26961
Radial basis function network learns ceramic processing and predicts related strength and density
[NASA-TM-106048] p 2990 N93-27129
Computer-aided surface regression analysis
p 2927 N93-27217
Survey of continuities of curves and surfaces
[CWI-CS-R9202] p 3097 N93-27495
DEFMEF predesign document
[NLR-TP-91269-U] p 3098 N93-27543
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Generation of helical gears with new surfaces, topology by application of CNC machines
[NASA-TM-106175] p 3051 N93-27687
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220

COMPUTER AIDED MANUFACTURING

Minimizing total inventory cost on a single machine in just-in-time manufacturing
[MEMO-COSOR-92-20] p 3093 N93-27247
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220

COMPUTER AIDED MAPPING

Digital mapping inference mechanism: A process of knowledge extraction and hypotheses evaluation
p 3063 N93-27504
On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540

COMPUTER AIDED TOMOGRAPHY

Neural networks for calibration tomography
[NASA-TM-106164] p 3045 N93-26906

COMPUTER ASSISTED INSTRUCTION

Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414
Case study of technology use in adult literacy programs
[PB93-163905] p 3161 N93-27415
Software for adult literacy: Scope, suitability, available sources for information, and implications for federal policy
[PB93-163913] p 3161 N93-27416

COMPUTER GRAPHICS

Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
The ASCIS data flow graph semantics and textual format
[EUT-91-E-251] p 3093 N93-27243
Closed G(sup 1)-continuous cubic Bezier surfaces
[CWI-CS-R9226] p 3095 N93-27390
Survey of continuities of curves and surfaces
[CWI-CS-R9202] p 3097 N93-27495
More examples in MANIFOLD
[CWI-CS-R9214] p 3097 N93-27502
An architecture for interactive raster graphics
[CWI-CS-R9229] p 3102 N93-28102
The second Garnet compendium: Collected papers 1990-1992
[AD-A262696] p 3102 N93-28118
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220
Faster Phong shading
[CWI-CS-R9228] p 3103 N93-28221

COMPUTER NETWORKS

Digital telecommunications are a key development factor: Integration of satellite into overall telecommunication networks as a way to harmonize social and economic implications p 3025 N93-26660
Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289
Strategic plan for scientific computing
[DE93-006875] p 3090 N93-27614
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689

COMPUTER PROGRAM INTEGRITY

Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291

COMPUTER PROGRAMMING

Cumulative reports and publications
[NASA-CR-191440] p 3090 N93-27063
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
Formal specification of MANIFOLD: A preliminary study
[CWI-CS-R9215] p 3093 N93-27254
Transition systems and dynamic semantics
[CWI-CS-R9217] p 3094 N93-27256
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
Real time process algebra with prefixed integration
[CWI-CS-R9219] p 3114 N93-27362
Left-corner and head-corner chart parsing
[MEMO-INF-92-55] p 3096 N93-27489
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492
An executable semantics for a subset of COLD
[CWI-CS-R9145] p 3097 N93-27493
Provably recursive programs
[CWI-CS-R9212] p 3097 N93-27500
A primitive recursive set theory and AFA: On the logical complexity of the largest bisimulation
[CWI-CS-R9213] p 3097 N93-27501
More examples in MANIFOLD
[CWI-CS-R9214] p 3097 N93-27502
Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539
On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540
Software quality and testing: What DOD can learn from commercial practices
[AD-A262332] p 3099 N93-27652
Space Station Freedom Software Support Environment p 2964 N93-27706
Some experiments in transforming towards parallel executability
[TR-92-08] p 3107 N93-27903
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182
An integrated environment for the development of scientific and engineering applications
[AD-A262277] p 3103 N93-28239
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
Constraints logic programming in knowledge-based planning domains
[AD-A262958] p 3104 N93-28291
The repository-based software engineering program: Redefining AdaNET as a mainstream NASA source
[NASA-CR-193114] p 3104 N93-28328
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444
A programming tool for detailed analysis of FORTRAN operation counts
[DE93-009606] p 3105 N93-28455
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460

COMPUTER PROGRAMS

Particle bed reactor modeling p 2980 N93-26954
SAFSIM overview p 2981 N93-26959
NEP power subsystem modeling
p 2982 N93-26974
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082

Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force
p 2926 N93-27210
Kane's dynamics p 2926 N93-27211
Computer-aided surface regression analysis
p 2927 N93-27217
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414
Software for adult literacy: Scope, suitability, available sources for information, and implications for federal policy
[PB93-163913] p 3161 N93-27416
High-lift aerodynamics: Prospects and plans
p 2933 N93-27442
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Technical description LAM and OI: Limited area model and optimum interpolation analysis, second edition
[KNMI-TR-134A] p 3078 N93-27636
Self-Referenced Speckle Holography (SRSH) image reconstruction performance
[AD-A262487] p 3045 N93-27661
An examination of selected software testing tools:
[AD-A261941] p 3099 N93-27665
Desktop publishing in remote sensing
[BCRS-92-15] p 3063 N93-27702
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827
Automatization of structural analysis calculation procedure: NASTRAN pre and post processors
[ETN-93-93706] p 3100 N93-27947
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050
WAVEPACK: Basic concepts of linear wave propagation
[MEMO-1068] p 3041 N93-28077
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 2
[AD-A262784] p 2974 N93-28402
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444

COMPUTER STORAGE DEVICES
A single-transistor memory cell and sense amplifier for a gallium arsenide dynamic random access memory
[AD-A261975] p 3153 N93-27953

COMPUTER SYSTEMS DESIGN
A modeling study of the TPC-C benchmark
[NASA-CR-191443] p 3092 N93-27070
Integrated Station Executive requirements and systems design approach
[NASA-CR-185708] p 2958 N93-27143
Towards a design theory for database triggers
[CWI-CS-R9201] p 3166 N93-27494
DEFMEF predesign document
[NLR-TP-91269-U] p 3098 N93-27543
An overview of MCC and its research
p 2965 N93-27717
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222

COMPUTER SYSTEMS PERFORMANCE
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
Periodic application of concurrent error detection in processor array architectures
[NASA-CR-193217] p 3106 N93-27238
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650

COMPUTER SYSTEMS PROGRAMS
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071

COMPUTER SYSTEMS SIMULATION
A modeling study of the TPC-C benchmark
[NASA-CR-191443] p 3092 N93-27070
International survey of industrial applications of formal methods. Volume 1: Purpose, approach, analysis, and conclusions
[PB93-178556] p 3010 N93-27517
International survey of industrial applications of formal methods. Volume 2: Case studies
[PB93-178564] p 3010 N93-27518

COMPUTER TECHNIQUES
Machine aided indexing from natural language text
[NASA-CR-4512] p 3164 N93-26901
Knowledge-based machine indexing from natural language text: Knowledge base design, development, and maintenance
[NASA-CR-4523] p 3164 N93-26902
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
White paper on science operations
p 3165 N93-27047
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
Lotosphere, an attempt towards a design culture
[MEMO-INF-92-56] p 3163 N93-27490
Data management standards in Computer-Aided acquisition and Logistic Support (CALS)
p 2964 N93-27714

COMPUTER VISION
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera
p 2923 N93-27194
Digital mapping inference mechanism: A process of knowledge extraction and hypotheses evaluation
p 3063 N93-27504
Estimating scene properties by analyzing color histograms with physics-based models
[AD-A262727] p 3111 N93-28399
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441

COMPUTERIZED SIMULATION
An acoustic charge transport imager for high definition television applications
[NASA-CR-193081] p 3030 N93-26701
Galaxy tracers in N-body simulations
p 3176 N93-26732
The large-scale morphology of IRAS galaxies
p 3176 N93-26733
Gas dynamic simulations of galaxy formation
p 3176 N93-26736
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
Gas distribution and starbursts in shell galaxies
p 3183 N93-26780
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
Numerical simulations of galactic wakes
p 3189 N93-26818
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Particle bed reactor modeling p 2980 N93-26954
Computational modeling of nuclear thermal rockets
p 2980 N93-26956
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
Nuclear Engine System Simulation (NESS) version 2.0
p 2981 N93-26958
SAFSIM overview p 2981 N93-26959
Next generation system modeling of NTR systems
p 2981 N93-26961
Rocket engine numerical simulator
p 2981 N93-26962
GPS system simulation methodology
p 2984 N93-26990
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
Physics of solar activity
[NASA-CR-193139] p 3217 N93-27114
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Transient simulation of ram accelerator flowfields
p 2986 N93-27139
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB
[CWI-NM-R9213] p 3031 N93-27367
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540
Results on Monte-Carlo simulations of a microstrip gas counter
[NIKHEF-H/92-10] p 3040 N93-27541
Computable processes and bisimulation equivalence
[CWI-CS-R9207] p 3098 N93-27552
XInPosse: Structural simulation for graphics hardware
[CWI-CS-R9208] p 3098 N93-27553
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator
[AD-A262352] p 3031 N93-27645
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 2
[AD-A262098] p 3027 N93-27670
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 1
[AD-A262099] p 3027 N93-27671
Generation of helical gears with new surfaces, topology by application of CNC machines
[NASA-TM-106175] p 3051 N93-27687
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Sea breeze simulation with a static profile of the eddy viscosity
[FOA-B-40415-4.5] p 3078 N93-27831
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
Implementation of input command shaping to reduce vibration in flexible space structures
p 3059 N93-27901
Options for a lunar base surface architecture
p 3214 N93-27974
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220
Monte Carlo simulations of solvent effects on confined electrolytes
[AD-A262292] p 2996 N93-28245
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system
[AD-A262712] p 3108 N93-28394
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 2
[AD-A262784] p 2974 N93-28402
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430

COMPUTERS
Strategic plan for scientific computing
[DE93-006875] p 3090 N93-27614

CONCENTRATORS
Miniaturized Cassegrainian solar array development
p 2968 N93-27808

Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules
p 3066 N93-27962

CONCENTRIC CYLINDERS
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086

CONCRETE STRUCTURES
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879

CONCRETES
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879

CONCURRENT PROCESSING
Periodic application of concurrent error detection in processor array architectures
[NASA-CR-193217] p 3106 N93-27238
Bisimulation semantics for concurrency with atomicity and action refinement
[CWI-CS-R9210] p 3116 N93-27498
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
Concurrent data objects in quadratic space
[CS-9112] p 3101 N93-28066
A theory of processes with localities
[INRIA-RR-1632] p 3108 N93-28438

CONDENSATES
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686

CONDENSATION
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259

CONDENSED MATTER PHYSICS
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346

CONDUCTING POLYMERS
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346

CONDUCTIVITY METERS
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292

CONDUCTORS
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224

CONFERENCES
The 1992 United Nations Workshop on Space Communication for Development: Proceedings
p 3022 N93-26640
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Nuclear Propulsion Technical Interchange Meeting, volume 1
[NASA-CP-10116-VOL-1] p 2976 N93-26908
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Workshop proceedings: Information Systems for Space Astrophysics in the 21st Century, volume 1
[NASA-CR-192825] p 3165 N93-27042
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290
Workshop on Harmonic Oscillators
[NASA-CP-3197] p 3141 N93-27311
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1043] p 3115 N93-27469
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Technology for Space Station Evolution. Executive summary and overview
[NASA-TM-108724] p 2972 N93-27854
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium
[NASA-CP-3194-PT-3] p 3219 N93-28254
Third Annual Women in Science and Technology Conference
[DE93-005271] p 3164 N93-28297
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332

CONFINEMENT
Classical confined particles p 3146 N93-27356
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349

CONGRESSIONAL REPORTS
Space Station: Information on National Security applications and cost. Report to the Honorable John W. Warner, US Senate
[GAO/NSIAD-93-208] p 3169 N93-27825

CONGRUENCES
Congruences and quotients in categories of algebras
[RUU-CS-92-23] p 3120 N93-28064
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083

CONJUGATE GRADIENT METHOD
Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB
[CWI-NM-R9213] p 3031 N93-27367

CONSERVATION LAWS
Error analysis and local refinement for a one-dimensional, scalar conservation law
[CWI-NM-R9210] p 3114 N93-27365
Mechanics in material space
[AD-A262448] p 3057 N93-27698

CONSTITUTIVE EQUATIONS
Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947

CONSTRUCTION
Characterization of lunar surface materials for use in construction p 3211 N93-27959
An engineer/constructor's view of lunar resource development p 3211 N93-27960
Metals production p 3214 N93-27970
Intelligent robots for planetary exploration and construction p 3054 N93-27980

CONSTRUCTION MATERIALS
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398

CONTACT LOADS
Contact stress analysis of spiral bevel gears using nonlinear finite element static analysis
[NASA-TM-106176] p 3049 N93-27037
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411

CONTACT RESISTANCE
Influence of stochastic contact resistance on coupling losses
[MEMO-1067] p 3028 N93-28076

CONTAINERS
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943
Alternating current (AC) impedance testing of coated traycans
[AD-A261256] p 3030 N93-27099

CONTAMINANTS
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686
Contamination measurements on experiment M0003
p 2998 N93-28273
Optical characterization of LDEF contaminant film
p 3149 N93-28274

CONTAMINATION
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000
Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060

CONTEXT FREE LANGUAGES
Index expression belief networks for information disclosure
[RUU-CS-92-21] p 3167 N93-27929

CONTINENTAL SHELVES
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227

CONTINUITY (MATHEMATICS)
Introduction to a behavioral approach of continuous-time systems
[MEMO-COSOR-92-05] p 3112 N93-27244
Introduction to a behavioral approach of continuous-time systems, part 2
[MEMO-COSOR-92-17] p 3112 N93-27245
Continuous symmetries of discrete equations
[SSCL-PREPRINT-738] p 3121 N93-28163

CONTINUITY EQUATION
A finite volume discretisation scheme with a-posteriori error estimates for the symmetrised continuity equation
[CWI-NM-R9203] p 3113 N93-27300
Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327
Error analysis for the one-dimensional convection-diffusion equation
[CWI-NM-R9209] p 3114 N93-27376

CONTINUOUS SPECTRA
Starburst ages in HII galaxies p 3183 N93-26777

CONTINUOUS WAVE LASERS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613

CONTINUUM MECHANICS
Mechanics in material space
[AD-A262448] p 3057 N93-27698
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430

CONTINUUM MODELING
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110

CONTINUUMS
A radio continuum survey of edge-on spiral galaxies at 90 cm p 3185 N93-26790
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859

CONTOURS
Restoration of incomplete contour images using Markov random fields
[INRIA-RR-1688] p 3126 N93-28445

CONTRACTS
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285

CONTROL EQUIPMENT
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293

CONTROL MOMENT GYROSCOPES
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576

CONTROL SIMULATION
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
CONTROL STABILITY
Robust controller design for flexible structures using normalized coprime factor plant descriptions
[NASA-TP-3325] p 2958 N93-27083
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
Correction and simplification to the order of a stabilizing regulator is sufficient a priori information for adaptive stabilization
[MEMO-1070] p 3110 N93-28155
Balancing for nonlinear systems
[MEMO-1071] p 3121 N93-28156
Cost averaging techniques for robust control of flexible structural systems p 3061 N93-28175
CONTROL SURFACES
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
CONTROL SYSTEMS DESIGN
Development of a material processing plant for lunar soil p 3021 N93-26694
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Adaptive control strategies for flexible robotic arm
[NASA-CR-193111] p 3050 N93-27159
Six degree of freedom active vibration damping for space application
[NASA-CR-193028] p 3056 N93-27165
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171
Identification for the control of MIMO industrial processes
[EUT-91-E-256] p 3010 N93-27229
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Lotosphere, an attempt towards a design culture
[MEMO-INF-92-56] p 3163 N93-27490
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis
[AD-A262151] p 2946 N93-27546
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
Design considerations for ultra-precision magnetic bearing supported slides p 2960 N93-27562
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585
Magnetic Actuators and Suspension for Space Vibration Control
[NASA-CR-193038] p 3057 N93-27594
Automation of Space Station module power management and distribution system p 2969 N93-27816
Flight telerobotic servicer p 2970 N93-27820
Power assist EVA glove development p 3086 N93-27850
Controlled Structures Technology Steering Committee Workshop
[NASA-CR-192992] p 3058 N93-27888
Control design for the SERC experimental testbeds p 3058 N93-27891
A stochastic approach to robust broadband structural control p 3058 N93-27892
The Middeck Active Control Experiment (MACE) p 3059 N93-27896
Sensor and actuator technology development p 3047 N93-27900
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928
Approximate identification and control design with application to a mechanical system
[ISBN-90-370-0065-7] p 3109 N93-27934
Flexible control techniques for a lunar base p 3111 N93-27981
Lunar base thermal management/power system analysis and design p 3089 N93-27985
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167
The application of controlled structures technology to adaptive optics p 3060 N93-28170
Inhibiting multiple mode vibration in controlled flexible systems p 3061 N93-28172
Robust control for uncertain structures p 3061 N93-28174
CONTROL THEORY
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
Six degrees of freedom vibration isolation using electromagnetic suspension p 2960 N93-27559
Strain actuated aeroelastic control p 3059 N93-27899
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051
The reflection operator in discrete event systems
[CS-9201] p 3110 N93-28067
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090
Robust control of robots using only position measurements
[MEMO-1073] p 3110 N93-28092
CONTROL VALVES
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
CONTROLLED ATMOSPHERES
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
CONTROLLERS
Robust controller design for flexible structures using normalized coprime factor plant descriptions
[NASA-TP-3325] p 2958 N93-27083
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
Flexible control techniques for a lunar base p 3111 N93-27981
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051
The reflection operator in discrete event systems
[CS-9201] p 3110 N93-28067
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136
Correction and simplification to the order of a stabilizing regulator is sufficient a priori information for adaptive stabilization
[MEMO-1070] p 3110 N93-28155
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160
Cost averaging techniques for robust control of flexible structural systems p 3061 N93-28175
CONVECTION
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Error analysis for the one-dimensional convection-diffusion equation
[CWI-NM-R9209] p 3114 N93-27376
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939
CONVECTION CLOUDS
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds
[AD-A262673] p 3078 N93-28115
CONVECTIVE FLOW
Combined forced and free convection in a curved duct p 2937 N93-27461
CONVERGENCE
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
On transfinite abstract reduction systems
[CWI-CS-R9205] p 3117 N93-27550
Convergence of compact lattice scalar field theory to its continuum limit
[SSCL-PREPRINT-771] p 3156 N93-27584
Heavy quark masses
[SSCL-PREPRINT-772] p 3133 N93-27699
A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998
Axisymmetric vortex sheet roll-up p 2938 N93-28078
CONVOLUTION INTEGRALS
Introduction to a behavioral approach of continuous-time systems
[MEMO-COSOR-92-05] p 3112 N93-27244
COOLERS
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545
COOLING
Galaxy tracers in N-body simulations p 3176 N93-26732
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333
High power density, thin magnetic DC septa for AmPS p 3140 N93-28342
COOLING FLOWS (ASTROPHYSICS)
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
X ray opacity in cluster cooling flows p 3193 N93-26837
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
Star formation in cooling flow galaxies p 3193 N93-26839
Jet induced star formation in centrally dominant galaxies? p 3193 N93-26840
Mergers, cooling flows, and evaporation p 3194 N93-26842
COOLING SYSTEMS
Lightweight passive microclimate cooling device
[AD-A262262] p 3087 N93-28112
Thermal management in gas cooled solid state laser disk amplifiers
[DE93-009241] p 3048 N93-28230
COORDINATE TRANSFORMATIONS
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
COORDINATES
Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456
COORDINATION
Management of the disaster communications by satellite p 3024 N93-26656
COPOLYMERS
A study of the UV and VUV degradation of FEP p 3007 N93-28261
NMR and optical studies of piezoelectric polymers
[DE93-010967] p 3006 N93-28361
COPPER
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
The interaction of atomic oxygen with copper: An XPS, AES, XRD, optical transmission, and stylus profilometry study p 3149 N93-28284
COPPER OXIDES
Mean field phase diagram of two band tJ model for CuO2 layers
[SSCL-PREPRINT-764] p 3151 N93-27581
Superconductivity, phase separation and charge transfer instability in the U = infinity limit of the three band model of the CuO2 planes
[SSCL-PREPRINT-749] p 3153 N93-28140
COPPER SELENIDES
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626
CORRELATION
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Pruning the Lyman alpha forest of Q1331+170 p 3182 N93-26774
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331

CORRELATION COEFFICIENTS
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics
[SSCL-PREPRINT-725] p 3126 N93-28098
Final state interactions from Euclidean Correlation Functions
[SSCL-PREPRINT-742] p 3122 N93-28196
CORROSION
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
CORROSION RESISTANCE
Alternating current (AC) impedance testing of coated traycans
[AD-A261256] p 3030 N93-27099
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647
COSMIC BACKGROUND EXPLORER SATELLITE
Primeval galaxies in the sub-mm and mm
p 3172 N93-26713
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
COSMIC DUST
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution
p 3173 N93-26715
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
A comparison of extinction curves for dust in galaxies of different Hubble types p 3187 N93-26805
A halo and a blow-out in NGC 253
p 3199 N93-26869
Infrared fine-structure line diagnostics of shrouded active galactic nuclei p 3199 N93-26870
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane
p 3204 N93-26894
The origin and evolution of dust in interstellar and circumstellar environments
[NASA-CR-193025] p 3204 N93-27287
COSMIC GASES
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
High velocity clouds in nearby disk galaxies
p 3187 N93-26804
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
Emission line gas in early-type galaxies: Kinematics and physical conditions p 3200 N93-26874
The ISM in the M82 starburst p 3202 N93-26887
COSMIC RAYS
Static galactic halo and galactic wind
p 3198 N93-26862
COSMOLOGY
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Cosmology with liquid mirror telescopes
p 3171 N93-26708
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Ways to improve your correlation functions
p 3172 N93-26712
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
The galaxy velocity field and CDM models
p 3176 N93-26737
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
The origin and evolution of dust in interstellar and circumstellar environments
[NASA-CR-193025] p 3204 N93-27287
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions
p 3204 N93-28081
The search for cold dark matter using germanium detectors p 3205 N93-28250
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462
COSPAS
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
COST ANALYSIS
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Electrical power integration for lunar operations
p 2988 N93-27966
Cost averaging techniques for robust control of flexible structural systems p 3061 N93-28175
COST EFFECTIVENESS
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
COST ESTIMATES
Space nuclear thermal propulsion: Evaluation of PIPET at the INEL's CTF p 2955 N93-26967
Space Station: Information on National Security applications and cost. Report to the Honorable John W. Warner, US Senate
[GAO/NSIAD-93-208] p 3169 N93-27825
COST REDUCTION
Cosmology with liquid mirror telescopes
p 3171 N93-26708
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Minimizing total inventory cost on a single machine in just-in-time manufacturing
[MEMO-COSOR-92-20] p 3093 N93-27247
Advisory Committee on the Redesign of the Space Station
[NASA-TM-108760] p 2963 N93-27579
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-27969
COSTS
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
Efficient grid based techniques for solving the Weighted Region Least Cost Path problem on multicomputers
[AD-A262153] p 3107 N93-27548
Value of space defenses
[DE93-003813] p 3127 N93-28295
Productivity increases in science
[DE93-009473] p 3109 N93-28453
COULOMB POTENTIAL
Structure and thermodynamics of the soft ion model electrolyte solutions
[AD-A262293] p 3136 N93-28246
COUNTER ROTATION
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148
COUNTERMEASURES
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference
[AD-A263020] p 3031 N93-27911
COUPLED MODES
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
COUPLING
Dynamic System Coupler Program (DYSCO 4.1). Volume 3: User's manual supplement
[AD-B131158L] p 3099 N93-27590
The commutant lifting theorem in the Krein space setting: A proof based on the coupling method
[W-9208] p 3128 N93-28125
COVARIANCE
Galilean covariant harmonic oscillator
p 3145 N93-27341
CRACK INITIATION
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
CRACK PROPAGATION
Low cycle fatigue behavior of polycrystalline NiAl at 300 and 1000 K
[NASA-TM-105987] p 2998 N93-26898
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Fracture micromechanics of ceramic composites
p 2920 N93-27172
Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force
p 2926 N93-27210
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
Near threshold fatigue testing
[DE93-009069] p 3061 N93-28432
CRACK TIPS
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
CRACKING (FRACTURING)
An overview of elevated temperature damage mechanisms and fatigue behavior of a unidirectional SCS-6/Ti-15-3 composite
[NASA-TM-106131] p 2989 N93-26702
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
CRACKS
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879
CRASH LANDING
Aircraft accident report: Takeoff stall in icing conditions. USAIR Flight 405 FOKKER F-28, N485US, LaGuardia Airport, Flushing, New York, 22 March 1992
[PB93-910402] p 2940 N93-27034
CREATIVITY
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103
CREEP PROPERTIES
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
CREW WORKSTATIONS
EVA/manned systems p 2966 N93-27789
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794
CRITICAL FLOW
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154
CRITICAL TEMPERATURE
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779
Superconductive fluctuations in the density of states and tunneling resistance in high T(sub c) superconductors
[SSCL-PREPRINT-756] p 3153 N93-28141
CROP GROWTH
GRAMI: A crop growth model that can use remotely sensed information
[PB93-162014] p 3062 N93-27053
CROSS CORRELATION
Do galactic potential wells depend on their environment? p 3177 N93-26739
CROSS FLOW
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow
[NASA-TM-106179] p 2944 N93-27128
Experimental study of cross flow mixing in cylindrical and rectangular ducts
[NASA-CR-187141] p 2945 N93-27680
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449

CROSSINGS
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
CROSSLINKING
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942
CRUDE OIL
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Description of the global petroleum supply and demand outlook updated for the 1993 edition of the GRI baseline projection of US energy supply and demand, December 1992
[PB93-165744] p 3008 N93-26633
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
CRYOGENIC EQUIPMENT
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686
Cryogenic ultrahigh vacuum scanning tunneling microscopy
[AD-A262264] p 2995 N93-28187
CRYOGENIC FLUID STORAGE
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
Orbital storage and supply of subcritical liquid nitrogen p 2968 N93-27801
Superfluid helium needs and resupply on Space Station p 2968 N93-27802
CRYOGENIC ROCKET PROPELLANTS
Cryogenic transfer module for geosynchronous orbit p 2920 N93-27176
CRYOGENIC TEMPERATURE
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
CRYOGENICS
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Cryogenic ultrahigh vacuum scanning tunneling microscopy
[AD-A262264] p 2995 N93-28187
CRYOSTATS
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
CRYPTOGRAPHY
A brief survey of zero-knowledge proofs
[CWI-CS-R9232] p 3101 N93-27996
CRYSTAL DEFECTS
Low cycle fatigue behavior of polycrystalline NiAl at 300 and 1000 K
[NASA-TM-105987] p 2998 N93-26898
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
CRYSTAL DISLOCATIONS
Investigation of misfit dislocation configurations in MBE-grown InGaAs layers on misaligned GaAs (001) substrates
[DE93-007578] p 3151 N93-27522
CRYSTAL GROWTH
Experiment/facility requirements document for the Space Station Furnace Facility. Section 1: Integrated configuration
[NASA-CR-192533] p 2958 N93-27147
Studies on zeolites: Molecular mechanics, framework stability, and crystal growth
[ETN-93-93613] p 3152 N93-27935
Zeolite crystal growth and the structure on an atomic scale
[ETN-93-93615] p 3153 N93-27936
Bismuth based ceramic superconductors: An experimental study on crystal growth and vortex dynamics
[ETN-93-93665] p 3004 N93-27945
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
CRYSTAL LATTICES
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
CRYSTAL STRUCTURE
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Zeolite crystal growth and the structure on an atomic scale
[ETN-93-93615] p 3153 N93-27936
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114
CRYSTALLINITY
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
CRYSTALLIZATION
Melt-processing of lunar ceramics p 3007 N93-26685
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
CRYSTALLOGRAPHY
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301
CRYSTALS
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333
CUBIC EQUATIONS
Polynomial systems with centers and limit cycles
[REPT-92-38] p 3118 N93-27869
CUBIC LATTICES
Phase transitions in the dual lattice in Potts model
[ROM1F-90-752] p 3152 N93-27700
CUMULUS CLOUDS
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192
CURING
ASRM test report: Autoclave cure process development
[NASA-CR-192535] p 2986 N93-27157
Epoxy adhesives for field repair of composite structures p 2921 N93-27183
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
CURRENT DENSITY
Superlattice barrier varactors p 3012 N93-27738
Improved field emitter current densities and stability through the application of a proprietary process
[AD-A261954] p 3153 N93-27948
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
CURVE FITTING
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
A Petrov-Galerkin mixed finite element method with exponential fitting
[CWI-NM-R9204] p 3113 N93-27301
CURVES (GEOMETRY)
Graphs on the torus and geometry of numbers
[CWI-BS-R9204] p 3117 N93-27608
On ranks of twists of elliptic curves and power-free values of binary forms
[W-9213] p 3118 N93-27868
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441
CYANIDES
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
CYCLES
Ore-type conditions for cycles through specified vertices p 3116 N93-27480
Hamilton cycles in path-tough graphs p 3116 N93-27481
Polynomial systems with centers and limit cycles
[REPT-92-38] p 3118 N93-27869
Bifurcation of limit cycles in a particular class of quadratic systems with two centres
[REPT-92-43] p 3119 N93-27931
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
A note on 2-factors in graphs
[MEMO-1064] p 3120 N93-28073
CYCLOGENESIS
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5
[AD-A262117] p 3079 N93-28183
CYCLOHEXANE
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685
CYCLONES
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392
CYCLOTRON RADIATION
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
CYCLOTRON RESONANCE
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
CYCLOTRON RESONANCE DEVICES
New results and applications for the quasioptical gyrotron
[AD-A261961] p 3046 N93-27950
CYGNUS CONSTELLATION
IRAS studies of galactic supershells p 3183 N93-26776
CYLINDERS
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
CYLINDRICAL BODIES
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350
CYLINDRICAL SHELLS
Stability of single layer composite cylinders subjected to lateral pressure: Numerical approach p 2922 N93-27184
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
CYLINDRICAL TANKS
Middeck 0-gravity dynamics experiment: Fluid slosh experiments p 3010 N93-27895
CZOCHRALSKI METHOD
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690

Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149

D

DAMAGE
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-56
[NASA-TM-107560] p 2956 N93-27538
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150
DAMAGE ASSESSMENT
An overview of elevated temperature damage mechanisms and fatigue behavior of a unidirectional SCS-6/Ti-15-3 composite
[NASA-TM-106131] p 2989 N93-26702
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force
p 2926 N93-27210
Fluorescence measurements of the thermal control experiments coatings on LDEF S0069 and A0114
p 3008 N93-28280
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301
DAMPING
Squeezed states of damped oscillator chain
p 3143 N93-27329
DARK MATTER
A search for quasar protoclusters at z greater than 4
p 3174 N93-26721
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Galaxy tracers in N-body simulations
p 3176 N93-26732
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
Gas dynamic simulations of galaxy formation
p 3176 N93-26736
The galaxy velocity field and CDM models
p 3176 N93-26737
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Low redshift Lyman alpha absorption lines and the dark matter halos of disk galaxies p 3180 N93-26762
On the evolution of Lyman alpha clouds based upon the Minihalo model p 3181 N93-26765
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
Spokes in ring galaxies p 3202 N93-26885
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
The search for cold dark matter using germanium detectors p 3205 N93-28250
DATA ACQUISITION
Near-Earth asteroids: Observer alert network and physical observations p 3168 N93-26699
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
EMDABS: Design and formal specification of a datamodel for a clinical research database system
[EUT-91-E-250] p 3165 N93-27242
CSU FIRE 2 cirrus field experiment: Description of field deployment phase
[NASA-CR-193162] p 3077 N93-27292
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
Collaborations among nuclear emulsion groups in Europe during the 1950's
[NOTA-INTERNA-973] p 3133 N93-27701
Generic Application Layer for PC-controlled VME measuring systems (GAL PC-VME)
[OEFZS-4630] p 3103 N93-28204
Modal testing using a full instrumentation technique
[DE93-009635] p 3046 N93-28373
DATA BASE MANAGEMENT SYSTEMS
The Steward Observatory asteroid relational database
p 3168 N93-26698
Integrated Station Executive requirements and systems design approach
[NASA-CR-185708] p 2958 N93-27143
Towards a design theory for database triggers
[CWI-CS-R9201] p 3166 N93-27494
Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual
[AD-B131157L] p 3099 N93-27589
Semantic models for distributed data base management. Part 1: Development of a metamodel for fragmentation
[REPT-92-33] p 3168 N93-28390
DATA BASES
A prototype climate information system
[AD-A261799] p 3075 N93-26630
TS software user manual for the Time Series program and utilities
[PB93-167518] p 3091 N93-26635
IUEAGN: A database of ultraviolet spectra of active galactic nuclei p 3197 N93-26858
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
A modeling study of the TPC-C benchmark
[NASA-CR-191443] p 3092 N93-27070
An expert system shell for inferring vegetation characteristics: Changes to the historical cover type database (Task F)
[NASA-CR-193067] p 3063 N93-27072
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
EMDABS: Design and formal specification of a datamodel for a clinical research database system
[EUT-91-E-250] p 3165 N93-27242
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1
[PB93-173938] p 3026 N93-27403
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Towards a design theory for database triggers
[CWI-CS-R9201] p 3166 N93-27494
Handbook for users
[AD-A260738] p 3166 N93-27605
Technology for Space Station evolution: The data management system p 2963 N93-27705
Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184
LDEF materials overview p 2997 N93-28255
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base
p 3168 N93-28286
Data bases for LDEF results p 3168 N93-28287
Long Duration Exposure Facility experiment M0003 deintegration observation data base
p 3169 N93-28288
Advanced transportation system studies. Alternate propulsion subsystem concepts: Propulsion database
[NASA-CR-192545] p 2987 N93-28325
DATA COLLECTION PLATFORMS
DCP communication link monitoring program
p 3076 N93-26994
DATA COMPRESSION
Data compression techniques for digital video recording
[ETN-93-93610] p 3166 N93-27881
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder
[NASA-CASE-LEW-15700-1] p 3168 N93-28130
DATA FLOW ANALYSIS
The ASCIS data flow graph semantics and textual format
[EUT-91-E-251] p 3093 N93-27243
Verification of parameterised synchronous concurrent algorithms with OBJ3: The pixel planes architecture revisited
[CWI-CS-R9225] p 3095 N93-27378
Current trends in the semantics of dataflow

Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307
DECLINATION
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
DECODERS
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007
DECOMPOSITION
Recovery and separation of precious metals from space p 3001 N93-26686
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539
Some inverse problems for Jacobi and arrow matrices
[AD-A262336] p 3118 N93-27644
Extended task space control for robotic manipulators
[NASA-CASE-NPO-18902-1-CU] p 3052 N93-28129
DEDUCTION
Index expression belief networks for information disclosure
[TR-92-12] p 3167 N93-27915
Index expression belief networks for information disclosure
[RUU-CS-92-21] p 3167 N93-27929
Equivalence of a number of deduction systems
[REPT-92-34] p 3104 N93-28316
DEEP SPACE
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106
DEEP WATER
Wave information studies of US coastlines: Verification of Pacific Ocean deepwater hindcast wave information
[AD-A262714] p 3081 N93-28396
DEFECTS
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690
Mechanics in material space
[AD-A262448] p 3057 N93-27698
DEFENSE INDUSTRY
Activities report of the Netherlands Organization for Applied Scientific Research (TNO)
[ETN-93-93339] p 3226 N93-28317
DEFENSE PROGRAM
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 8: Phillips Laboratory
[AD-A261972] p 3163 N93-27642
Space Station: Information on National Security applications and cost. Report to the Honorable John W. Warner, US Senate
[GAO/NSIAD-93-208] p 3169 N93-27825
Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828
Midcourse Space Experiment (MSX) environmental assessment
[AD-A262460] p 3127 N93-27830
Summer research program (1992). Graduate student
[AD-A261971] p 3163 N93-28223
Value of space defenses
[DE93-003813] p 3127 N93-28295
Activities report of the Netherlands Organization for Applied Scientific Research (TNO)
[ETN-93-93339] p 3226 N93-28317
DEFINITION
Equivalence of a number of deduction systems
[REPT-92-34] p 3104 N93-28316
DEFORMATION
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110
Modeling the behavior of materials
[DE93-010483] p 3060 N93-28161
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241
DEGRADATION
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
A study of the UV and VUV degradation of FEP p 3007 N93-28261
LDEF fiber-composite materials characterization p 2992 N93-28264
Study of the Staebler-Wronski degradation effect in a-Si:H based p-i-n solar cell
[NASA-CR-193076] p 3066 N93-28406
DEGREES OF FREEDOM
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
DEHYDRATION
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684
DEICING
Aircraft accident report: Takeoff stall in icing conditions. USAIR Flight 405 FOKKER F-28, N485US, LaGuardia Airport, Flushing, New York, 22 March 1992
[PB93-910402] p 2940 N93-27034
DELTA WINGS
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
DEMAND (ECONOMICS)
Description of the global petroleum supply and demand outlook updated for the 1993 edition of the GRI baseline projection of US energy supply and demand, December 1992
[PB93-165744] p 3008 N93-26633
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
DEMODULATORS
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014
DENMARK
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
DENSE PLASMAS
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
DENSITY (NUMBER/VOLUME)
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
Monte Carlo simulations of solvent effects on confined electrolytes
[AD-A262292] p 2996 N93-28245
DENSITY DISTRIBUTION
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Galaxy tracers in N-body simulations p 3176 N93-26732
On the evolution of Lyman alpha clouds based upon the Minihalo model p 3181 N93-26765
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772
A boson field stochastic calculus and quantum filtering in Fock space
[SSCL-PREPRINT-723] p 3156 N93-28096
DENSITY WAVE MODEL
Density wave triggered star formation in grand design spirals p 3190 N93-26820
DEPLOYMENT
An evolutionary construction facility for Space Station Freedom p 2971 N93-27839
DEPOSITION
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
DESIGN ANALYSIS
Rocketdyne/Westinghouse nuclear thermal rocket engine modeling p 2980 N93-26955
Radiator technology p 2983 N93-26979
NEP systems model p 2984 N93-26987
A noise level analysis of special multiple-spin VAS data during storm-fest
[NOAA-TR-NESDIS-65] p 3071 N93-27079
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
Aerodynamic analysis of hypersonic waverider aircraft
[NASA-CR-192981] p 2929 N93-27093
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
Design verification test matrix development for the STME thrust chamber assembly
[NASA-TM-108406] p 2986 N93-27251
Multidisciplinary design optimization: An emerging new engineering discipline
[NASA-TM-107761] p 2942 N93-27258
Moment method analysis of linearly tapered slot antennas
[NASA-CR-191474] p 2955 N93-27261
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445

LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545
Advisory Committee on the Redesign of the Space Station
[NASA-TM-108760] p 2963 N93-27579
NIKHEF-K contributions to the 3rd European Particle Accelerator Conference
[NIKHEF-AMPS-92-02] p 3139 N93-28337
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451

DESULFURIZING
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938

DETECTION
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289

DETECTORS
Aircraft ice detectors and related technologies for onground and inflight applications
[DOT/FAA/CT-92/27] p 2940 N93-27269

DETONABLE GAS MIXTURES
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator p 2985 N93-27138

DETONATION
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151

DETONATION WAVES
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219

DETONATORS
High-voltage pulse generator capable of 200 J at 5 kV
[AD-A262111] p 3031 N93-27673

DEUTERIUM
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349

DIAGNOSIS
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
Qualitative model-based diagnostics for rocket systems
[NASA-TM-106234] p 2956 N93-28052
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181
Use of RNA hybridization in the diagnosis of a case of ulceroglandular tularemia
[FOA-B-40422-4.4] p 3083 N93-28212

DIAMOND FILMS
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Diamond composite films for protective coatings on metals and method of formation
[NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

DIAMONDS
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

DIATOMIC MOLECULES
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

DICTIONARIES
Acronym dictionary
[NASA-CR-193218] p 3164 N93-26900

DIELECTRIC PROPERTIES
Monte Carlo simulations of solvent effects on confined electrolytes
[AD-A262292] p 2996 N93-28245

DIELECTRICS
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Molecular dynamics modeling of electric double layer
[AD-A263068] p 3134 N93-27954

DIESEL FUELS
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621

DIFFERENCE EQUATIONS
Inhomogeneous Toda lattice: Its hierarchy and Darboux-Backlund transformations
[SSCL-PREPRINT-762] p 3121 N93-28146
Continuous symmetries of discrete equations
[SSCL-PREPRINT-738] p 3121 N93-28163

DIFFERENTIAL EQUATIONS
Introduction to a behavioral approach of continuous-time systems, part 2
[MEMO-COSOR-92-17] p 3112 N93-27245
Operator algebra from fusion rules 2: Implementing apparent singularities
[NIKHEF-H/92-06] p 3155 N93-27307
Galilean covariant harmonic oscillator p 3145 N93-27341
The method of minimal normal forms --- for solving nonlinear differential equations
[DE93-008060] p 3118 N93-27627
Polynomial systems with centers and limit cycles
[REPT-92-38] p 3118 N93-27869
Linear stability analysis in the numerical solution of initial value problems
[TW-92-07] p 3118 N93-27916
Note on the performance of direct and indirect Runge-Kutta-Nystroem methods
[CWI-NM-R9214] p 3120 N93-28082
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084
Inhomogeneous Toda lattice: Its hierarchy and Darboux-Backlund transformations
[SSCL-PREPRINT-762] p 3121 N93-28146
Proper elimination of latent variables
[MEMO-1072] p 3121 N93-28164

DIFFERENTIAL GEOMETRY
Non-isospectral extension of the chiral model and its geometry
[SSCL-PREPRINT-735] p 3128 N93-28101

DIFFRACTION
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311

DIFFRACTION PATTERNS
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Wide-angle radiation pattern calculation of paraboloidal reflector antennas: A comparative study
[EUT-91-E-252] p 3026 N93-27226
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180

DIFFUSION
Diffusion-accelerated solution of the 2-D S(sub n) equations with bilinear-discontinuous differencing
[DE93-008793] p 3117 N93-27621

DIFFUSION COEFFICIENT
Error analysis for the one-dimensional convection-diffusion equation
[CWI-NM-R9209] p 3114 N93-27376

DIFFUSION LENGTH
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002

DIFFUSION THEORY
Curvilinear geometry transport discretizations in the thick diffusion limit
[DE93-007109] p 3117 N93-27615

DIFFUSION WELDING
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667

DIGITAL DATA
A usage and maintenance of meteorological satellite data p 3076 N93-26996

DIGITAL ELECTRONICS
Avionics systems architectures p 2919 N93-27169

DIGITAL NAVIGATION
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178

DIGITAL SYSTEMS
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
Satellites and the BISDN: An overview of NASA R/D
[NASA-TM-106108] p 3025 N93-26903
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
Digital parallel processor array for optimum path planning
[NASA-CASE-NPO-18727-1-CU] p 3108 N93-28427

DIGITAL TELEVISION
Digital audio and video broadcasting by satellite p 3023 N93-26645
Data compression techniques for digital video recording
[ETN-93-93610] p 3166 N93-27881

DILUTION
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160

DIMENSIONAL ANALYSIS
User's guide for the algorithm testing system/version 1.1
[PB93-175990] p 3096 N93-27408

DIMENSIONAL MEASUREMENT
Development of capacitive position transducers through a mechatronic approach
[ISBN-90-9005114-7] p 3032 N93-27941
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262

DIODES
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
Monolithic millimeter-wave diode grid frequency multiplier arrays p 3019 N93-27775
Planar doped barrier subharmonic mixers p 3019 N93-27777

DIOPHANTINE EQUATION
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083

DIPLEXERS
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741

DIPOLE ANTENNAS
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. A: Multiband dipole antenna
[AD-A262010] p 3027 N93-27668
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
Choice of antenna geometry for microwave power transmission from solar power satellites p 2988 N93-27987
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308

DIRAC EQUATION
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340
On the spring and mass of the Dirac oscillator p 3146 N93-27355
Second quantization in bit-string physics p 3146 N93-27357

DIRECT BROADCAST SATELLITES
Mugunghwa: The first Korean domestic satellite for FSS and DBS services p 3023 N93-26651
DIRECT CURRENT
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
DIRECTION FINDING
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 2
[AD-A262098] p 3027 N93-27670
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 1
[AD-A262099] p 3027 N93-27671
DIRECTIONAL CONTROL
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite p 2925 N93-27203
DISASTERS
Management of the disaster communications by satellite p 3024 N93-26656
DISCOVERY (ORBITER)
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285
DISK GALAXIES
Chemical abundances in low surface brightness galaxies: Implications for their evolution p 3178 N93-26748
Low surface brightness galaxies p 3178 N93-26750
Low redshift Lyman alpha absorption lines and the dark matter halos of disk galaxies p 3180 N93-26762
The multicomponent structure of bulges p 3187 N93-26800
High velocity clouds in nearby disk galaxies p 3187 N93-26804
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
Tidal interactions and the formation of Magellanic spiral galaxies p 3190 N93-26821
Cluster tidal fields: Effects on disk galaxies p 3191 N93-26824
Gas in merging galaxies p 3202 N93-26886
DISLOCATIONS (MATERIALS)
STM tip-induced transitions of dislocation network structures on the surface of highly oriented pyrolytic graphite
[AD-A262419] p 3004 N93-27655
DISPLACEMENT MEASUREMENT
Development of capacitive position transducers through a mechatronic approach
[ISBN-90-9005114-7] p 3032 N93-27941
DISRUPTING
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989
DISSOCIATION
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
DISTANCE
HI observations of dwarf galaxies out to a distance of 50 Mpc p 3186 N93-26794
DISTORTION
Removing Malmquist bias from linear regressions p 3122 N93-26872
DISTRIBUTED PARAMETER SYSTEMS
A theory of processes with localities
[INRIA-RR-1632] p 3108 N93-28438
DISTRIBUTED PROCESSING
Process membership in asynchronous environments
[NASA-CR-192977] p 3091 N93-26904
A design and realization exercise of a mini message transfer system
[MEMO-INF-92-51] p 3095 N93-27386
Efficient grid based techniques for solving the Weighted Region Least Cost Path problem on multicomputers
[AD-A262153] p 3107 N93-27548
Automatic management of parallel and distributed system resources p 2965 N93-27715
Linear-time snapshot protocols for unbalanced systems
[CWI-CS-R9236] p 3091 N93-28000
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222
Sparse matrix algorithms on distributed memory multiprocessors
[DE93-009368] p 3103 N93-28231
Semantic models for distributed data base management. Part 1: Development of a metamodel for fragmentation
[REPT-92-33] p 3168 N93-28390
A theory of processes with localities
[INRIA-RR-1632] p 3108 N93-28438
DISTRIBUTION FUNCTIONS
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
On Bernculli experiments with imprecise prior probabilities
[MEMO-COSOR-92-19] p 3123 N93-27236
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Distribution of photons in squeezed polymode light p 3143 N93-27325
The compensation approach applied to a 2 by 2 switch
[MEMO-COSOR-92-28] p 3115 N93-27397
Optimal server assignment in the case of service times with monotone failure rates
[TW-92-04] p 3125 N93-27906
Finite interpolation of random fields
[CWI-BS-R9210] p 3126 N93-28087
DIURNAL VARIATIONS
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
DIVIDING (MATHEMATICS)
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083
DOCUMENTS
Desktop publishing in remote sensing
[BCRS-92-15] p 3063 N93-27702
DOPED CRYSTALS
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Superlattice barrier varactors p 3012 N93-27738
Magnetic properties and critical behavior of the conductivity near the M-I transition
[DE93-011437] p 3032 N93-28217
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346
DOPPLER EFFECT
A re-analysis of the spectrum of 2206-199 p 3182 N93-26775
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143
DOPPLER RADAR
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
DOSAGE
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106
Dose in water from external irradiation by electrons: Radiation protection data
[PB93-173425] p 3131 N93-27425
DOUBLE STARS
Washington Double Star Catalog Cross Index (1950 position sort)
[NASA-RP-1302] p 3171 N93-27533
A comparative examination of LMC X-4 and Her X-1 x ray double star systems
[MPE-232] p 3205 N93-28202
DOWNBURSTS
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
DOWNLINKING
High rate science data handling p 2964 N93-27709
DRAG REDUCTION
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
DRAWINGS
Drawing planar graphs using the lmc-ordering
[RUU-CS-92-33] p 3102 N93-28108
DRILLING
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
DROP SIZE
Velocity and drop size measurements in a swirl-stabilized, combusting spray
[NASA-TM-106130] p 2944 N93-27130
DROPS (LIQUIDS)
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry
[NASA-CR-191097] p 2940 N93-27267
DRUGS
Analysis of neural systems involved in modulation of memory storage
[AD-A262418] p 3084 N93-27654
DRYING
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914
DUCTED FLOW
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow
[NASA-TM-106179] p 2944 N93-27128
Experimental study of cross flow mixing in cylindrical and rectangular ducts
[NASA-CR-187141] p 2945 N93-27680
DUCTED ROCKET ENGINES
Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187
DUCTILITY
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
DUCTS
Combined forced and free convection in a curved duct p 2937 N93-27461
DURABILITY
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
DUST
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
DUST COLLECTORS
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
DWARF GALAXIES
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744
H II regions in the dwarf galaxy UGC-A 86 p 3178 N93-26749
The evolution of the intergalactic medium and the origin of the galaxy luminosity function p 3180 N93-26759
HI observations of dwarf galaxies out to a distance of 50 Mpc p 3186 N93-26794
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
Far-infrared line images of dwarf galaxies p 3186 N93-26797
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
The critical density for star formation in HII galaxies p 3189 N93-26817
Formation of massive clouds and dwarf galaxies during tidal encounters p 3190 N93-26822
DWARF STARS
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
DYES
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454
DYNAMIC CHARACTERISTICS
Dynamic characteristics of specialty composite structures with embedded damping layers
[NASA-TM-106165] p 2989 N93-26705
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
Practical limits to the performance of magnetic bearings: Peak force, slew rate, and displacement sensitivity p 2961 N93-27571

DYNAMIC CONTROL
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207
DYNAMIC LOADS
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050
Sub-nanosecond optical diagnostics of laser-material interaction and dynamic microstructure of materials
[DE93-008702] p 3049 N93-28369
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411
DYNAMIC MODELS
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
Dynamic System Coupler Program (DYSCO 4.1). Volume 1: Theoretical manual
[AD-B131156L] p 3098 N93-27531
Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual
[AD-B131157L] p 3099 N93-27589
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
MODE: Structural Test Article (STA)
p 3059 N93-27894
Strain actuated aeroelastic control
p 3059 N93-27899
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411
DYNAMIC PROGRAMMING
Transition systems and dynamic semantics
[CWI-CS-R9217] p 3094 N93-27256
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling
[MEME-COSOR-92-08] p 3124 N93-27277
Dynamic modal predicate logic
[CWI-CS-R9237] p 3101 N93-28001
DYNAMIC RESPONSE
Dynamic System Coupler Program (DYSCO 4.1). Volume 1: Theoretical manual
[AD-B131156L] p 3098 N93-27531
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585
Dynamic System Coupler Program (DYSCO 4.1). Volume 3: User's manual supplement
[AD-B131158L] p 3099 N93-27590
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data
[AD-A262363] p 2942 N93-27692
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928
Sub-nanosecond optical diagnostics of laser-material interaction and dynamic microstructure of materials
[DE93-008702] p 3049 N93-28369
High strain Lagrangian hydrodynamics: A three dimensional SPH code for dynamic material response
[AD-A262798] p 3043 N93-28378
DYNAMIC STABILITY
Active magnetic bearings applied to industrial compressors p 2961 N93-27570
DYNAMIC STRUCTURAL ANALYSIS
Dynamic characteristics of specialty composite structures with embedded damping layers
[NASA-TM-106165] p 2989 N93-26705
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data
[AD-A262363] p 2942 N93-27692
Structural technology challenges for evolutionary growth of Space Station Freedom p 2970 N93-27837
A preliminary structural analysis of space-based inflatable tubular frame structures p 3086 N93-27849
Power assist EVA glove development
p 3086 N93-27850
The Middeck 0-gravity Dynamics Experiment (MODE)
p 3010 N93-27893
MODE: Structural Test Article (STA)
p 3059 N93-27894
Strain actuated aeroelastic control
p 3059 N93-27899
The Middeck Active Control Experiment (MACE)
p 3061 N93-28173
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
DYNAMIC TESTS
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data
[AD-A262363] p 2942 N93-27692
DYNAMICAL SYSTEMS
Kane's dynamics p 2926 N93-27211
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
On the asymptotic behavior of discrete events systems
[ISBN-90-74488-01-3] p 3125 N93-27876
The reflection operator in discrete event systems
[CS-9201] p 3110 N93-28067
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics
[SSCL-PREPRINT-725] p 3126 N93-28098
Mixed spectra and rotational symmetry
[W-9212] p 3121 N93-28139
DYNAMICS
Kane's dynamics p 2926 N93-27211
DYSPROSIUM
High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294

E

E REGION
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
EARTH CRUST
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241
Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models
[AD-A263209] p 3075 N93-28384
EARTH ENVIRONMENT
Future space activities: How can a baby having grown up too much in a cradle be dealt with?
p 2948 N93-28015
EARTH GRAVITATION
The use of satellites in gravity field determination and model adjustment
[ISBN-90-6275-802-9/CIP] p 2973 N93-27946
EARTH IONOSPHERE
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
EARTH MAGNETOSPHERE
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144
Analysis of magnetometer data/wave signals in the Earth's magnetosphere
[NASA-CR-193169] p 3072 N93-27154
EARTH MANTLE
Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models
[AD-A263209] p 3075 N93-28384
EARTH OBSERVATIONS (FROM SPACE)
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera
p 2923 N93-27194
EARTH OBSERVING SYSTEM (EOS)
EOS/AMSU-A NASA/Aerojet Interface Meeting
[NASA-TM-108234] p 3063 N93-27288
EARTH ORBITAL ENVIRONMENTS
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
Debris observation and arresting experiment satellite
p 2949 N93-28023
LDEF materials overview p 2997 N93-28255
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260
A study of the UV and VUV degradation of FEP
p 3007 N93-28261
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263
LDEF fiber-composite materials characterization
p 2992 N93-28264
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel
p 2992 N93-28265
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266
An XPS study of space-exposed polyimide film
p 3007 N93-28267
Surface characterization of selected LDEF tray clamps
p 3001 N93-28271
Contamination on LDEF: Sources, distribution, and history p 2998 N93-28272
Evaluation of seals, lubricants, and adhesives used on LDEF p 3007 N93-28275
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
LDEF thermal control coatings post-flight analysis
p 3008 N93-28278
Fluorescence measurements of the thermal control experiments coatings on LDEF S0069 and A0114
p 3008 N93-28280
Atomic oxygen effects on LDEF experiment AO171
p 3138 N93-28281
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF
p 3008 N93-28282
Second LDEF Post-Retrieval Symposium interim results of experiment A0034 p 3008 N93-28283
The interaction of atomic oxygen with copper: An XPS, AES, XRD, optical transmission, and stylus profilometry study p 3149 N93-28284
Data bases for LDEF results p 3168 N93-28287
Long Duration Exposure Facility experiment M0003 deintegration observation data base
p 3169 N93-28288
Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379
EARTH ORBITS
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200
EARTH RADIATION BUDGET
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
EARTH TIDES
Geothermal research and development program
[DE93-008400] p 3071 N93-26671
EARTH-MARS TRAJECTORIES
Detail design of Mars transfer orbit
p 2953 N93-28046
ECONOMIC ANALYSIS
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region
p 3022 N93-26641
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
Electrical power integration for lunar operations
p 2988 N93-27966
Value of space defenses
[DE93-003813] p 3127 N93-28295
ECONOMIC DEVELOPMENT
Digital telecommunications are a key development factor: Integration of satellite into overall telecommunication networks as a way to harmonize social and economic implications p 3025 N93-26660
Telecommunication service by leased transponders of the regional satellite p 3025 N93-26661
Satellite communication programmes for rural education and development p 3025 N93-26662
ECONOMIC FACTORS
The challenges and benefits of lunar exploration
p 3211 N93-27957
Energy for lunar resource exploitation
p 3212 N93-27961

Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964
ECONOMIC IMPACT
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
ECONOMICS
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
ECONOMY
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
ECOSYSTEMS
EMAP monitor: February 1993 edition
[PB93-163020] p 3067 N93-26632
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Southern global change program. Determining the relationships between air pollutants, climate change, and southern forests
[PB93-176246] p 3069 N93-27410
Atoll Research Bulletin numbers 355-364: 40th anniversary issue
[PB93-169654] p 3062 N93-27421
EDDY CURRENTS
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573
EDDY VISCOSITY
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456
Sea breeze simulation with a static profile of the eddy viscosity
[FOA-B-40415-4.5] p 3078 N93-27831
EDGE DETECTION
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179
A system for measurement and control of weld pool geometry in automatic arc welding
[ETN-93-93154] p 3050 N93-27380
Robust and fast computation of edge characteristics in image sequences
[INRIA-RR-1689] p 3105 N93-28446
EDUCATION
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652
The Center of Excellence for Hypersonics Training and Research at the University of Texas at Austin
[NASA-CR-193070] p 2930 N93-27126
Mathematics as technology: Mathematical engineering
[CWI-AM-R9202] p 3113 N93-27296
Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414
Case study of technology use in adult literacy programs
[PB93-163905] p 3161 N93-27415
Software for adult literacy: Scope, suitability, available sources for information, and implications for federal policy
[PB93-163913] p 3161 N93-27416
Digest of education statistics, 1992
[PB93-169522] p 3161 N93-27420

Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 9: Rome Laboratory
[AD-A262017] p 3163 N93-27634
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 8: Phillips Laboratory
[AD-A261972] p 3163 N93-27642
Third Annual Women in Science and Technology Conference
[DE93-005271] p 3164 N93-28297
EDUCATIONAL TELEVISION
Satellite communication programmes for rural education and development p 3025 N93-26662
EFFLUENTS
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
EIGENVALUES
Airfoil stability in turbulent flow p 2926 N93-27212
Some inverse problems for Jacobi and arrow matrices
[AD-A262336] p 3118 N93-27644
A parallel divide and conquer algorithm for the generalized real symmetric definite tridiagonal eigenproblem
[AD-A262297] p 3099 N93-27678
A new direction in hydrodynamic stability: Beyond eigenvalues
[NASA-CR-191411] p 3040 N93-27688
On the Bogdanov-Takens bifurcation for planar diffeomorphisms
[W-9202] p 3121 N93-28124
EIGENVECTORS
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Some inverse problems for Jacobi and arrow matrices
[AD-A262336] p 3118 N93-27644
EINSTEIN EQUATIONS
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions p 3204 N93-28081
EL NINO
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
ELASTIC BUCKLING
Stability of single layer composite cylinders subjected to lateral pressure: Numerical approach p 2922 N93-27184
ELASTIC CYLINDERS
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
ELASTIC DEFORMATION
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411
ELASTIC PROPERTIES
Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Power assist EVA glove development p 3086 N93-27850
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
Modeling the behavior of materials
[DE93-010483] p 3060 N93-28161
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
ELASTIC SCATTERING
Description of alpha-nucleus interaction cross sections for cosmic ray shielding studies
[NASA-TP-3285] p 3138 N93-26905
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
The search for cold dark matter using germanium detectors p 3205 N93-28250
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
ELASTIC SHELLS
A study of the higher order Lamb resonances on elastic shells: Their prediction and interpretation
[AD-A262237] p 3130 N93-27933
ELASTOHYDRODYNAMICS
Elastohydrodynamic lubrication of multilayered elastic solids p 3053 N93-28413
ELASTOPLASTICITY
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410
ELECTRIC BATTERIES
Fuel cell technology for lunar surface operations p 3067 N93-27965
Application of quality function deployment to the design of a lithium battery
[DE93-008346] p 3033 N93-28459
ELECTRIC CHARGE
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487
ELECTRIC CONDUCTORS
Sol-gel preparation of ion-conducting ceramics for use in thin films
[DE93-007720] p 3003 N93-27616
ELECTRIC CONNECTORS
Separation tool for multipin electrical connectors
[NASA-CASE-NPO-18786-1-CU] p 3052 N93-28131
ELECTRIC CONTACTS
Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts p 2962 N93-27575
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363

ELECTRIC ENERGY STORAGE
Electrical power system WP-04 p 2968 N93-27804
Space Station Freedom electric power system evolutionary energy storage p 2968 N93-27807
SPE (tm) regenerative hydrogen/oxygen fuel cells for extraterrestrial surface and microgravity applications p 2969 N93-27813
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814

ELECTRIC FIELDS
Novel properties of the q-analogue quantized radiation field p 3143 N93-27324
Molecular dynamics modeling of electric double layer [AD-A263068] p 3134 N93-27954
The 80 kV electrostatic wire septum for AmPS p 3139 N93-28340
Confinement and stability of VH-mode discharges in the D3-D tokamak [DE93-008988] p 3150 N93-28349

ELECTRIC GENERATORS
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736

ELECTRIC POTENTIAL
Studies in medium energy physics [DE93-007305] p 3131 N93-27048
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Spinning-current method for offset reduction in silicon Hall plates [ISBN-90-6275-780-4/CIP] p 3152 N93-27873
Nuclear interactions in high energy heavy ions and applications in astrophysics [DE93-007302] p 3140 N93-28357

ELECTRIC POWER
A photovoltaic catenary-tent array for the Martian surface [NASA-CR-191144] p 2976 N93-26703
Power system technology discipline p 2973 N93-27862
Renewable resources in the US electricity supply [DE93-009492] p 3066 N93-28370

ELECTRIC POWER PLANTS
Bibliography of the Maryland Power Plant Research Program, fourteenth edition [PB93-174241] p 3068 N93-27404
MHD can clean up the environment [DE93-008015] p 3070 N93-27617

ELECTRIC POWER SUPPLIES
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984
Manned lunar surface site p 2951 N93-28033
Improvement of the 400 kV linac electron source of AmPS p 3140 N93-28343

ELECTRIC PROPULSION
Innovative electric propulsion thruster modeling p 2984 N93-26989
An analytical optimization of electric propulsion orbit transfer vehicles [NASA-CR-191129] p 2985 N93-27060
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

ELECTRIC ROCKET ENGINES
NEP technology: FY 1992 milestones (NASA LeRC) p 2983 N93-26977
JPL nuclear electric propulsion task p 2983 N93-26980
An analytical optimization of electric propulsion orbit transfer vehicles [NASA-CR-191129] p 2985 N93-27060

ELECTRIC WIRE
Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts p 2962 N93-27575

ELECTRICAL ENGINEERING
JSEP annual report, 11 January 1991 - 10 January 1993 [AD-A261948] p 3031 N93-27918

ELECTRICAL IMPEDANCE
Alternating current (AC) impedance testing of coated traycans [AD-A261256] p 3030 N93-27099
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341

ELECTRICAL MEASUREMENT
Studies in medium energy physics [DE93-007305] p 3131 N93-27048
Nuclear interactions in high energy heavy ions and applications in astrophysics [DE93-007302] p 3140 N93-28357

ELECTRICAL PROPERTIES
Magnetic properties and critical behavior of the conductivity near the M-I transition [DE93-011437] p 3032 N93-28217

ELECTRICAL RESISTANCE
Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts p 2962 N93-27575

ELECTRICAL RESISTIVITY
Magnetic properties and critical behavior of the conductivity near the M-I transition [DE93-011437] p 3032 N93-28217

ELECTRICITY
New approaches to linear and nonlinear programming [DE93-010134] p 3103 N93-28214
Renewable resources in the US electricity supply [DE93-009492] p 3066 N93-28370

ELECTRO-OPTICS
Status of the Fiber Optic Control System Integration (FOCSI) program [NASA-TM-106151] p 3046 N93-28053
Full complex modulation using two one-parameter spatial light modulators [NASA-CASE-MSC-22255-1] p 3148 N93-28135
Solid state research [AD-A262273] p 3154 N93-28237
Solid state research [AD-A262874] p 3154 N93-28247
Analysis of electro-optic materials properties on guided wave devices [AD-A262787] p 3148 N93-28403

ELECTROCHEMICAL CELLS
Oxygen production on Mars and the Moon p 3021 N93-26683

ELECTROCHEMISTRY
Oxygen production on Mars and the Moon p 3021 N93-26683
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy [AD-A263031] p 3152 N93-27922
Metals production p 3214 N93-27970
SOFC chromite sintering and electrolyte/air-electrode interface reactions [DE93-008260] p 2995 N93-28229
Trend survey of the global environment adaptation type industrial technology [DE93-781441] p 3071 N93-28434

ELECTRODE MATERIALS
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
Lunar mining of oxygen using fluorine p 2997 N93-26680
Sol-gel preparation of ion-conducting ceramics for use in thin films [DE93-007720] p 3003 N93-27616
DARPA advanced high current density cathodes for defense applications: Development phase [AD-A261949] p 3032 N93-27919

ELECTRODEPOSITION
Innovative sputtering techniques for CIS and CdTe submodule fabrication [DE93-000085] p 3065 N93-27626
Providing adherent coatings on tungsten and tungsten alloys [DE93-007505] p 3004 N93-28006

ELECTRODES
Molecular dynamics modeling of electric double layer [AD-A263068] p 3134 N93-27954

ELECTROLYSIS
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
Experimental study of the electrolysis of silicate melts p 2997 N93-26679
Lunar mining of oxygen using fluorine p 2997 N93-26680
Space Station propulsion integrated propulsion test article p 2970 N93-27818
SPE (tm) electrolyzers for space propulsion p 2970 N93-27819
Propulsion technology discipline p 2973 N93-27863
Fuel cell technology for lunar surface operations p 3067 N93-27965
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-27969
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977

ELECTROLYTES
Simulations of solvent effects on confined electrolytes [AD-A262294] p 3133 N93-27677
Molecular dynamics modeling of electric double layer [AD-A263068] p 3134 N93-27954
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
Monte Carlo simulations of solvent effects on confined electrolytes [AD-A262292] p 2996 N93-28245
Structure and thermodynamics of the soft ion model electrolyte solutions [AD-A262293] p 3136 N93-28246

ELECTROLYTIC CELLS
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
SOFC chromite sintering and electrolyte/air-electrode interface reactions [DE93-008260] p 2995 N93-28229

ELECTROMAGNETIC ABSORPTION
Characterization of thermal annealed Bi implanted silica [DE93-009712] p 3005 N93-28318

ELECTROMAGNETIC FIELDS
Which Q-analogue of the squeezed oscillator? p 3142 N93-27320
An electromagnetically levitated two-axis gimbaless pointing mechanism p 2961 N93-27565
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media [AD-A262816] p 3028 N93-28224
Theory of photon and electron induced reactions [DE93-005925] p 3137 N93-28368
ELF electric and magnetic fields: Pacific Northwest Laboratory studies [DE93-008255] p 3029 N93-28420

ELECTROMAGNETIC INTERACTIONS
Deposition and modification of tantalum carbide coatings on graphite by laser interactions [DE93-008055] p 3003 N93-27052

ELECTROMAGNETIC MEASUREMENT
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728

ELECTROMAGNETIC NOISE
Fractional brownian motion, wavelets, and infrared detector noise [AD-A262956] p 3129 N93-28290

ELECTROMAGNETIC PROPULSION
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216

ELECTROMAGNETIC RADIATION
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment [PB93-161768] p 3062 N93-27054
Nuclear isomers as ultra-high-energy-density materials [DE93-009076] p 3135 N93-28158
Investigation of systematic effects in atmospheric microthermal probe data [AD-A262119] p 3074 N93-28185
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media [AD-A262816] p 3028 N93-28224

ELECTROMAGNETIC SCATTERING
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media [AD-A262816] p 3028 N93-28224

ELECTROMAGNETIC SPECTRA
Research investigation directed toward extending the useful range of the electromagnetic spectrum [AD-A262704] p 3028 N93-28393

ELECTROMAGNETIC WAVE TRANSMISSION
Investigation of systematic effects in atmospheric microthermal probe data [AD-A262119] p 3074 N93-28185

ELECTROMAGNETS
Six degrees of freedom vibration isolation using electromagnetic suspension p 2960 N93-27559
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
An electromagnetically levitated two-axis gimbaless pointing mechanism p 2961 N93-27565
High efficiency magnetic bearings p 2962 N93-27574

ELECTRON ACCELERATORS
NIKHEF-K contributions to the 3rd European Particle Accelerator Conference [NIKHEF-AMPS-92-02] p 3139 N93-28337
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
Mechanical design philosophy and construction of the Amsterdam Pulse Stretcher ring AmPS p 3139 N93-28339
Improvement of the 400 kV linac electron source of AmPS p 3140 N93-28343

ELECTRON ATTACHMENT
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
ELECTRON BEAMS
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612
Further time-resolved electron-beam characterizations with optical transition radiation
[DE93-007891] p 3131 N93-26625
Overview of charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-007898] p 3131 N93-26626
Solid state x ray detector calibration techniques and linac beam intensity measurements
[AD-A262097] p 3153 N93-28177
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
High power density, thin magnetic DC septa for AmPS p 3140 N93-28342
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 1
[AD-A262783] p 2974 N93-28401
ELECTRON CYCLOTRON HEATING
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
ELECTRON DIFFRACTION
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Beneficiation of ilmenite from lumar analog p 2997 N93-26681
ELECTRON DIFFUSION
Simulation of electron transport in quantum well devices p 3019 N93-27773
ELECTRON DISTRIBUTION
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
ELECTRON ENERGY
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
ELECTRON GAS
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
ELECTRON IRRADIATION
Dose in water from external irradiation by electrons: Radiation protection data
[PB93-173425] p 3131 N93-27425
ELECTRON MICROSCOPES
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612
Quantitative high-resolution electron microscopy and holography
[ISBN-90-6275-752-9/CIP] p 3046 N93-27875
ELECTRON MICROSCOPY
Quantitative high-resolution electron microscopy and holography
[ISBN-90-6275-752-9/CIP] p 3046 N93-27875
ELECTRON MOBILITY
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926
ELECTRON PHONON INTERACTIONS
Squeezing phenomena in interacting electron-phonon systems
[SSCL-PREPRINT-727] p 3134 N93-28100
ELECTRON PRECIPITATION
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
ELECTRON SCATTERING
Zeeman spin splitting frequency renormalization in disordered interacting electronic systems
[SSCL-PREPRINT-755] p 3157 N93-28315
ELECTRON SPIN
Zeeman spin splitting frequency renormalization in disordered interacting electronic systems
[SSCL-PREPRINT-755] p 3157 N93-28315
ELECTRON STATES
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
Squeezing phenomena in interacting electron-phonon systems
[SSCL-PREPRINT-727] p 3134 N93-28100
ELECTRON TRAJECTORIES
Improved field emitter current densities and stability through the application of a proprietary process
[AD-A261954] p 3153 N93-27948
ELECTRON TRANSFER
A study of electron transfer using a three-level system coupled to an ohmic bath p 3145 N93-27346
Fast interfacial electron transfer: Evidence for inverted region kinetic behavior
[AD-A262434] p 3133 N93-27658
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871
Transport of electron-waves and single-charges in semiconductor nanostructures
[ETN-93-93609] p 3031 N93-27880
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359
Electron transfer, proton transfer and photoaddition reactions in isolated clusters
[AD-A262719] p 3137 N93-28398
ELECTRON TUNNELING
Superconductive fluctuations in the density of states and tunneling resistance in high T(sub c) superconductors
[SSCL-PREPRINT-756] p 3153 N93-28141
ELECTRONIC CONTROL
A conventional point of view on active magnetic bearings p 2961 N93-27568
Magnetic bearings for a high-performance optical disk buffer p 2961 N93-27569
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
ELECTRONIC COUNTERMEASURES
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910
ELECTRONIC EQUIPMENT
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Neural networks: Reliability and data analysis
[AD-A262354] p 3109 N93-27646
Solid state research
[AD-A262273] p 3154 N93-28237
ELECTRONIC TRANSDUCERS
Development of capacitive position transducers through a mechatronic approach
[ISBN-90-9005114-7] p 3032 N93-27941
ELECTRONS
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
ELECTROPHORESIS
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415
ELECTROPHYSIOLOGY
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
ELECTROPLATING
Providing adherent coatings on tungsten and tungsten alloys
[DE93-007505] p 3004 N93-28006
ELECTROSTATIC PRECIPITATORS
MHD can clean up the environment
[DE93-008015] p 3070 N93-27617
ELECTROSTATICS
Influence of stochastic contact resistance on coupling losses
[MEMO-1067] p 3028 N93-28076
ELEMENTARY PARTICLE INTERACTIONS
Classical confined particles p 3146 N93-27356
Photoerosion in astrophysical environments p 3205 N93-28450
ELEMENTARY PARTICLES
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
ELIMINATION
Proper elimination of latent variables
[MEMO-1072] p 3121 N93-28164
ELLIPSES
Steady incompressible flow around objects in general coordinates with a multigrid solution method
[REPT-92-48] p 3041 N93-27884
ELLIPTIC FUNCTIONS
On ranks of twists of elliptic curves and power-free values of binary forms
[W-9213] p 3118 N93-27868
ELLIPTICAL GALAXIES
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
Environmental influences on galaxy evolution p 3175 N93-26727
Globular cluster systems as clues to galaxy evolution p 3175 N93-26728
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Do galactic potential wells depend on their environment? p 3177 N93-26739
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744
The hot interstellar medium in NGC 1399 p 3179 N93-26753
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem p 3188 N93-26810
Dissipative merging of galaxies p 3191 N93-26827
The nature of the evolution of galaxies by mergers p 3192 N93-26831
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane p 3204 N93-26894
EMBEDDING
Intelligent structures technology p 3061 N93-28176
EMBRITTLEMENT
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234
EMERGENCIES
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
EMISSION SPECTRA
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
The nature of faint emission-line galaxies p 3173 N93-26716
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Molecular clouds in the centers of galaxies: Constraints from HCN and CO-13 line emission p 3188 N93-26806
Searching for emission-line galaxies: The UCM survey p 3195 N93-26849
Infrared coronal emission lines and the possibility of their maser emission in Seyfert nuclei p 3196 N93-26853
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Long slit spectroscopy of NGC 5506 p 3198 N93-26861
The disk-halo interface in edge-on spirals p 3198 N93-26865
A halo and a blow-out in NGC 253 p 3199 N93-26869
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
Emission line gas in early-type galaxies: Kinematics and physical conditions p 3200 N93-26874
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
H1 in RSA galaxies p 3203 N93-26891

Powering the superwind in NGC 253
p 3203 N93-26893

EMITTANCE
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
Improvement of the 400 kV linac electron source of AmPS p 3140 N93-28343

EMITTERS
Improved field emitter current densities and stability through the application of a proprietary process
[AD-A261954] p 3153 N93-27948

ENCAPSULATING
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207

END EFFECTORS
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
Flight telerobotic servicer p 2970 N93-27820

ENDEAVOUR (ORBITER)
Chronology of KSC and KSC related events for 1992
[NASA-TM-107561] p 3219 N93-27285

ENDFIRE ARRAYS
Slot-line end-fire antennas for THz frequencies
p 3015 N93-27751

ENERGETIC PARTICLES
Photoerosion in astrophysical environments
p 3205 N93-28450

ENERGY ABSORPTION
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451

ENERGY BUDGETS
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611

ENERGY CONSERVATION
High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294

ENERGY CONSUMPTION
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
Comparison of major parameters in electrodynamic and electromagnetic levitation transport systems
[PB93-154755] p 3051 N93-27412

ENERGY CONVERSION
Advanced modular power supplies for Space Station Freedom p 2969 N93-27811

ENERGY CONVERSION EFFICIENCY
Diode-pumped laser altimeter
[NASA-CR-193166] p 3047 N93-27153
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules
p 3066 N93-27962
Study of the Staebler-Wronski degradation effect in a-Si:H based p-i-n solar cell
[NASA-CR-193076] p 3066 N93-28406

ENERGY DISSIPATION
A radio continuum survey of edge-on spiral galaxies at 90 cm p 3185 N93-26790
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298

ENERGY LEVELS
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential
p 3141 N93-27314
The harmonic oscillator and nuclear physics
p 3146 N93-27354
Number of saddle points of the energy surface in SK spin-glass
[SSCL-PREPRINT-726] p 3134 N93-28099

ENERGY METHODS
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263

ENERGY REQUIREMENTS
Atomic hydrogen in the disturbed edge-on galaxy NGC 4631 p 3189 N93-26815

ENERGY SPECTRA
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
Quasiclassical approach to ionization of atoms by strong laser pulses: The comparison with the simpleman's models and Newtonian dynamics
[DE93-008738] p 3137 N93-28463

ENERGY STORAGE
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573
Fuel cell energy storage for Space Station enhancement p 2969 N93-27815
Power system technology discipline
p 2973 N93-27862
Fuel cell technology for lunar surface operations
p 3067 N93-27965
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158

ENERGY TECHNOLOGY
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
Renewable resources in the US electricity supply
[DE93-009492] p 3066 N93-28370

ENERGY TRANSFER
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
Energy transfer studies in interhalogen molecules
[AD-A262888] p 3137 N93-28375

ENGINE CONTROL
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051

ENGINE DESIGN
Enabler 1 and 2 engine system design modeling and comparisons p 2978 N93-26924
Clustered engine study p 2978 N93-26925
SNTP propellant management system
p 2979 N93-26937
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase
p 2922 N93-27186

ENGINE INLETS
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679

ENGINE PARTS
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184

ENGINE STARTERS
Engine management during NTRE start up
p 2980 N93-26953

ENGINE TESTING LABORATORIES
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679

ENGINE TESTS
Facilities p 2954 N93-26963
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300

ENGINEERING
Mathematics as technology: Mathematical engineering
[CWI-AM-R9202] p 3113 N93-27296

ENGINEERING DRAWINGS
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220

ENGINEERING MANAGEMENT
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
Onboard system health assessment
p 2965 N93-27716

ENGLISH CHANNEL
HMS Speedy: Seakeeping trials, 25 February to 1 March 1982
[ARE-AMTE(H)-R84117] p 3021 N93-27853

ENTHALPY
Computational fluid dynamics for nuclear thermal propulsion p 2979 N93-26930

ENTIRE FUNCTIONS
Quantum wormholes and harmonic oscillators
p 3144 N93-27338

ENTRAINMENT
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405

ENTROPY
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer
p 2937 N93-27462

ENVIRONMENT EFFECTS
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000
Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Bibliography of the Maryland Power Plant Research Program, fourteenth edition
[PB93-174241] p 3068 N93-27404
Southern global change program. Determining the relationships between air pollutants, climate change, and southern forests
[PB93-176246] p 3069 N93-27410
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium
[NASA-CP-3194-PT-3] p 3219 N93-28254
LDEF materials overview p 2997 N93-28255
Oxygen isotopes implanted in the LDEF spacecraft
p 2997 N93-28256
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
A study of the UV and VUV degradation of FEP
p 3007 N93-28261
Evaluation of seals, lubricants, and adhesives used on LDEF p 3007 N93-28275
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Selected results for LDEF thermal control coatings
p 3008 N93-28279
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300

ENVIRONMENT MANAGEMENT
Trend survey of the global environment adaptation type industrial technology
[DE93-781441] p 3071 N93-28434

ENVIRONMENT MODELS
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
GRAMI: A crop growth model that can use remotely sensed information
[PB93-162014] p 3062 N93-27053
Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379

ENVIRONMENT PROTECTION
Emissions and fuel economy of Federal alternatively fueled fleet vehicles
[PB93-167195] p 3067 N93-26622
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
MHD can clean up the environment
[DE93-008015] p 3070 N93-27617
Future space activities: How can a baby having grown up too much in a cradle be dealt with?
p 2948 N93-28015
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300

ENVIRONMENT SIMULATION
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266

ENVIRONMENTAL CONTROL
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry
[NASA-CR-191097] p 2940 N93-27267
Environmental control and life support system
p 2965 N93-27718
Environmental control and life support system evolution p 2965 N93-27719
Technologies for ECLSS evolution
p 2965 N93-27720
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724

JSC ECLSS R/T program overview p 2966 N93-27725
Space Station fluid resupply p 2967 N93-27797
Environmental control and life support systems p 2972 N93-27858
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
Manned lunar surface site p 2951 N93-28033

ENVIRONMENTAL MONITORING
Statistical inference procedures for probability selection functions in long-term monitoring programs
[PB93-163012] p 3123 N93-26631
EMAP monitor: February 1993 edition
[PB93-163020] p 3067 N93-26632
Midcourse Space Experiment (MSX) environmental assessment
[AD-A262460] p 3127 N93-27830
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241

ENVIRONMENTAL QUALITY
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515

ENVIRONMENTAL SURVEYS
EMAP monitor: February 1993 edition
[PB93-163020] p 3067 N93-26632
Trend survey of the global environment adaptation type industrial technology
[DE93-781441] p 3071 N93-28434
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435

ENVIRONMENTAL TESTS
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266

ENZYME ACTIVITY
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism
[NASA-CR-193041] p 3083 N93-27102
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351

ENZYMES
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351

EPIDEMIOLOGY
The saturating contact rate in marriage- and epidemic models
[CWI-AM-R9203] p 3124 N93-27297

EPITAXY
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304

EPOXY COMPOUNDS
Epoxy adhesives for field repair of composite structures p 2921 N93-27183

EPOXY MATRIX COMPOSITES
Cosmology with liquid mirror telescopes p 3171 N93-26708
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651

EPOXY RESINS
Epoxy adhesives for field repair of composite structures p 2921 N93-27183
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207

EQUATIONS OF MOTION
Kane's dynamics p 2926 N93-27211
Spinning particles in Schwarzschild space-time
[NIKHEF-H/92-09] p 3156 N93-27511
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314

EQUATIONS OF STATE
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352

EQUILIBRIUM EQUATIONS
Analysing E(sub k)/E(sub r)/c queues
[MEMO-COSOR-92-27] p 3127 N93-27396
The compensation approach applied to a 2 by 2 switch
[MEMO-COSOR-92-28] p 3115 N93-27397
Quantum non-demolition measurements and generalized states at thermal equilibrium
[SSCL-PREPRINT-743] p 3158 N93-28386

EQUIPARTITION THEOREM
Static galactic halo and galactic wind p 3198 N93-26862

EQUIPMENT SPECIFICATIONS
Space Station Freedom biomedical monitoring and countermeasures: Biomedical facility hardware catalog
[NASA-CR-193156] p 3081 N93-26700

EQUIVALENCE
Condition for equivalence of q-deformed and anharmonic oscillators p 3143 N93-27323
Equivalent conditions for the solvability of the infinite-dimensional LQ-problem with unbounded input and output operators
[W-9209] p 3121 N93-28138
Equivalence of a number of deduction systems
[REPT-92-34] p 3104 N93-28316

ERBIUM
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333

ERBIUM ISOTOPES
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333

ERGODIC PROCESS
A recurrence type characterization of mu-exponential ergodicity for Markov processes
[TW-92-03] p 3125 N93-27905
A Kolmogorov-Smirnov type test for ergodic diffusion processes
[INRIA-RR-1696] p 3122 N93-28447

EROSION
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497

EROSIVE BURNING
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215

ERROR ANALYSIS
Ways to improve your correlation functions p 3172 N93-26712
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178
A finite volume discretisation scheme with a-posteriori error estimates for the symmetrised continuity equation
[CWI-NM-R9203] p 3113 N93-27300
Error analysis and local refinement for a one-dimensional, scalar conservation law
[CWI-NM-R9210] p 3114 N93-27365
Error analysis for the one-dimensional convection-diffusion equation
[CWI-NM-R9209] p 3114 N93-27376
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
A parallel divide and conquer algorithm for the generalized real symmetric definite tridiagonal eigenproblem
[AD-A262297] p 3099 N93-27678
Origin tracking
[CWI-CS-R9230] p 3100 N93-27994

ERROR DETECTION CODES
Periodic application of concurrent error detection in processor array architectures
[NASA-CR-193217] p 3106 N93-27238

ERRORS
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536

ESCAPE SYSTEMS
SOYUZ escape trajectory analysis from Space Station Freedom
[NASA-CR-4508] p 2954 N93-27609

ESTIMATES
A finite volume discretisation scheme with a-posteriori error estimates for the symmetrised continuity equation
[CWI-NM-R9203] p 3113 N93-27300

ESTIMATING
Ways to improve your correlation functions p 3172 N93-26712
Identification for the control of MIMO industrial processes
[EUT-91-E-256] p 3010 N93-27229
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
Asymptotic estimates of Stirling numbers
[CWI-AM-R9204] p 3113 N93-27310
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184

ETCHING
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy
[AD-A263031] p 3152 N93-27922
Providing adherent coatings on tungsten and tungsten alloys
[DE93-007505] p 3004 N93-28006

ETHANE
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485

ETHERS
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528

ETHYLENE
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485

EUCLIDEAN GEOMETRY
Quantum wormholes and harmonic oscillators p 3144 N93-27338
On inducing finite dimensional physical field representations for massless particles in even dimensions p 3144 N93-27339
Extended pure Yang Mills gauge theories with scalar and tensor gauge fields
[SSCL-PREPRINT-769] p 3156 N93-27583
Gray-scale granulometries compatible with spatial scalings
[CWI-BS-R9212] p 3121 N93-28088
Final state interactions from Euclidean Correlation Functions
[SSCL-PREPRINT-742] p 3122 N93-28196

EUKARYOTES
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989

EULER EQUATIONS OF MOTION
Grid adaption using Chimera composite overlapping meshes
[NASA-TM-106163] p 3111 N93-27065
Parallel computing strategies for block multigrid implicit solution of the Euler equation p 2922 N93-27190
On steady, inviscid shock waves at continuously curved, convex surfaces
[CWI-NM-R9202] p 3039 N93-27299

EUROPEAN SPACE AGENCY
European space programme p 2920 N93-27174

EUROPEAN SPACE PROGRAMS
European space programme p 2920 N93-27174

EUTECTIC COMPOSITES
DARPA advanced high current density cathodes for defense applications: Development phase
[AD-A261949] p 3032 N93-27919

EUTECTICS
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

EVAPORATION
Mergers, cooling flows, and evaporation
p 3194 N93-26842
EVAPORATORS
Advanced interface heat exchangers for the Space Station main thermal bus p 2971 N93-27844
EVAPOTRANSPIRATION
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422
EVASIVE ACTIONS
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
EVEN-EVEN NUCLEI
Low-spin identical bands in neighboring odd-A and even-even nuclei
[DE93-008569] p 3132 N93-27486
EVOLUTION (DEVELOPMENT)
Evolving information systems: Beyond temporal information systems
[TR-92-04] p 3167 N93-27886
A meta model for update in evolving information systems
[TR-92-05] p 3167 N93-27887
EXHAUST EMISSION
Emissions and fuel economy of Federal alternatively fueled fleet vehicles
[PB93-167195] p 3067 N93-26622
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow
[NASA-TM-106179] p 2944 N93-27128
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
[NASA-CR-192988] p 3068 N93-27163
EXHAUST FLOW SIMULATION
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
EXHAUST GASES
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
Shuttle PRCS plume contamination analysis for Astro-2 mission
[NASA-CR-193101] p 2986 N93-27240
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324
EXHAUST NOZZLES
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
EXOBIOLOGY
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945
EXOTHERMIC REACTIONS
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
EXPERIMENT DESIGN
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Middeck 0-gravity Dynamics Experiment (MODE)
p 3010 N93-28171
Productivity increases in science
[DE93-009473] p 3109 N93-28453
EXPERIMENTATION
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
EXPERT SYSTEMS
An expert system shell for inferring vegetation characteristics: Changes to the historical cover type database (Task F)
[NASA-CR-193067] p 3063 N93-27072
Elicitation of expert knowledge and assessment of imprecise prior densities for lifetime distributions
[MEMO-COSOR-92-12] p 3123 N93-27231
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
Advanced automation of a prototypic thermal control system for Space Station p 2972 N93-27846
Information extraction and integration in mineral exploration p 3167 N93-28072
Constraints logic programming in knowledge-based planning domains
[AD-A262958] p 3104 N93-28291
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395
EXPLORER SATELLITES
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290
EXPLOSIVES
Calibrating the BKW-EOS with a large product species data base and measured C-J properties
[DE93-007606] p 3008 N93-28151
EXPONENTIAL FUNCTIONS
A Petrov-Galerkin mixed finite element method with exponential fitting
[CWI-NM-R9204] p 3113 N93-27301
A recurrence type characterization of mu-exponential ergodicity for Markov processes
[TW-92-03] p 3125 N93-27905
Two counterexamples related to the Kreiss matrix theorem
[TW-92-08] p 3118 N93-27917
EXPOSURE
Variations of time-to-incapacitation and carboxyhemoglobin values in rats exposed to two carbon monoxide concentrations
[DOT/FAA/AM-93/7] p 3082 N93-27152
EXTERNAL TANKS
Investigation of separation in a strap-on Space Shuttle system
[AD-A262372] p 2956 N93-27693
EXTINCTION
A comparison of extinction curves for dust in galaxies of different Hubble types p 3187 N93-26805
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
EXTRACTION
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622
Separation tool for multipin electrical connectors
[NASA-CASE-NPO-18786-1-CU] p 3052 N93-28131
EXTRATERRESTRIAL MATTER
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
The search for cold dark matter using germanium detectors p 3205 N93-28250
EXTRATERRESTRIAL RESOURCES
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-192883] p 3206 N93-26674
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-26675
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
Oxygen production on Mars and the Moon
p 3021 N93-26683
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-27969
Options for a lunar base surface architecture
p 3214 N93-27974
Unmanned lunar surface exploration
p 2951 N93-28035
Research on lunar resources development and their utilization p 2952 N93-28039
Science missions for lunar resources exploration
p 2953 N93-28044
EXTRAVEHICULAR ACTIVITY
Technology for Space Station Evolution. Volume 3: EVA/Manned Systems/Fluid Management System
[NASA-TM-108726] p 2966 N93-27786
Extravehicular activity system p 2966 N93-27787
EVA/manned systems p 2966 N93-27789
Evolving EVA system capability for the evolving Space Station Freedom requirements p 2966 N93-27791
EVA and telerobot interaction p 2967 N93-27792
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841
Extravehicular activity technology discipline
p 2972 N93-27859
Engineering design constraints of the lunar surface environment p 3022 N93-27975
EXTRAVEHICULAR MOBILITY UNITS
Evolution of Space Station EMU PLSS technology recommendations p 2966 N93-27790
Evolving EVA system capability for the evolving Space Station Freedom requirements p 2966 N93-27791
Simplified Aid For Crew Rescue (SAFR)
p 2967 N93-27793
Extravehicular activity technology discipline
p 2972 N93-27859
EXTREMELY LOW FREQUENCIES
ELF electric and magnetic fields: Pacific Northwest Laboratory studies
[DE93-008255] p 3029 N93-28420
EXTRUDING
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313

F

F-117A AIRCRAFT
The development of aircraft in the Lockheed Skunk Works from 1954 to 1991 p 2919 N93-27168
F-18 AIRCRAFT
Status of the Fiber Optic Control System Integration (FOCSI) program
[NASA-TM-106151] p 3046 N93-28053
FABRICATION
The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
Sub micron area Nb/AlO(x)/Nb tunnel junctions for submillimeter mixer applications p 3016 N93-27761
Fabrication and characterization of high current-density, submicron, NbN/MgO/NbN tunnel junctions
p 3017 N93-27763
Planar GaAs diodes for THz frequency mixing applications p 3019 N93-27776
Welding/brazing for Space Station repair
p 2971 N93-27840
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules
p 3066 N93-27962
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009
Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457
FABRICS
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
Power assist EVA glove development
p 3086 N93-27850
FABRY-PEROT INTERFEROMETERS
Two searches for primeval galaxies
p 3172 N93-26714
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
FACE CENTERED CUBIC LATTICES
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
FACTORIZATION
Factorizations of a(sub n) +/- 1, 13 less than or equal to a less than 100
[CWI-NM-R9212] p 3114 N93-27366
Computing modified Newton directions using a partial Cholesky factorization
[DE93-009584] p 3128 N93-28454

FACULAE
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029
FADDEEV EQUATIONS
A modified Faddeev-Popov formula and the Gribov ambiguity
[SSCL-PREPRINT-750] p 3157 N93-28209
FADING
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
FAILURE
Compiler-assisted multiple instruction rollback recovery using a read buffer
[NASA-CR-193102] p 3090 N93-27239
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
Stress corrosion evaluation of HP 9Ni-4Co-0.20C steel
[NASA-TP-3384] p 3000 N93-28071
FAILURE ANALYSIS
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Fault detection of helicopter gearboxes using the multi-valued influence matrix method
[NASA-TM-106100] p 3049 N93-27069
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300
FAILURE MODES
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
Advanced buckling analyses of beams with arbitrary cross sections
[ISBN-9-9002808-0] p 3059 N93-27944
FAINT OBJECTS
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744
HST/FOS spectra of PG 1351+64: An intrinsic absorber at low redshift p 3180 N93-26761
FAIRINGS
Aerodynamic analysis of hypersonic waverider aircraft
[NASA-CR-192981] p 2929 N93-27093
FALSE ALARMS
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
FAR INFRARED RADIATION
Far-infrared line images of dwarf galaxies p 3186 N93-26797
Infrared fine-structure line diagnostics of shrouded active galactic nuclei p 3199 N93-26870
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
FAR ULTRAVIOLET RADIATION
Surface characterization of selected LDEF tray clamps p 3001 N93-28271
FARM CROPS
GRAMI: A crop growth model that can use remotely sensed information
[PB93-162014] p 3062 N93-27053
FARMLANDS
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611
FAST FOURIER TRANSFORMATIONS
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910
FATIGUE (MATERIALS)
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
Near threshold fatigue testing
[DE93-009069] p 3061 N93-28432
FATIGUE LIFE
An overview of elevated temperature damage mechanisms and fatigue behavior of a unidirectional SCS-6/Ti-15-3 composite
[NASA-TM-106131] p 2989 N93-26702
Low cycle fatigue behavior of polycrystalline NiAl at 300 and 1000 K
[NASA-TM-105987] p 2998 N93-26898
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
FATIGUE TESTS
Low cycle fatigue behavior of polycrystalline NiAl at 300 and 1000 K
[NASA-TM-105987] p 2998 N93-26898
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132
Near threshold fatigue testing
[DE93-009069] p 3061 N93-28432
FAULT TOLERANCE
Fault-tolerant onboard digital information switching and routing for communications satellites
[NASA-TM-4471] p 2956 N93-26895
Periodic application of concurrent error detection in processor array architectures
[NASA-CR-193217] p 3106 N93-27238
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689
Validated fault tolerant architectures for Space Station p 2964 N93-27707
A fault-tolerant RISC microprocessor for spacecraft applications p 2964 N93-27708
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222
FAULT TREES
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs
[RTP/2180/01] p 3099 N93-27852
FAULTS
Qualitative model-based diagnostics for rocket systems
[NASA-TM-106234] p 2956 N93-28052
FEASIBILITY ANALYSIS
NTRE extended life feasibility assessment p 2977 N93-26921
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging p 3086 N93-27848
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-27969
FEDERAL BUDGETS
Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828
FEEDBACK CONTROL
Robust controller design for flexible structures using normalized coprime factor plant descriptions
[NASA-TP-3325] p 2958 N93-27083
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171
Minimum effort interception of multiple targets p 2925 N93-27205
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis
[AD-A262151] p 2946 N93-27546
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585
Approximate identification and control design with application to a mechanical system
[ISBN-90-370-0065-7] p 3109 N93-27934
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
Robust control of robots using only position measurements
[MEMO-1073] p 3110 N93-28092
Extended task space control for robotic manipulators
[NASA-CASE-NPO-18902-1-CU] p 3052 N93-28129
FEMALES
Third Annual Women in Science and Technology Conference
[DE93-005271] p 3164 N93-28297
FERMIONS
Fermion realization of exceptional Lie algebras from maximal unitary subalgebras p 3123 N93-27348
On the fermionic Heisenberg group and its Q-representations
[NIKHEF-H/92-11] p 3117 N93-27542
A lattice computation of the decay constant of the B-meson
[SSCL-PREPRINT-747] p 3135 N93-28198
FERRITES
Development of novel ferrite antennas
[AD-A261690] p 3022 N93-26629
FERROMAGNETIC MATERIALS
Magnetic thin films and nanostructures: Anisotropy, microstructure, and their inter-relationship
[DE93-007714] p 3002 N93-26611
FERROMAGNETISM
Phase transitions in the dual lattice in Potts model
[ROM1F-90-752] p 3152 N93-27700
FERROUS METALS
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
FEYNMAN DIAGRAMS
Leading non-logarithmic contribution to the electropenguin diagram and phenomenology of kaon decays
[SSCL-PREPRINT-745] p 3137 N93-28388
FIBER COMPOSITES
A photovoltaic catenary-tent array for the Martian surface
[NASA-CR-191144] p 2976 N93-26703
Fiber shape effects on metal matrix composite behavior
[NASA-TM-106067] p 2989 N93-26704
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
Fracture micromechanics of ceramic composites p 2920 N93-27172
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
LDEF fiber-composite materials characterization p 2992 N93-28264

Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305
The environmental and impact resistance of adhesively bonded thermoplastic fibre composites
[AD-A263202] p 2992 N93-28383
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457

FIBER OPTICS
Survey of fiber-optic sensor for remote sensing in radiologically and chemically harsh environments
[DE93-004998] p 3062 N93-26624
Analog signal isolation techniques
[DE93-008059] p 3147 N93-27524
Fiber-optic shock position sensor
[DE93-009607] p 3045 N93-27625
Status of the Fiber Optic Control System Integration (FOCSI) program
[NASA-TM-106151] p 3046 N93-28053

FIELD EFFECT TRANSISTORS
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926

FIELD EMISSION
Thermionic emission current in a single barrier varactor p 3012 N93-27735
Improved field emitter current densities and stability through the application of a proprietary process
[AD-A261954] p 3153 N93-27948

FIELD OF VIEW
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays p 2920 N93-27177

FIELD THEORY (PHYSICS)
On the octonionic Nahm equations and self-dual membranes in 9 dimensions
[DE93-007974] p 3128 N93-26673
Operator algebra from fusion rules 2: Implementing apparent singularities
[NIKHEF-H/92-06] p 3155 N93-27307
On inducing finite dimensional physical field representations for massless particles in even dimensions p 3144 N93-27339
Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340
The Mathai-Quillen formalism and topological field theory
[NIKHEF-H/92-07] p 3155 N93-27496
Algebraic conformal field theory
[NIKHEF-H/91-26] p 3128 N93-27507
Convergence of compact lattice scalar field theory to its continuum limit
[SSCL-PREPRINT-771] p 3156 N93-27584
Large deviations theory and stochastic gauge fixing
[SSCL-PREPRINT-739] p 3126 N93-28193
The Gribov problem in the frame of stochastic quantization
[SSCL-PREPRINT-740] p 3157 N93-28194
Commutative diagrams and tensor calculus in Riemann spaces
[SSCL-PREPRINT-741] p 3122 N93-28195
Hadron structure on the lattice
[SSCL-PREPRINT-754] p 3157 N93-28211

FIGHTER AIRCRAFT
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
Specification of adaptive aiding systems
[AD-A263071] p 3087 N93-27927

FIGURE OF MERIT
Sensor and actuator technology development p 3047 N93-27900

FILE MAINTENANCE (COMPUTERS)
Compiler-assisted multiple instruction rollback recovery using a read buffer
[NASA-CR-193102] p 3090 N93-27239

FILM BOILING
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350

FILM THICKNESS
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437

FINE STRUCTURE
Gas distribution and starbursts in shell galaxies p 3183 N93-26780
Infrared fine-structure line diagnostics of shrouded active galactic nuclei p 3199 N93-26870
The ISM in the M82 starburst p 3202 N93-26887
Remarks about massive and massless particles in supersymmetry p 3138 N93-27335
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309

FINGERS
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging p 3086 N93-27848
Power assist EVA glove development p 3086 N93-27850

FINITE DIFFERENCE THEORY
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
The influence of bulges on boundary-layer instability p 2932 N93-27435
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736

FINITE ELEMENT METHOD
SAFSIM overview p 2981 N93-26959
Contact stress analysis of spiral bevel gears using nonlinear finite element static analysis
[NASA-TM-106176] p 3049 N93-27037
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Stability of single layer composite cylinders subjected to lateral pressure: Numerical approach p 2922 N93-27184
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
A Petrov-Galerkin mixed finite element method with exponential fitting
[CWI-NM-R9204] p 3113 N93-27301
Moving-finite-element solution of time-dependent partial differential equations in two space dimensions
[CWI-NM-R9206] p 3113 N93-27303
Error analysis for the one-dimensional convection-diffusion equation
[CWI-NM-R9209] p 3114 N93-27376
Testing a wheeled landing gear system for the TH-57 helicopter
[AD-A262152] p 2942 N93-27547
Evaluation of actuators for the SDOF and MDOF active microgravity isolation systems p 3057 N93-27595
Curvilinear geometry transport discretizations in the thick diffusion limit
[DE93-007109] p 3117 N93-27615
Diffusion-accelerated solution of the 2-D S(sub n) equations with bilinear-discontinuous differencing
[DE93-008793] p 3117 N93-27621
Finite element model and identification procedure p 3058 N93-27890
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939
Automatization of structural analysis calculation procedure: NASTRAN pre and post processors
[ETN-93-93706] p 3100 N93-27947
Rectenna thermal model development p 3022 N93-27986
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440

FINITE VOLUME METHOD
Positivity-preserving numerical schemes for multidimensional advection
[NASA-TM-106055] p 3038 N93-27091
A finite volume discretisation scheme with a-posteriori error estimates for the symmetrised continuity equation
[CWI-NM-R9203] p 3113 N93-27300
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440

FINS
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667

FIR FILTERS
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910

FIRE CONTROL
Increased fire and toxic contaminant detection responsibility by use of distributed, aspirating sensors p 2965 N93-27722

FIRES
Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model
[DOT/FAA/CT-89/25] p 2941 N93-28055

FISSION PRODUCTS
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058

FITTING
The identification of analytical device models
[ISBN-90-6275-764-2/CIP] p 3100 N93-27874

FLAME PROPAGATION
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219

FLAME TEMPERATURE
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012

FLAPPING
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445

FLAT CONDUCTORS
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341

FLAT PLATES
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463

FLAVOR (PARTICLE PHYSICS)
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097

FLEXIBLE BODIES
Robust controller design for flexible structures using normalized coprime factor plant descriptions
[NASA-TP-3325] p 2958 N93-27083

FLEXIBLE SPACECRAFT
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Implementation of input command shaping to reduce vibration in flexible space structures p 3059 N93-27901
Inhibiting multiple mode vibration in controlled flexible systems p 3061 N93-28172
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248

FLEXING
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270

FLIGHT CHARACTERISTICS
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051

FLIGHT CONTROL
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
New adaptive controllers for aircraft p 2921 N93-27180
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308

FLIGHT HAZARDS
A statistical characterization of Denver-area microbursts
[AD-A262127] p 3078 N93-27675

FLIGHT INSTRUMENTS
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
FLIGHT MANAGEMENT SYSTEMS
Avionics systems architectures p 2919 N93-27169
FLIGHT OPTIMIZATION
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
FLIGHT PATHS
MASTRE trajectory code update to automate flight trajectory design, performance predictions, and vehicle sizing for support of shuttle and shuttle derived vehicles: Programmers manual
[NASA-CR-192558] p 2954 N93-28321
FLIGHT SIMULATORS
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
FLIGHT TESTS
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
Status of the Fiber Optic Control System Integration (FOCSI) program
[NASA-TM-106151] p 3046 N93-28053
FLIR DETECTORS
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays p 2920 N93-27177
FLOATING POINT ARITHMETIC
The design of chip architectures for accurate inner product computation
[ISBN-9-09-005204-6] p 3090 N93-27372
FLOQUET THEOREM
On the instability of the flow in an oscillating tank of fluid
[NASA-CR-191424] p 3037 N93-26896
FLOW CHARACTERISTICS
Combined forced and free convection in a curved duct p 2937 N93-27461
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070
FLOW COEFFICIENTS
Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649
FLOW DISTRIBUTION
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator p 2985 N93-27138
Transient simulation of ram accelerator flowfields p 2986 N93-27139
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
[NASA-CR-192988] p 3068 N93-27163
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
A composite structured/unstructured-mesh Euler method for complex airfoil shapes p 2933 N93-27439
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
Steady incompressible flow around objects in general coordinates with a multigrid solution method
[REPT-92-48] p 3041 N93-27884
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449
FLOW EQUATIONS
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
FLOW MEASUREMENT
Fuzzy logic particle tracking velocimetry
[NASA-TM-106194] p 3045 N93-27027
Analysis of fluctuating static pressure measurements in a large high Reynolds number transonic cryogenic wind tunnel
[NASA-TM-108722] p 2947 N93-27142
FLOW STABILITY
On the instability of the flow in an oscillating tank of fluid
[NASA-CR-191424] p 3037 N93-26896
Flow instability in particle-bed nuclear reactors p 2979 N93-26934
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
Positivity-preserving numerical schemes for multidimensional advection
[NASA-TM-106055] p 3038 N93-27091
Airfoil stability in turbulent flow p 2926 N93-27212
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble p 2936 N93-27457
A new direction in hydrodynamic stability: Beyond eigenvalues
[NASA-CR-191411] p 3040 N93-27688
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
FLOW THEORY
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
FLOW VELOCITY
Fuzzy logic particle tracking velocimetry
[NASA-TM-106194] p 3045 N93-27027
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252
FLOW VISUALIZATION
Neural networks for calibration tomography
[NASA-TM-106164] p 3045 N93-26906
Calibration of a shock wave position sensor using artificial neural networks
[NASA-TM-106138] p 3045 N93-27001
A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449
FLUID DYNAMICS
SAFSIM overview p 2981 N93-26959
Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-28171
The Middeck Active Control Experiment (MACE) p 3061 N93-28173
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
FLUID FLOW
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
FLUID JETS
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
Experimental study of cross flow mixing in cylindrical and rectangular ducts
[NASA-CR-187141] p 2945 N93-27680
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405
FLUID MANAGEMENT
Technology for Space Station Evolution. Volume 3: EVA/Manned Systems/Fluid Management System
[NASA-TM-108726] p 2966 N93-27786
Fluid Management System (FMS) fluid systems overview p 2967 N93-27796
Space Station fluid resupply p 2967 N93-27797
Space Station fluid management logistics p 2967 N93-27799
Orbital storage and supply of subcritical liquid nitrogen p 2968 N93-27801
Superfluid helium needs and resupply on Space Station p 2968 N93-27802
Fluid management system technology discipline p 2973 N93-27861
FLUID MECHANICS
Leonardian fluid mechanics in the manuscript F
[PB93-178853] p 3040 N93-27411
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430
FLUID-SOLID INTERACTIONS
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
FLUORESCENCE
Fluorescence measurements of the thermal control experiments coatings on LDEF S0069 and A0114 p 3008 N93-28280
High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294
FLUORINE
Lunar mining of oxygen using fluorine p 2997 N93-26680
FLUORINE COMPOUNDS
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
FLUORINE ORGANIC COMPOUNDS
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528
FLUTTER
Airfoil stability in turbulent flow p 2926 N93-27212
FLUX DENSITY
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137
FLUX PINNING
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
FLUX VECTOR SPLITTING
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440
FLY ASH
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
FLY BY WIRE CONTROL
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241

FLYING PERSONNEL
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
FLYWHEELS
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814
FOCAL PLANE DEVICES
Fractional brownian motion, wavelets, and infrared detector noise
[AD-A262956] p 3129 N93-28290
FOOD PROCESSING
Alternating current (AC) impedance testing of coated traycans
[AD-A261256] p 3030 N93-27099
FOOD PRODUCTION (IN SPACE)
In-situ materials processing systems and bioregenerative life support systems interrelationships p 2992 N93-26695
FOOTPRINTS
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200
FORCE DISTRIBUTION
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
FORCED CONVECTION
Combined forced and free convection in a curved duct p 2937 N93-27461
FOREBODIES
Sensitivity calculations for a 2D, inviscid, supersonic forebody problem
[NASA-CR-191444] p 2928 N93-27004
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
FORECASTING
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641
Including maximum sustained wind speed in a time series model to forecast hurricane movement
[AD-A262510] p 3078 N93-27663
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827
Renewable resources in the US electricity supply
[DE93-009492] p 3066 N93-28370
FORESTS
EMAP monitor: February 1993 edition
[PB93-163020] p 3067 N93-26632
Southern global change program. Determining the relationships between air pollutants, climate change, and southern forests
[PB93-176246] p 3069 N93-27410
Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649
FORM FACTORS
B(sub c) decays
[SSCL-PREPRINT-774] p 3132 N93-27638
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
FORMALDEHYDE
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
FORMALISM
A meta model for update in evolving information systems
[TR-92-05] p 3167 N93-27887
Description of an adder board
[TR-92-09] p 3027 N93-27904
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions p 3204 N93-28081
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165
FORMING TECHNIQUES
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
FORTRAN
A programming tool for detailed analysis of FORTRAN operation counts
[DE93-009606] p 3105 N93-28455
FOSSIL FUELS
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435
FOURIER ANALYSIS
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586
FOURIER TRANSFORMATION
Ultra-wideband radar transient detection using time-frequency and wavelet transforms
[AD-A262154] p 3026 N93-27549
Influence of stochastic contact resistance on coupling losses
[MEMO-1067] p 3028 N93-28076
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191
An astrophysics data program investigation of spatial structure of supernova remnants
[NASA-CR-193104] p 3205 N93-28409
FRACTURE MECHANICS
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006
Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
Mechanics in material space
[AD-A262448] p 3057 N93-27698
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
The environmental and impact resistance of adhesively bonded thermoplastic fibre composites
[AD-A263202] p 2992 N93-28383
Near threshold fatigue testing
[DE93-009069] p 3061 N93-28432
FRACTURE STRENGTH
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
FRACTURING
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
Fatigue in single crystal nickel superalloys
[AD-A262126] p 2999 N93-27674
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
FRAGMENTATION
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
FREE CONVECTION
Combined forced and free convection in a curved duct p 2937 N93-27461
FREE ELECTRON LASERS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613
Further time-resolved electron-beam characterizations with optical transition radiation
[DE93-007891] p 3131 N93-26625
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
Ultraviolet Free-Electron Laser (UV FEL) Facility at Brookhaven National Laboratory
[DE93-007274] p 3048 N93-28355
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456
FREE FLOW
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble p 2936 N93-27457
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
FREE MOLECULAR FLOW
Hypersonic panel flutter in a rarefied atmosphere
[NASA-CR-4514] p 2929 N93-27084
FREQUENCIES
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
FREQUENCY CONTROL
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132
FREQUENCY CONVERTERS
Negative Differential Resistance (NDR) frequency conversion with gain p 3017 N93-27766
FREQUENCY DISTRIBUTION
Zeeman spin splitting frequency renormalization in disordered interacting electronic systems
[SSCL-PREPRINT-755] p 3157 N93-28315
FREQUENCY MULTIPLIERS
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
Monolithic millimeter-wave diode grid frequency multiplier arrays p 3019 N93-27775
FREQUENCY RESPONSE
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910
FREQUENCY SHIFT KEYING
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014
FRESH WATER
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
FRESNEL LENSES
Zone plate lens antennas for millimeter and submillimeter wavelengths p 3016 N93-27757
FRICTION
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
FRICTIONLESS ENVIRONMENTS
Magnetic bearings for a high-performance optical disk buffer p 2961 N93-27569
FROST
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252

FUEL CELLS
Strategic planning for molten carbonate fuel cell development and commercialization
[DE93-009156] p 3064 N93-27107
Effects of composition on sintering of current interconnects in SOFC
[DE93-004837] p 3065 N93-27613
Fuel cell technology for lunar surface operations
p 3067 N93-27965
Metals production p 3214 N93-27970
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
FUEL COMBUSTION
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012
Aerospace applications of metal combustion
p 2920 N93-27175
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase
p 2922 N93-27186
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435
FUEL CONSUMPTION
Emissions and fuel economy of Federal alternatively fueled fleet vehicles
[PB93-167195] p 3067 N93-26622
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
Regression rate mechanism in a solid fuel ramjet
p 2922 N93-27185
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
FUEL CORROSION
Laser diagnostics for NTP fuel corrosion studies
p 2979 N93-26936
FUEL FLOW
Particle bed reactor modeling p 2980 N93-26954
FUEL FLOW REGULATORS
Space Station propulsion integrated propulsion test article p 2970 N93-27818
FUEL PRODUCTION
Biological conversion of synthesis gas
[DE93-008552] p 3064 N93-26628
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-27969
FUEL SYSTEMS
The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
FUEL TANKS
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
FUEL VALVES
Study of hydraulic actuation system for Space Shuttle main engine propellant valves
[NASA-CR-193136] p 3050 N93-27112
FULLERENES
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
FUNCTIONAL ANALYSIS
A representation result for nonlinear filter maps on a white noise framework
[MEMO-1062] p 3129 N93-28013
FUNCTIONAL DESIGN SPECIFICATIONS
Extravehicular activity system p 2966 N93-27787
Structures for Space Station Freedom: Overview of current concept p 2970 N93-27836
FUNCTIONS (MATHEMATICS)
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Ways to improve your correlation functions
p 3172 N93-26712
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
Mixed H2/H infinity control in a stochastic framework
[MEMO-COSOR-92-13] p 3109 N93-27232
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
Exact classification with two-layered perceptrons
[MEMO-COSOR-92-25] p 3112 N93-27273
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
Extensions of choice behaviour
[MEMO-COSOR-92-23] p 3163 N93-27280
One-third-integrality in the metric polytope
[CWI-BS-R9209] p 3112 N93-27293
Finding k disjoint paths in a directed planar graph
[CWI-BS-R9206] p 3095 N93-27379
Analysing E(sub k)/E(sub r)/c queues
[MEMO-COSOR-92-27] p 3127 N93-27396
Integrable symplectic maps
[SSCL-PREPRINT-744] p 3122 N93-28387
Standard families of algorithms
[REPT-92-20] p 3104 N93-28389
FURNACES
A multi-zone muffle furnace design
[NASA-TM-106153] p 3009 N93-27011
Experiment/facility requirements document for the Space Station Furnace Facility. Section 1: Integrated configuration
[NASA-CR-192533] p 2958 N93-27147
Space Station Furnace Facility. Volume 2: Summary of technical reports
[NASA-CR-192534] p 2973 N93-28323
FUSION REACTORS
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421
FUZZY SETS
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
FUZZY SYSTEMS
Fuzzy logic particle tracking velocimetry
[NASA-TM-106194] p 3045 N93-27027
Mobile robot navigation using qualitative reasoning
[DE93-008277] p 3109 N93-27104

G

GALACTIC CLUSTERS
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
Environmental influences on galaxy evolution
p 3175 N93-26727
Globular cluster systems as clues to galaxy evolution
p 3175 N93-26728
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Galaxy tracers in N-body simulations
p 3176 N93-26732
Subclustering in the hierarchical model of galaxy formation p 3176 N93-26734
Gas dynamic simulations of galaxy formation
p 3176 N93-26736
Do galactic potential wells depend on their environment? p 3177 N93-26739
Near-IR imaging of moderate redshift galaxy clusters
p 3177 N93-26741
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
Low surface brightness galaxies and tidally triggered star formation p 3178 N93-26745
A faint field-galaxy redshift survey in quasar fields
p 3179 N93-26751
Searching for Lyman alpha emission from a possible Zel'dovich pancake p 3179 N93-26755
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
CO deficiency in galaxies of the Fornax cluster?
p 3185 N93-26791
HI observations of dwarf galaxies out to a distance of 50 Mpc p 3186 N93-26794
Molecular gas content of galaxies in the Hydra-Centaurus supercluster p 3188 N93-26807
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
Cluster tidal fields: Effects on disk galaxies
p 3191 N93-26824
A numerical simulation of galaxy subcluster mergers
p 3192 N93-26833
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834
Kinematics of compact groups and morphologies of the member galaxies p 3193 N93-26835
The dynamics of Abell 2634 p 3193 N93-26836
X ray opacity in cluster cooling flows
p 3193 N93-26837
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
Jet induced star formation in centrally dominant galaxies? p 3193 N93-26840
The detection of large amounts of cool, x ray absorbing gas in distant clusters of galaxies. What does this mean? p 3194 N93-26841
Mergers, cooling flows, and evaporation
p 3194 N93-26842
A neutral hydrogen survey of the Hydra 1 cluster
p 3194 N93-26843
Using x ray images to detect substructure in a sample of 40 Abell clusters p 3194 N93-26844
A study of the x ray environment of radio galaxies
p 3194 N93-26845
Multicolor photometry of x ray selected Abell clusters
p 3195 N93-26846
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Deep, wide-field, multi-band imaging of z approximately equal to 0.4 clusters and their environs
p 3195 N93-26848
The environment of x ray selected BL Lacs: Host galaxies and galaxy clustering p 3196 N93-26851
Reduction and analysis of VLA maps for 281 radio-loud quasars using the UNLV Cray Y-MP supercomputer
p 3197 N93-26855
Quasars in rich galaxy clusters p 3197 N93-26856
Removing Malmquist bias from linear regressions
p 3122 N93-26872
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
The galactic center stellar population in the near infrared p 3204 N93-28080
GALACTIC COSMIC RAYS
Description of alpha-nucleus interaction cross sections for cosmic ray shielding studies
[NASA-TP-3285] p 3138 N93-26905
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
GALACTIC EVOLUTION
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
The nature of faint emission-line galaxies
p 3173 N93-26716
Two protogalaxy candidates in one night
p 3173 N93-26717
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
A search for quasar protoclusters at z greater than 4
p 3174 N93-26721
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
Environmental influences on galaxy evolution
p 3175 N93-26727
Globular cluster systems as clues to galaxy evolution
p 3175 N93-26728
Galaxy tracers in N-body simulations
p 3176 N93-26732
The large-scale morphology of IRAS galaxies
p 3176 N93-26733
Subclustering in the hierarchical model of galaxy formation p 3176 N93-26734
Gas dynamic simulations of galaxy formation
p 3176 N93-26736
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
Do galactic potential wells depend on their environment? p 3177 N93-26739
Distant radio galaxies in the near IR
p 3177 N93-26742
Massive low surface brightness galaxies
p 3178 N93-26746

Oxygen abundances in low surface-brightness galaxies p 3178 N93-26747
Analysis of the Einstein sample of early-type galaxies p 3179 N93-26754
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
The evolution of the intergalactic medium and the origin of the galaxy luminosity function p 3180 N93-26759
Constraints on chemical evolution models from QSOALS abundances p 3182 N93-26769
The reionization of the universe: The feedback of galaxy formation on the intergalactic medium p 3182 N93-26771
Absorption spectra of Q 0000-263 and Q 1442+101 p 3182 N93-26773
Gas distribution and starbursts in shell galaxies p 3183 N93-26780
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
Evolution of luminous IRAS galaxies: Radio imaging p 3184 N93-26786
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
The multicomponent structure of bulges p 3187 N93-26800
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem p 3188 N93-26810
Tidal interactions and the formation of Magellanic spiral galaxies p 3190 N93-26821
Cluster tidal fields: Effects on disk galaxies p 3191 N93-26824
Dissipative merging of galaxies p 3191 N93-26827
Radio jets in colliding galaxies: Testing the interaction-activity connection p 3191 N93-26828
Declining rotation curves in interacting galaxies p 3192 N93-26829
A new observational and numerical study of tidal interactions in M81-M82-NGC3077 system p 3192 N93-26830
The nature of the evolution of galaxies by mergers p 3192 N93-26831
A numerical simulation of galaxy subcluster mergers p 3192 N93-26833
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834
Multicolor photometry of x ray selected Abell clusters p 3195 N93-26846
Searching for emission-line galaxies: The UCM survey p 3195 N93-26849
The ring around SN1987A p 3199 N93-26868
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
Automata network models of galaxy evolution p 3201 N93-26879
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888

GALACTIC HALOS
The evolution of the intergalactic medium and the origin of the galaxy luminosity function p 3180 N93-26759
Low redshift Lyman alpha absorption lines and the dark matter halos of disk galaxies p 3180 N93-26762
Ages, chemistry, and type 1A supernovae: Clues to the formation of the galactic stellar halo p 3187 N93-26803
A halo and a blow-out in NGC 253 p 3199 N93-26869
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
Spokes in ring galaxies p 3202 N93-26885
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889

GALACTIC NUCLEI
Nuclear activity and the environments of nearby radio galaxies p 3196 N93-26852
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867

GALACTIC RADIATION
The case of missing CO-13 in mergers p 3189 N93-26819

GALACTIC ROTATION
Evolution of molecular clouds p 3203 N93-26892

GALACTIC STRUCTURE
The Evolution of Galaxies and Their Environment [NASA-CP-3190] p 3171 N93-26706
Ways to improve your correlation functions p 3172 N93-26712
Environmental influences on galaxy evolution p 3175 N93-26727
Do galactic potential wells depend on their environment? p 3177 N93-26739
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Chemical abundances in low surface brightness galaxies: Implications for their evolution p 3178 N93-26748
The hot interstellar medium in NGC 1399 p 3179 N93-26753
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem p 3188 N93-26810
Numerical simulations of galactic wakes p 3189 N93-26818
Density wave triggered star formation in grand design spirals p 3190 N93-26820
Radio jets in colliding galaxies: Testing the interaction-activity connection p 3191 N93-26828
Mergers at z = 1 p 3192 N93-26832
Kinematics of compact groups and morphologies of the member galaxies p 3193 N93-26835
Using x ray images to detect substructure in a sample of 40 Abell clusters p 3194 N93-26844
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky [NASA-CR-193075] p 3171 N93-28414

GALAXIES
The Evolution of Galaxies and Their Environment [NASA-CP-3190] p 3171 N93-26706
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Globular cluster formation in merging galaxies? p 3175 N93-26729
The large-scale morphology of IRAS galaxies p 3176 N93-26733
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
Gas dynamic simulations of galaxy formation p 3176 N93-26736
The galaxy velocity field and CDM models p 3176 N93-26737
Do galactic potential wells depend on their environment? p 3177 N93-26739
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
CO deficiency in galaxies of the Fornax cluster? p 3185 N93-26791
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
High velocity clouds in nearby disk galaxies p 3187 N93-26804
A comparison of extinction curves for dust in galaxies of different Hubble types p 3187 N93-26805
Molecular clouds in the centers of galaxies: Constraints from HCN and CO-13 line emission p 3188 N93-26806
Galactic oscillations p 3188 N93-26808
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
Atomic hydrogen in the disturbed edge-on galaxy NGC 4631 p 3189 N93-26815
Numerical simulations of galactic wakes p 3189 N93-26818
Star formation in cooling flow galaxies p 3193 N93-26839
Jet induced star formation in centrally dominant galaxies? p 3193 N93-26840
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Deep, wide-field, multi-band imaging of z approximately equal to 0.4 clusters and their environs p 3195 N93-26848
Searching for emission-line galaxies: The UCM survey p 3195 N93-26849
The environment of x ray selected BL Lacs: Host galaxies and galaxy clustering p 3196 N93-26851
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883

GALERKIN METHOD
A Petrov-Galerkin mixed finite element method with exponential fitting [CWI-NM-R9204] p 3113 N93-27301

GALILEO SPACECRAFT
Science missions for lunar resources exploration p 2953 N93-28044

GALLIUM ANTIMONIDES
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules p 3066 N93-27962

GALLIUM ARSENIDES
Microwave characterization of slotline on high resistivity silicon for antenna feed network [NASA-TM-106058] p 3031 N93-27265
Investigation of misfit dislocation configurations in MBE-grown InGaAs layers on misaligned GaAs (001) substrates [DE93-007578] p 3151 N93-27522
Development of model based magnetic LP-LEC growth of large diameter GaAs [AD-A262361] p 3152 N93-27690
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Superlattice barrier varactors p 3012 N93-27738
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
New approach to the design of Schottky barrier diodes for THz mixers p 3019 N93-27778
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
A single-transistor memory cell and sense amplifier for a gallium arsenide dynamic random access memory [AD-A261975] p 3153 N93-27953
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules p 3066 N93-27962
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research [DE93-000084] p 3065 N93-28056

GALLIUM ISOTOPES
Status of the Soviet-American gallium experiment [DE93-009067] p 3218 N93-28157

GAME THEORY
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
Graphs and games [MEMO-1065] p 3120 N93-28074

GAMMA RAY BURSTS
Photoerosion in astrophysical environments p 3205 N93-28450

GAMMA RAY LASERS
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser [AD-A262421] p 3048 N93-27656

GAS ANALYSIS
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6 [PB93-174886] p 3077 N93-27407
Wide range H2 sensor using catalytic alloys [DE93-007591] p 3046 N93-28009

GAS COOLING
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871

GAS DENSITY
Low surface brightness galaxies p 3178 N93-26750
Neutral hydrogen at the present epoch: A constraint on the evolution of high redshift systems p 3181 N93-26763
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
An assessment of twilight airglow inversion procedures using atmosphere explorer observations [NASA-CR-193205] p 3072 N93-27483

GAS DETECTORS
The development of hydrogen sensor technology at NASA Lewis Research Center [NASA-TM-106141] p 3045 N93-27021
Wide range H2 sensor using catalytic alloys [DE93-007591] p 3046 N93-28009

GAS DISSOCIATION
Strong-field dissociation dynamics [DE93-006671] p 3136 N93-28310

GAS DYNAMICS
Gas dynamic simulations of galaxy formation p 3176 N93-26736
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction [NASA-TM-106119] p 3091 N93-27024

Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

GAS EVOLUTION
Evolution of molecular clouds p 3203 N93-26892
Status and integration of the gas generation studies performed for the hydrogen safety program
[DE93-008518] p 2994 N93-27105

GAS EXPANSION
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324

GAS FLOW
NTR plume modeling p 2978 N93-26929

GAS GENERATORS
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188

GAS IONIZATION
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

GAS JETS
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460

GAS MIXTURES
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135

GAS PIPES
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418

GAS RECOVERY
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136

GAS STREAMS
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface p 2928 N93-27222
Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365

GAS TEMPERATURE
Molecular gas temperature and density in spiral galaxies p 3185 N93-26792
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024

GAS TUNGSTEN ARC WELDING
A system for measurement and control of weld pool geometry in automatic arc welding
[ETN-93-93154] p 3050 N93-27380

GAS TURBINE ENGINES
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160

GAS TURBINES
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
By-passing of heat exchangers in gas turbines p 2922 N93-27189

GAS-METAL INTERACTIONS
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484

GAS-SOLID INTERACTIONS
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface p 2928 N93-27222

GASES
Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365

GATES (CIRCUITS)
Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator
[AD-A262352] p 3031 N93-27645

GAUGE INVARIANCE
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
The N equals 2 topological gauge theory, the Euler characteristic of moduli spaces, and the Casson invariant
[NIKHEF-H/91-28] p 3156 N93-27509

GAUGE THEORY
The Mathai-Quillen formalism and topological field theory
[NIKHEF-H/92-07] p 3155 N93-27496
The N equals 2 topological gauge theory, the Euler characteristic of moduli spaces, and the Casson invariant
[NIKHEF-H/91-28] p 3156 N93-27509
Extended pure Yang Mills gauge theories with scalar and tensor gauge fields
[SSCL-PREPRINT-769] p 3156 N93-27583
Large deviations theory and stochastic gauge fixing
[SSCL-PREPRINT-739] p 3126 N93-28193
The Gribov problem in the frame of stochastic quantization
[SSCL-PREPRINT-740] p 3157 N93-28194
A modified Faddeev-Popov formula and the Gribov ambiguity
[SSCL-PREPRINT-750] p 3157 N93-28209
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235

GEAR TEETH
Contact stress analysis of spiral bevel gears using nonlinear finite element static analysis
[NASA-TM-106176] p 3049 N93-27037
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
Face-gear drives: Design, analysis, and testing for helicopter transmission applications
[NASA-TM-106101] p 3050 N93-27133
Generation of helical gears with new surfaces, topology by application of CNC machines
[NASA-TM-106175] p 3051 N93-27687
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411

GEARS
Fault detection of helicopter gearboxes using the multi-valued influence matrix method
[NASA-TM-106100] p 3049 N93-27069
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
Generation of helical gears with new surfaces, topology by application of CNC machines
[NASA-TM-106175] p 3051 N93-27687
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050

GELATION
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

GELS
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

GENE EXPRESSION
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199

GENERAL AVIATION AIRCRAFT
Annual review of aircraft accident data: US general aviation calendar year 1989
[PB93-160687] p 2940 N93-27033

GENETIC ALGORITHMS
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230

GENETIC CODE
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199

GENETIC ENGINEERING
Characterization and classification of strains of Francisella tularensis isolated in the central Asian focus of the Soviet Union and in Japan
[FOA-B-40421-4.4] p 3082 N93-28200
Use of RNA hybridization in the diagnosis of a case of ulceroglandular tularemia
[FOA-B-40422-4.4] p 3083 N93-28212

GEOCHEMISTRY
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

GEODETIC COORDINATES
Some aspects of a 3-dimensional reference system for surveying in the Netherlands: Quality analysis of GPS phase observations
[REPT-92.1] p 3063 N93-27368

GEODETIC SURVEYS
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241

GEOGRAPHIC INFORMATION SYSTEMS
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419
Mesoscale and large-scale variability in California current system and its interaction with both California current and California undercurrent flows
[AD-A262195] p 3080 N93-27867

GEOLOGICAL FAULTS
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241

GEOLOGICAL SURVEYS
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241

GEOMAGNETIC TAIL
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144

GEOMAGNETISM
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834

GEOMETRIC RECTIFICATION (IMAGERY)
Desktop publishing in remote sensing
[BCRS-92-15] p 3063 N93-27702

GEOMETRICAL OPTICS
Harmonic oscillator states in aberration optics p 3143 N93-27331

GEOMETRICAL THEORY OF DIFFRACTION
Wide-angle radiation pattern calculation of paraboloidal reflector antennas: A comparative study
[EUT-91-E-252] p 3026 N93-27226

GEOMETRY
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
Survey of continuities of curves and surfaces
[CWI-CS-R9202] p 3097 N93-27495
Mathematical morphology as a tool for shape description
[CWI-BS-R9216] p 3119 N93-27991
Incidence and lattice calculus with applications to stochastic geometry and image analysis
[CWI-BS-R9213] p 3126 N93-28089

GEOPHYSICAL OBSERVATORIES
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834

GEOPHYSICS
Migration of seismic data in the double Radon transformed domain
[ETN-93-93596] p 3073 N93-28094

GEOSTROPHIC WIND
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284

GEOTHERMAL TECHNOLOGY
Geothermal research and development program
[DE93-008400] p 3071 N93-26671

GERMANIUM
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
The search for cold dark matter using germanium detectors p 3205 N93-28250
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304

GET AWAY SPECIALS (STS)
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260

GEYSERS
Geothermal research and development program
[DE93-008400] p 3071 N93-26671

GIBBS FREE ENERGY
Thermodynamic analysis of the binary systems Mo-V, Ni-V, Si-V, and Ti-V
[PB93-173185] p 3155 N93-26637

GIMBALS
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564

GLASS
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672

Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318

GLASS FIBERS
Melt-processing of lunar ceramics
p 3007 N93-26685

GLOBAL POSITIONING SYSTEM
GPS system simulation methodology
p 2984 N93-26990
Some aspects of a 3-dimensional reference system for surveying in the Netherlands: Quality analysis of GPS phase observations
[REPT-92.1] p 3063 N93-27368
GPS L1-L2 bias determination
[AD-A262141] p 2941 N93-27544
Follow-on operational test and evaluation of the NAVSTAR global positioning system air integration/installation program
[AD-A263067] p 2941 N93-27925
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241

GLOBULAR CLUSTERS
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Globular cluster systems as clues to galaxy evolution
p 3175 N93-26728
Globular cluster formation in merging galaxies?
p 3175 N93-26729

GLOVES
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
Power assist EVA glove development
p 3086 N93-27850

GLUONS
Time evolution of the quark-gluon plasma
[DE93-008703] p 3149 N93-27620

GOODNESS OF FIT
A Kolmogorov-Smirnov type test for ergodic diffusion processes
[INRIA-RR-1696] p 3122 N93-28447

GOVERNMENT/INDUSTRY RELATIONS
Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828

GRADIENTS
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer
p 2937 N93-27462

GRAIN BOUNDARIES
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366

GRAIN SIZE
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354

GRAMMARS
Using cached functions and constructors for incremental attribute evaluation
[RUU-CS-92-11] p 3094 N93-27369
Left-corner and head-corner chart parsing
[MEMO-INF-92-55] p 3096 N93-27489
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
An executable semantics for a subset of COLD
[CWI-CS-R9145] p 3097 N93-27493
GWB: Manual for the Grammar Work Bench, version 1.0
[TR-91-28] p 3100 N93-27885
The Grammar Workbench: A first step towards Lingware engineering
[TR-92-06] p 3100 N93-27902
Speeding up parallelism detection for attribute grammars
[RUU-CS-92-18] p 3107 N93-27909

GRANULAR MATERIALS
Plastic deformation of granular materials
[AD-A262449] p 3058 N93-27826
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236

GRAPH THEORY
Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1043] p 3115 N93-27469
On Hamilton-connectedness of Cayley graphs
p 3115 N93-27470
On Hamiltonian properties of 2-tough graphs
p 3115 N93-27471
Toughness and the cycle structure of graphs
p 3115 N93-27472
The Hopping Lemma p 3115 N93-27473
Cycles containing all vertices of maximum degree
p 3115 N93-27474
Long paths and cycles in tough graphs
p 3115 N93-27475
The complete closure of a graph
p 3115 N93-27476
Generalized closures of graphs p 3116 N93-27477
Two problems related to results of Chvatal-Erdos
p 3116 N93-27478
Concerning the circumference of certain families of graphs p 3116 N93-27479
Ore-type conditions for cycles through specified vertices p 3116 N93-27480
Hamilton cycles in path-tough graphs
p 3116 N93-27481
Cubic graphs containing k vertex-disjoint subgraphs of given cyclomatic number p 3116 N93-27482
Grid minors of graphs on the torus
[CWI-BS-R9205] p 3117 N93-27526
Classification of minimal graphs of given face-width on the torus
[CWI-BS-R9203] p 3117 N93-27607
Graphs on the torus and geometry of numbers
[CWI-BS-R9204] p 3117 N93-27608
Speeding up parallelism detection for attribute grammars
[RUU-CS-92-18] p 3107 N93-27909
Odd paths and odd circuits in planar graphs with two odd faces
[CWI-BS-R9218] p 3119 N93-27993
A note on 2-factors in graphs
[MEMO-1064] p 3120 N93-28073
Approximating treewidth and pathwidth of some classes of perfect graphs
[RUU-CS-92-29] p 3102 N93-28105
Drawing planar graphs using the lmc-ordering
[RUU-CS-92-33] p 3102 N93-28108

GRAPHITE
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303

GRAPHITE-EPOXY COMPOSITES
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Composite laminated bend analysis and experiments
p 2921 N93-27181
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel
p 2992 N93-28265

GRAPHS (CHARTS)
TS software user manual for the Time Series program and utilities
[PB93-167518] p 3091 N93-26635
One-third-integrality in the metric polytope
[CWI-BS-R9209] p 3112 N93-27293
On the treewidth and pathwidth of permutation graphs
[RUU-CS-92-13] p 3113 N93-27305
A tourist guide through treewidth
[RUU-CS-92-12] p 3114 N93-27370
Finding k disjoint paths in a directed planar graph
[CWI-BS-R9206] p 3095 N93-27379
On Hamilton-connectedness of Cayley graphs
p 3115 N93-27470
On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540
Integral solution to systems Ax less than or equal to b
[CWI-BS-R9217] p 3119 N93-27992
Odd paths and odd circuits in planar graphs with two odd faces
[CWI-BS-R9218] p 3119 N93-27993
Sparse arrangements and the number of views of polyhedral scenes
[RUU-CS-92-24] p 3120 N93-28065
A note on 2-factors in graphs
[MEMO-1064] p 3120 N93-28073
Graphs and games
[MEMO-1065] p 3120 N93-28074
Treewidth and pathwidth of permutation graphs
[RUU-CS-92-30] p 3101 N93-28093
A linear time algorithm for finding tree-decompositions of small treewidth
[RUU-CS-92-27] p 3102 N93-28103
Treewidth of chordal bipartite graphs
[RUU-CS-92-28] p 3102 N93-28104

GRAVITATION
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite
p 2924 N93-27199
The algebra of supertraces for 2+1 super de Sitter gravity p 3144 N93-27337
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197
Beyond metric gravity: Progress on PS-200
[DE93-008723] p 3158 N93-28461
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

GRAVITATIONAL CONSTANT
Spokes in ring galaxies p 3202 N93-26885

GRAVITATIONAL EFFECTS
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
Deep H alpha images of interacting galaxies
p 3191 N93-26826
The Middeck Active Control Experiment (MACE)
p 3059 N93-27896
The middeck active control experiment: Gravity and suspension effects p 3010 N93-27897

GRAVITATIONAL FIELDS
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
The use of satellites in gravity field determination and model adjustment
[ISBN-90-6275-802-9/CIP] p 2973 N93-27946
Variational methods in general relativity: Mitteleuropean mathematical inaccuracy and Italian rigour. The contribution of A. Palatini
[SSCL-PREPRINT-760] p 3156 N93-28145
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197

GRAVITATIONAL LENSES
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873

GRAVITATIONAL WAVE ANTENNAS
Six degrees of freedom vibration isolation using electromagnetic suspension p 2960 N93-27559

GRAVITATIONAL WAVES
The uncertainty principle in resonant gravitational wave antennae and quantum non-demolition measurement schemes p 3143 N93-27330
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions
p 3204 N93-28081

GRAVITY WAVES
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions
p 3204 N93-28081
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244

GRAY SCALE
Gray-scale granulometries compatible with spatial scalings
[CWI-BS-R9212] p 3121 N93-28088

GREASES
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914

GREAT LAKES (NORTH AMERICA)
The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049

GREEN'S FUNCTIONS
An efficient method for analyzing microstrip antennas with a dielectric cover using a spectral domain moment method
[EUT-91-E-255] p 3026 N93-27228
Fluctuations in quantum transport theories of nuclear matter
[KVI-930] p 3155 N93-27395
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191

GREENLAND
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834

Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0)
[AD-A262794] p 3081 N93-28377

GRID GENERATION (MATHEMATICS)
Grid adaption using Chimera composite overlapping meshes
[NASA-TM-106163] p 3111 N93-27065
Unstructured viscous grid generation by advancing-front method
[NASA-CR-191449] p 2929 N93-27067
Analysis of local uniform grid refinement
[CWI-NM-R9211] p 3114 N93-27364
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Adaptive EAGLE dynamic solution adaptation and grid quality enhancement p 2937 N93-27464
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443

GROUND STATIONS
The next generation of Palapa satellite (Palapa-C)
p 3024 N93-26659

GROUND TESTS
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201

GROUND TRACKS
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200

GROUND TRUTH
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497

GROUND WATER
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060

GROUP THEORY
A group-theoretical setting for some intersecting Sperner families
[MEMO-1060] p 3120 N93-28011

GROUP VELOCITY
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725

GROWTH
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415

GUANIDINES
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423

GULF OF MEXICO
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

GULFS
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227

GUN PROPELLANTS
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134

GUNN DIODES
Modeling, design, fabrication, and testing of InP Gunn devices in the D-band (110 GHz - 170 GHz)
p 3018 N93-27767

GUNS (ORDNANCE)
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator
p 2985 N93-27138
Transient simulation of ram accelerator flowfields
p 2986 N93-27139
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140

GYROSCOPIC STABILITY
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera
p 2923 N93-27194
TechSAT attitude control p 2924 N93-27197

H

H ALPHA LINE
Deep H alpha images of interacting galaxies
p 3191 N93-26826
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860

H BETA LINE
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860

H I REGIONS
Formation of massive clouds and dwarf galaxies during tidal encounters p 3190 N93-26822
The disk-halo interface in edge-on spirals
p 3198 N93-26865

H II REGIONS
Oxygen abundances in low surface-brightness galaxies p 3178 N93-26747
H II regions in the dwarf galaxy UGC-A 86
p 3178 N93-26749
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
The critical density for star formation in HII galaxies
p 3189 N93-26817
High chemical abundances in stripped Virgo spiral galaxies p 3191 N93-26825

H-INFINITY CONTROL
Mixed H2/H infinity control in a stochastic framework
[MEMO-COSOR-92-13] p 3109 N93-27232
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075

H-53 HELICOPTER
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268

HABITATS
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057

HADRONS
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Semiweak production of a top quark accompanied by a bottom quark and 2 jets at hadron colliders
[NIKHEF-H/91-27] p 3132 N93-27508
The improvement of hadronic matrix elements in lattice QCD
[SSCL-PREPRINT-737] p 3157 N93-28162
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235
Experimental challenges at future hadron colliders (lectures for the 1992 Saint Croix Summer School)
[DE93-008613] p 3140 N93-28429

HALL EFFECT
Spinning-current method for offset reduction in silicon Hall plates
[ISBN-90-6275-780-4/CIP] p 3152 N93-27873
Magnetic properties and critical behavior of the conductivity near the M-I transition
[DE93-011437] p 3032 N93-28217

HALOGENS
Energy transfer studies in interhalogen molecules
[AD-A262888] p 3137 N93-28375

HALOS
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Faint blue counts from formation of dwarf galaxies at z approximately equals 1 p 3177 N93-26744
Static galactic halo and galactic wind
p 3198 N93-26862
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
The disk-halo interface in edge-on spirals
p 3198 N93-26865

HAMILTON-JACOBI EQUATION
Balancing for nonlinear systems
[MEMO-1071] p 3121 N93-28156

HAMILTONIAN FUNCTIONS
The universal propagator p 3141 N93-27313
Proper-time relativistic dynamics p 3144 N93-27334
On harmonic oscillators and their Kemmer relativistic forms p 3144 N93-27336
Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340
Decoherence of multimode thermal squeezed coherent states p 3145 N93-27344
A study of electron transfer using a three-level system coupled to an ohmic bath p 3145 N93-27346
Symmetry algebra of a generalized anisotropic harmonic oscillator p 3122 N93-27347
From harmonic to anharmonic oscillators
p 3146 N93-27352
Energy and chemical change
[AD-A262359] p 3133 N93-27648
Solutions of the ARE in terms of the Hamiltonian for Riesz-spectral systems
[MEMO-1054] p 3119 N93-28002
Transformation of the Kepler problem
p 3156 N93-28068
A note on 2-factors in graphs
[MEMO-1064] p 3120 N93-28073
Quantum non-demolition measurements and generalized states at thermal equilibrium
[SSCL-PREPRINT-743] p 3158 N93-28386

HANDBOOKS
Handbook for users
[AD-A260738] p 3166 N93-27605
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116
Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379

HARDNESS
Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219

HARDWARE
Reliability analysis of complex models using sure bounds
[NASA-CR-191445] p 3091 N93-26897
XInPosse: Structural simulation for graphics hardware
[CWI-CS-R9208] p 3098 N93-27553
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-27969
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182

HARDWARE UTILIZATION LISTS
Space Station Freedom biomedical monitoring and countermeasures: Biomedical facility hardware catalog
[NASA-CR-193156] p 3081 N93-26700

HARMONIC GENERATIONS
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Optoelectronic Materials Center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A262377] p 3147 N93-27695
A study of subterahertz HEMT monolithic oscillators
p 3011 N93-27732
A 200 GHz tripler using single barrier varactor
p 3013 N93-27740

HARMONIC GENERATORS
Enhanced chromophore polymeric NLO materials
[AD-A262258] p 3147 N93-28111

HARMONIC OSCILLATION
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential
p 3141 N93-27314
Wave packet motion in harmonic potential and computer visualization p 3141 N93-27315

HARMONIC OSCILLATORS
Workshop on Harmonic Oscillators
[NASA-CP-3197] p 3141 N93-27311
Quons, an interpolation between Bose and Fermi oscillators p 3141 N93-27312
The universal propagator p 3141 N93-27313
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential
p 3141 N93-27314

The SU(2) action-angle variables
p 3129 N93-27316
Alternative descriptions of wave and particle aspects of the harmonic oscillator p 3142 N93-27317
Symmetries of coupled harmonic oscillators
p 3142 N93-27318
The q-harmonic oscillators, q-coherent states and the q-symplecton p 3142 N93-27319
Which Q-analogue of the squeezed oscillator?
p 3142 N93-27320
Deformation of supersymmetric and conformal quantum mechanics through affine transformations
p 3142 N93-27321
Phase of the quantum harmonic oscillator with applications to optical polarization p 3142 N93-27322
Condition for equivalence of q-deformed and anharmonic oscillators p 3143 N93-27323
Distribution of photons in squeezed polymode light
p 3143 N93-27325
Two photon annihilation operators and squeezed vacuum p 3143 N93-27326
Using harmonic oscillators to determine the spot size of Hermite-Gaussian laser beams p 3049 N93-27328
Squeezed states of damped oscillator chain
p 3143 N93-27329
The uncertainty principle in resonant gravitational wave antennae and quantum non-demolition measurement schemes p 3143 N93-27330
Harmonic oscillator states in aberration optics
p 3143 N93-27331
Point form relativistic quantum mechanics and relativistic SU(6) p 3144 N93-27332
On harmonic oscillators and their Kemmer relativistic forms p 3144 N93-27336
Quantum wormholes and harmonic oscillators
p 3144 N93-27338
On inducing finite dimensional physical field representations for massless particles in even dimensions p 3144 N93-27339
Galilean covariant harmonic oscillator
p 3145 N93-27341
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342
Wigner expansions for partition functions of nonrelativistic and relativistic oscillator systems
p 3145 N93-27343
Decoherence of multimode thermal squeezed coherent states p 3145 N93-27344
Quantum harmonic oscillator in a thermal bath
p 3145 N93-27345
Symmetry algebra of a generalized anisotropic harmonic oscillator p 3122 N93-27347
Fermion realization of exceptional Lie algebras from maximal unitary subalgebras p 3123 N93-27348
Quantized discrete space oscillators
p 3146 N93-27349
Orbit-orbit branching rules p 3146 N93-27350
From harmonic to anharmonic oscillators
p 3146 N93-27352
Atomic supersymmetry p 3146 N93-27353
The harmonic oscillator and nuclear physics
p 3146 N93-27354
On the spring and mass of the Dirac oscillator
p 3146 N93-27355
Second quantization in bit-string physics
p 3146 N93-27357
Covariant harmonic oscillators: 1973 revisited
p 3147 N93-27358
Calculation of the nucleon structure function from the nucleon wave function p 3147 N93-27359

HARMONICS
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314

HEAT AFFECTED ZONE
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940

HEAT EXCHANGERS
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems
[PB93-173490] p 3002 N93-26638
By-passing of heat exchangers in gas turbines
p 2922 N93-27189
Advanced interface heat exchangers for the Space Station main thermal bus p 2971 N93-27844
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939

HEAT FLUX
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method
p 3074 N93-28249
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350

HEAT PIPES
Radiator technology p 2983 N93-26979
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667

HEAT PUMPS
Diffusion-absorption heat pump
[PB93-165777] p 3037 N93-26620
The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545

HEAT RESISTANT ALLOYS
Fatigue in single crystal nickel superalloys
[AD-A262126] p 2999 N93-27674

HEAT SINKS
Metals production p 3214 N93-27970

HEAT STORAGE
Advanced solar dynamic technology program
p 2968 N93-27806
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984

HEAT TRANSFER
SAFSIM overview p 2981 N93-26959
Kinetic: A system code for analyzing nuclear thermal propulsion rocket engine transients
p 2981 N93-26960
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
Regression rate mechanism in a solid fuel ramjet
p 2922 N93-27185
Combined forced and free convection in a curved duct
p 2937 N93-27461
Thermal systems p 2971 N93-27843
Thermal control system technology discipline
p 2973 N93-27866
Natural convection around a smooth cylinder and a Spiro tube: Experiments and calculations
[ISBN-90-370-0072-X] p 3041 N93-27939
Lunar base thermal management/power system analysis and design p 3089 N93-27985

HEAT TRANSFER COEFFICIENTS
Steady heat transfer in a tube with turbulent flow
[OEFZS-4642] p 3042 N93-28205

HEAT TRANSMISSION
Space Station Freedom central thermal control system evolution p 2972 N93-27845
Thermal management in gas cooled solid state laser disk amplifiers
[DE93-009241] p 3048 N93-28230

HEAT TREATMENT
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672

HEATING
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350

HEAVY ELEMENTS
Heavy element abundances and massive star formation p 3172 N93-26709

HEAVY IONS
HZEFRG1: An energy-dependent semiempirical nuclear fragmentation model
[NASA-TP-3310] p 3138 N93-27031
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
Theoretical studies in nuclear physics
[DE93-010142] p 3139 N93-28215
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331
Nuclear interactions in high energy heavy ions and applications in astrophysics
[DE93-007302] p 3140 N93-28357

HEISENBERG THEORY
The SU(2) action-angle variables
p 3129 N93-27316
On the fermionic Heisenberg group and its Q-representations
[NIKHEF-H/92-11] p 3117 N93-27542

HELICAL FLOW
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154

HELICOPTER CONTROL
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays
p 2920 N93-27177

HELICOPTER DESIGN
Face-gear drives: Design, analysis, and testing for helicopter transmission applications
[NASA-TM-106101] p 3050 N93-27133
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241

HELICOPTER PROPELLER DRIVE
Fault detection of helicopter gearboxes using the multi-valued influence matrix method
[NASA-TM-106100] p 3049 N93-27069
Face-gear drives: Design, analysis, and testing for helicopter transmission applications
[NASA-TM-106101] p 3050 N93-27133
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268

HELICOPTERS
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
Dynamic System Coupler Program (DYSCO 4.1). Volume 1: Theoretical manual
[AD-B131156L] p 3098 N93-27531
Testing a wheeled landing gear system for the TH-57 helicopter
[AD-A262152] p 2942 N93-27547
Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual
[AD-B131157L] p 3099 N93-27589
Dynamic System Coupler Program (DYSCO 4.1). Volume 3: User's manual supplement
[AD-B131158L] p 3099 N93-27590

HELIOSPHERE
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079

HELIUM
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136

HELIUM IONS
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618

HELIUM ISOTOPES
Abundance of He-3 and other solar-wind-derived volatiles in lunar soil p 3209 N93-26692

HELIUM-NEON LASERS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613

HELMET MOUNTED DISPLAYS
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays
p 2920 N93-27177

HEMODYNAMICS
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181

HEMOGLOBIN
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293

HERCULES NOVA
A comparative examination of LMC X-4 and Her X-1 x ray double star systems
[MPE-232] p 3205 N93-28202

HERMES MANNED SPACEPLANE
European space programme p 2920 N93-27174

HETERODYNING
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733

A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions p 3013 N93-27743
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
Measurements of the single sideband suppression for a 650 GHz heterodyne receiver p 3020 N93-27780

HETEROJUNCTION DEVICES
An acoustic charge transport imager for high definition television applications
[NASA-CR-193081] p 3030 N93-26701

HETEROJUNCTIONS
Thermionic emission current in a single barrier varactor p 3012 N93-27735
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304

HEURISTIC METHODS
Specification of adaptive aiding systems
[AD-A263071] p 3087 N93-27927

HIGH ACCELERATION
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137

HIGH DEFINITION TELEVISION
Digital audio and video broadcasting by satellite p 3023 N93-26645
An acoustic charge transport imager for high definition television applications
[NASA-CR-193081] p 3030 N93-26701
Data compression techniques for digital video recording
[ETN-93-93610] p 3166 N93-27881

HIGH ELECTRON MOBILITY TRANSISTORS
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926

HIGH ENERGY INTERACTIONS
Collaborations among nuclear emulsion groups in Europe during the 1950's
[NOTA-INTERNA-973] p 3133 N93-27701
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235
Studies of high energy phenomena using muons
[DE93-009373] p 3140 N93-28367

HIGH GAIN
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314

HIGH LEVEL LANGUAGES
Parallel programming with PCN
[DE93-008087] p 3105 N93-26627
DEFMEF predesign document
[NLR-TP-91269-U] p 3098 N93-27543
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182

HIGH POWER LASERS
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451

HIGH PRESSURE
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems
[PB93-173490] p 3002 N93-26638
Transient simulation of ram accelerator flowfields p 2986 N93-27139
X ray and gamma ray spectroscopy of solids under pressure
[DE93-010966] p 2996 N93-28360

HIGH RESOLUTION
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Quantitative high-resolution electron microscopy and holography
[ISBN-90-6275-752-9/CIP] p 3046 N93-27875
High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

HIGH REYNOLDS NUMBER
Analysis of fluctuating static pressure measurements in a large high Reynolds number transonic cryogenic wind tunnel
[NASA-TM-108722] p 2947 N93-27142
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454

HIGH TEMPERATURE
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems
[PB93-173490] p 3002 N93-26638

HIGH TEMPERATURE AIR
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438

HIGH TEMPERATURE ENVIRONMENTS
Silicon carbide semiconductor technology for high temperature and radiation environments p 2978 N93-26928
Power management and distribution technology p 2983 N93-26978
Epoxy adhesives for field repair of composite structures p 2921 N93-27183

HIGH TEMPERATURE GASES
The ring around SN1987A p 3199 N93-26868
Gas in merging galaxies p 3202 N93-26886
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457

HIGH TEMPERATURE NUCLEAR REACTORS
Flow instability in particle-bed nuclear reactors p 2979 N93-26934

HIGH TEMPERATURE PLASMAS
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335

HIGH TEMPERATURE PROPELLANTS
Flow instability in particle-bed nuclear reactors p 2979 N93-26934

HIGH TEMPERATURE RESEARCH
Nuclear gas core propulsion research program p 2979 N93-26933

HIGH TEMPERATURE SUPERCONDUCTORS
MSFC nuclear thermal propulsion technology program p 2979 N93-26932
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576
Phase separation and superconductivity in the U equals infinity limit of the extended multiband Hubbard model
[SSCL-PREPRINT-763] p 3151 N93-27580
Mean field phase diagram of two band IJ model for CuO2 layers
[SSCL-PREPRINT-764] p 3151 N93-27581
Bismuth based ceramic superconductors: An experimental study on crystal growth and vortex dynamics
[ETN-93-93665] p 3004 N93-27945
Superconductive fluctuations in the density of states and tunneling resistance in high T(sub c) superconductors
[SSCL-PREPRINT-756] p 3153 N93-28141
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
X ray and gamma ray spectroscopy of solids under pressure
[DE93-010966] p 2996 N93-28360

HIGH TEMPERATURE TESTS
An overview of elevated temperature damage mechanisms and fatigue behavior of a unidirectional SCS-6/Ti-15-3 composite
[NASA-TM-106131] p 2989 N93-26702

HIGH VACUUM
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914
Metals production p 3214 N93-27970
Cryogenic ultrahigh vacuum scanning tunneling microscopy
[AD-A262264] p 2995 N93-28187

HIGH VOLTAGES
High-voltage pulse generator capable of 200 J at 5 kV
[AD-A262111] p 3031 N93-27673

HIGHWAYS
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419

HILBERT SPACE
The universal propagator p 3141 N93-27313
Measurability of operators
[W-9203] p 3125 N93-27930
The commutant lifting theorem for contractions on Krein spaces
[W-9107] p 3128 N93-28119
Notes on Krein spaces
[W-9109] p 3128 N93-28121
The commutant lifting theorem in the Krein space setting: A proof based on the coupling method
[W-9208] p 3128 N93-28125
On Radon-Nikodym derivatives of finitely additive measures induced by nonlinear transformations on Hilbert space
[MEMO-1063] p 3129 N93-28147

HISTOGRAMS
The large-scale morphology of IRAS galaxies p 3176 N93-26733
Estimating scene properties by analyzing color histograms with physics-based models
[AD-A262727] p 3111 N93-28399

HISTORIES
An expert system shell for inferring vegetation characteristics: Changes to the historical cover type database (Task F)
[NASA-CR-193067] p 3063 N93-27072
Leonardian fluid mechanics in the manuscript F
[PB93-178853] p 3040 N93-27411

HOLES (ELECTRON DEFICIENCIES)
Phase separation and superconductivity in the Kondo-like spin-hole coupled model
[SSCL-PREPRINT-759] p 3153 N93-28144

HOLOGRAPHY
Quantitative high-resolution electron microscopy and holography
[ISBN-90-6275-752-9/CIP] p 3046 N93-27875

HOMING DEVICES
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381

HOMOGENEOUS TURBULENCE
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586

HONEYCOMB CORES
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263

HONEYCOMB STRUCTURES
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules p 3066 N93-27962

HORIZON SCANNERS
TechSAT attitude control p 2924 N93-27197

HORIZONTAL SPACECRAFT LANDING
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018

HORN ANTENNAS
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
Progress in integrated-circuit horn antennas for receiver applications. Part 1: Antenna design p 3015 N93-27755
Progress in integrated-circuit horn antennas for receiver applications. Part 2: A 90 GHz quasi-integrated horn antenna receiver p 3016 N93-27756

HOT ELECTRONS
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783

HOT PRESSING
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113

HOT STARS
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883

HOT SURFACES
Computer-aided surface regression analysis p 2927 N93-27217

HOT-FILM ANEMOMETERS
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274

HOVERING
Transition aerodynamics for 20-percent-scale VTOL unmanned aerial vehicle
[NASA-TM-4419] p 2928 N93-27032

HTPB PROPELLANTS
Regression rate mechanism in a solid fuel ramjet p 2922 N93-27185
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188

HUBBLE SPACE TELESCOPE
Mergers at z = 1 p 3192 N93-26832

HULLS (STRUCTURES)
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454

HUMAN BEHAVIOR
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 3085 N93-28128
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307
HUMAN BEINGS
The saturating contact rate in marriage- and epidemic models
[CWI-AM-R9203] p 3124 N93-27297
The cumulative formulation of (physiologically) structured population models
[CWI-AM-R9205] p 3124 N93-27298
HUMAN FACTORS ENGINEERING
Comparison of portable crewmember protective breathing equipment (CPBE) designs
[DOT/FAA/AM-93/6] p 3086 N93-27121
Man-systems distributed system for Space Station Freedom p 2966 N93-27788
EVA/manned systems p 2966 N93-27789
Evolution of Space Station EMU PLSS technology recommendations p 2966 N93-27790
Evolving EVA system capability for the evolving Space Station Freedom requirements p 2966 N93-27791
EVA and telerobot interaction p 2967 N93-27792
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794
Man-systems integration and the man-machine interface p 2967 N93-27795
Manned systems technology discipline p 2972 N93-27860
Specification of adaptive aiding systems
[AD-A263071] p 3087 N93-27927
Considerations for lunar colony communications systems p 3030 N93-27983
HUMAN FACTORS LABORATORIES
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging p 3086 N93-27848
HUMAN PATHOLOGY
Growth factor involvement in tension-induced skeletal muscle growth
[NASA-CR-193023] p 3083 N93-27113
HUMAN PERFORMANCE
Aircraft accident report: Controlled collision with terrain GP Express Airlines, Inc., Flight 861, A Beechcraft C99, N118GP, Anniston, Alabama, 8 June 1992
[PB93-910403] p 2940 N93-27035
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 3085 N93-28128
HUMAN REACTIONS
Engineering design constraints of the lunar surface environment p 3022 N93-27975
HUMAN TOLERANCES
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
HUMIDITY
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Stress corrosion evaluation of HP 9Ni-4Co-0.20C steel
[NASA-TP-3384] p 3000 N93-28071
HURRICANES
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
Including maximum sustained wind speed in a time series model to forecast hurricane movement
[AD-A262510] p 3078 N93-27663
HYBRID CIRCUITS
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458
HYDRAULIC CONTROL
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
HYDRAULIC EQUIPMENT
Study of hydraulic actuation system for Space Shuttle main engine propellant valves
[NASA-CR-193136] p 3050 N93-27112
HYDRAZINE ENGINES
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216
Space Station propulsion system p 2969 N93-27817
HYDRAZINES
Propulsion technology discipline p 2973 N93-27863
HYDRIDES
Stability and reactivity of dimethylethoxysilane p 2997 N93-28258
HYDROCYANIC ACID
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
HYDRODYNAMIC EQUATIONS
Gas distribution and starbursts in shell galaxies p 3183 N93-26780
Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327
HYDRODYNAMICS
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
Numerical simulations of bent, disrupted radio jets p 3188 N93-26813
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
Modeling the behavior of materials
[DE93-010483] p 3060 N93-28161
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
High strain Lagrangian hydrodynamics: A three dimensional SPH code for dynamic material response
[AD-A262798] p 3043 N93-28378
HYDROFOIL CRAFT
HMS Speedy: Seakeeping trials, 25 February to 1 March 1982
[ARE-AMTE(H)-R84117] p 3021 N93-27853
HYDROFOIL OSCILLATIONS
HMS Speedy: Seakeeping trials, 25 February to 1 March 1982
[ARE-AMTE(H)-R84117] p 3021 N93-27853
HYDROGEN
Lareg area solar cells from lunar materials p 3066 N93-26688
High velocity clouds in nearby disk galaxies p 3187 N93-26804
A neutral hydrogen survey of the Hydra 1 cluster p 3194 N93-26843
Status and integration of the gas generation studies performed for the hydrogen safety program
[DE93-008518] p 2994 N93-27105
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
HYDROGEN ATOMS
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
HYDROGEN FUELS
The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
HYDROGEN IONS
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
HYDROGEN OXYGEN ENGINES
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535
Space Station propulsion system p 2969 N93-27817
HYDROGEN OXYGEN FUEL CELLS
SPE (tm) regenerative hydrogen/oxygen fuel cells for extraterrestrial surface and microgravity applications p 2969 N93-27813
Fuel cell energy storage for Space Station enhancement p 2969 N93-27815
SPE (tm) electrolyzers for space propulsion p 2970 N93-27819
HYDROGEN PLASMA
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
HYDROGEN PRODUCTION
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
Magnetic beneficiation of lunar soils p 3213 N93-27968
HYDROGEN SULFIDE
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938
HYDROLOGICAL CYCLE
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422
HYDROLOGY
BETELGUEUSE '90 campaign
[PREPRINT-751] p 3064 N93-27942
BOOTES '90 campaign
[PREPRINT-768] p 3064 N93-27943
HYDROLYSIS
Stability and reactivity of dimethylethoxysilane p 2997 N93-28258
HYDROPHONES
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system
[AD-A262712] p 3108 N93-28394
HYDROSTATICS
Hybrid bearings for turbopumps and the like
[NASA-CASE-MFS-28491-1] p 3052 N93-28326
HYDROXYL RADICALS
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
HYPERBOLIC DIFFERENTIAL EQUATIONS
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883
HYPERCUBE MULTIPROCESSORS
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
HYPERGEOMETRIC FUNCTIONS
On Zeilberger's algorithm and its q-analogue: A rigorous description
[CWI-AM-R9207] p 3101 N93-28086
HYPERONS
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
HYPERPLANES
The power of parallel projection
[RUU-CS-92-17] p 3100 N93-27908
Cuttings and applications
[RUU-CS-92-26] p 3122 N93-28166
HYPERSONIC AIRCRAFT
Aerodynamic analysis of hypersonic waverider aircraft
[NASA-CR-192981] p 2929 N93-27093
Hypersonics revisited p 2919 N93-27167
HYPERSONIC FLOW
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467
HYPERSONIC HEAT TRANSFER
Hypersonics revisited p 2919 N93-27167
HYPERSONIC SPEED
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460
HYPERSONIC VEHICLES
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018
HYPERSONIC WIND TUNNELS
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
HYPERSONICS
Hypersonic panel flutter in a rarefied atmosphere
[NASA-CR-4514] p 2929 N93-27084
The Center of Excellence for Hypersonics Training and Research at the University of Texas at Austin
[NASA-CR-193070] p 2930 N93-27126

Hypersonics revisited p 2919 N93-27167
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer p 2937 N93-27462

HYPERSPACES
The power of parallel projection [RUU-CS-92-17] p 3100 N93-27908
Cuttings and applications [RUU-CS-92-26] p 3122 N93-28166

HYPERVELOCITY GUNS
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219

HYPERVELOCITY IMPACT
TSS tether cable meteoroid/orbital debris damage analysis [NASA-TM-108404] p 2957 N93-27023
High strain Lagrangian hydrodynamics: A three dimensional SPH code for dynamic material response [AD-A262798] p 3043 N93-28378

HYPERVELOCITY PROJECTILES
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219

HYSTERESIS
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress [DE93-009760] p 3000 N93-28234

I

IBM PERSONAL COMPUTERS
TS software user manual for the Time Series program and utilities [PB93-167518] p 3091 N93-26635

ICE
Structural tailoring of aircraft engine blade subject to ice impact constraints [NASA-TM-106033] p 3055 N93-26999
Aircraft ice detectors and related technologies for onground and inflight applications [DOT/FAA/CT-92/27] p 2940 N93-27269
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil p 2933 N93-27440
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
Interaction between ice and propeller [VTT-TIED-1281] p 3051 N93-27832

ICE FORMATION
Effect of underwing frost on transport aircraft takeoff performance [DOT/FAA/CT-TN93/9] p 2940 N93-27252
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry [NASA-CR-191097] p 2940 N93-27267
Aircraft ice detectors and related technologies for onground and inflight applications [DOT/FAA/CT-92/27] p 2940 N93-27269
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil p 2933 N93-27440
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441

ICE MAPPING
Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0) [AD-A262794] p 3081 N93-28377

ICE PREVENTION
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438

ICE REPORTING
Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0) [AD-A262794] p 3081 N93-28377

IDEAL FLUIDS
Axisymmetric vortex sheet roll-up p 2938 N93-28078

IGNITERS
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188

ILLUMINATING
Faster Phong shading [CWI-CS-R9228] p 3103 N93-28221

ILMENITE
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Beneficiation of ilmenite from lumar analog p 2997 N93-26681
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689
Magnetic beneficiation of lunar soils p 3213 N93-27968

IMAGE ANALYSIS
Magnetotail structures in a simulated Earth's magnetosphere [NASA-CR-193090] p 3072 N93-27144
A system for measurement and control of weld pool geometry in automatic arc welding [ETN-93-93154] p 3050 N93-27380
Digital mapping inference mechanism: A process of knowledge extraction and hypotheses evaluation p 3063 N93-27504
Gray-scale granulometries compatible with spatial scalings [CWI-BS-R9212] p 3121 N93-28088
Estimating scene properties by analyzing color histograms with physics-based models [AD-A262727] p 3111 N93-28399

IMAGE FURNACES
Correction-free pyrometry in radiant wall furnaces [NASA-CASE-NPO-18655-1-CU] p 3046 N93-28322

IMAGE PROCESSING
Calibration of a shock wave position sensor using artificial neural networks [NASA-TM-106138] p 3045 N93-27001
A system for measurement and control of weld pool geometry in automatic arc welding [ETN-93-93154] p 3050 N93-27380
Wavelet local extrema applied to image processing [AD-A262362] p 3118 N93-27691
Desktop publishing in remote sensing [BCRS-92-15] p 3063 N93-27702
Mathematical morphology as a tool for shape description [CWI-BS-R9216] p 3119 N93-27991
Incidence and lattice calculus with applications to stochastic geometry and image analysis [CWI-BS-R9213] p 3126 N93-28089
An architecture for interactive raster graphics [CWI-CS-R9229] p 3102 N93-28102
Faster Phong shading [CWI-CS-R9228] p 3103 N93-28221
Restoration of incomplete contour images using Markov random fields [INRIA-RR-1688] p 3126 N93-28445
Progress in optical diagnostic development for the electro-thermal chemical program [DE93-009452] p 2997 N93-28452

IMAGE RECONSTRUCTION
Self-Referenced Speckle Holography (SRSH) image reconstruction performance [AD-A262487] p 3045 N93-27661

IMAGES
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder [NASA-CASE-LEW-15700-1] p 3168 N93-28130

IMAGING TECHNIQUES
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689
Low surface brightness galaxies p 3178 N93-26750
Correlation between low level fluctuations in the x ray background and faint galaxies p 3179 N93-26752
Ultraviolet Imaging Telescope (UIT) observations of galaxies p 3184 N93-26785
Evolution of luminous IRAS galaxies: Radio imaging p 3184 N93-26786
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
Deep, wide-field, multi-band imaging of z approximately equal to 0.4 clusters and their environs p 3195 N93-26848
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment [PB93-161768] p 3062 N93-27054
Magnetotail structures in a simulated Earth's magnetosphere [NASA-CR-193090] p 3072 N93-27144
EVA Glove Research Team [NASA-CR-193014] p 3086 N93-27847
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging p 3086 N93-27848
Quantitative high-resolution electron microscopy and holography [ISBN-90-6275-752-9/CIP] p 3046 N93-27875
A model-based approach for detection of objects in low resolution passive millimeter wave images [NASA-CR-193161] p 2943 N93-28418
Robust and fast computation of edge characteristics in image sequences [INRIA-RR-1689] p 3105 N93-28446

IMPACT DAMAGE
Structural tailoring of aircraft engine blade subject to ice impact constraints [NASA-TM-106033] p 3055 N93-26999
TSS tether cable meteoroid/orbital debris damage analysis [NASA-TM-108404] p 2957 N93-27023
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates [NASA-TM-107753] p 2990 N93-27141
Value of space defenses [DE93-003813] p 3127 N93-28295

IMPACT LOADS
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates [NASA-TM-107753] p 2990 N93-27141

IMPACT RESISTANCE
The environmental and impact resistance of adhesively bonded thermoplastic fibre composites [AD-A263202] p 2992 N93-28383

IMPACTORS
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates [NASA-TM-107753] p 2990 N93-27141

IMPEDANCE
Embedding impedance approximations in the analysis of SIS mixers p 3016 N93-27760

IMPEDANCE MATCHING
Active impedance matching of complex structural systems p 3060 N93-28169

IMPINGEMENT
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry [NASA-CR-191097] p 2940 N93-27267

IMPLANTATION
Shape optimization of tibial prosthesis components [NASA-CR-191123] p 3081 N93-27085

IMPULSES
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals [AD-A263019] p 3027 N93-27910

IMPURITIES
Mean field phase diagram of two band tJ model for CuO2 layers [SSCL-PREPRINT-764] p 3151 N93-27581

IN SITU MEASUREMENT
Moored instrument for time series studies of primary production and other microbial rate processes [DE93-010148] p 3079 N93-26943

IN-FLIGHT MONITORING
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448

INCOMPRESSIBLE BOUNDARY LAYER
Roughness-induced generation of crossflow vortices in three-dimensional boundary layers [NASA-CR-4505] p 2929 N93-27096
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432

INCOMPRESSIBLE FLOW
Parallel solution of high-order numerical schemes for solving incompressible flows [NASA-TM-4451] p 3106 N93-27040
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
Free boundary problems in fresh-salt groundwater flow [REPT-92-45] p 3041 N93-27882
Steady incompressible flow around objects in general coordinates with a multigrid solution method [REPT-92-48] p 3041 N93-27884

INDEPENDENT VARIABLES
Probabilistic assessment of composite structures [NASA-TM-106024] p 2990 N93-27092
Proper elimination of latent variables [MEMO-1072] p 3121 N93-28164

INDEXES (DOCUMENTATION)
NASA Small Business Innovation Research Program. Composite List of Projects, 1983 to 1989 [NASA-TM-104991] p 3164 N93-27639

Index expression belief networks for information disclosure
[TR-92-12] p 3167 N93-27915
Index expression belief networks for information disclosure
[RUU-CS-92-21] p 3167 N93-27929
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
Index of international publications in aerospace medicine
[AD-A262908] p 3084 N93-28306

INDIUM ARSENIDES
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Superlattice barrier varactors p 3012 N93-27738

INDIUM COMPOUNDS
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626

INDIUM GALLIUM ARSENIDES
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Investigation of misfit dislocation configurations in MBE-grown InGaAs layers on misaligned GaAs (001) substrates
[DE93-007578] p 3151 N93-27522
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781

INDIUM PHOSPHIDES
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
Modeling, design, fabrication, and testing of InP Gunn devices in the D-band (110 GHz - 170 GHz) p 3018 N93-27767
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781

INDONESIA
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659

INDUCED DRAG
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447

INDUCTION MOTORS
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573

INDUSTRIAL MANAGEMENT
Business reengineering in information intensive organizations
[ISBN-90-9005061-2] p 3164 N93-27937

INDUSTRIAL WASTES
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621

INELASTIC SCATTERING
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368

INEQUALITIES
A group-theoretical setting for some intersecting Sperner families
[MEMO-1060] p 3120 N93-28011

INERTIAL CONFINEMENT FUSION
Summary of progress in laser fusion; advanced technology developments: National Laser Users Facility news; and a laser system report --- laser fusion and laser energetics
[DE93-009054] p 3047 N93-27120
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421

INFERENCE
Statistical inference procedures for probability selection functions in long-term monitoring programs
[PB93-163012] p 3123 N93-26631
Index expression belief networks for information disclosure
[TR-92-12] p 3167 N93-27915
Index expression belief networks for information disclosure
[RUU-CS-92-21] p 3167 N93-27929
On modeling of if-then rules for probabilistic inference
[AD-A262789] p 3126 N93-28404

INFLATABLE STRUCTURES
A preliminary structural analysis of space-based inflatable tubular frame structures p 3086 N93-27849

INFORMATION DISSEMINATION
A usage and maintenance of meteorological satellite data p 3076 N93-26996
The NASA Scientific and Technical Information Program: Exploring challenges, creating opportunities
[NASA-SP-7103] p 3166 N93-27426
Handbook for users
[AD-A260738] p 3166 N93-27605

INFORMATION FLOW
Fault-tolerant onboard digital information switching and routing for communications satellites
[NASA-TM-4471] p 2956 N93-26895
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444

INFORMATION MANAGEMENT
NASA'S information technology activities for the 90's p 3165 N93-27046
White paper on science operations p 3165 N93-27047
The NASA Scientific and Technical Information Program: Exploring challenges, creating opportunities
[NASA-SP-7103] p 3166 N93-27426
Man-systems integration and the man-machine interface p 2967 N93-27795
Business reengineering in information intensive organizations
[ISBN-90-9005061-2] p 3164 N93-27937

INFORMATION PROCESSING (BIOLOGY)
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103

INFORMATION RETRIEVAL
Machine aided indexing from natural language text
[NASA-CR-4512] p 3164 N93-26901
Knowledge-based machine indexing from natural language text: Knowledge base design, development, and maintenance
[NASA-CR-4523] p 3164 N93-26902
Information technologies for astrophysics circa 2001 p 3165 N93-27045
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
The performance of cited references as an approach to information retrieval p 3166 N93-27503
Index expression belief networks for information disclosure
[TR-92-12] p 3167 N93-27915
Index expression belief networks for information disclosure
[RUU-CS-92-21] p 3167 N93-27929
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base p 3168 N93-28286

INFORMATION SYSTEMS
A prototype climate information system
[AD-A261799] p 3075 N93-26630
The Steward Observatory asteroid relational database p 3168 N93-26698
Workshop proceedings: Information Systems for Space Astrophysics in the 21st Century, volume 1
[NASA-CR-192825] p 3165 N93-27042
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
Astrophysics science operations in the Great Observatories era p 3165 N93-27044
Information technologies for astrophysics circa 2001 p 3165 N93-27045
NASA'S information technology activities for the 90's p 3165 N93-27046
White paper on science operations p 3165 N93-27047
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
The NASA Scientific and Technical Information Program: Exploring challenges, creating opportunities
[NASA-SP-7103] p 3166 N93-27426
Handbook for users
[AD-A260738] p 3166 N93-27605
Validated fault tolerant architectures for Space Station p 2964 N93-27707
Data management standards in Computer-Aided acquisition and Logistic Support (CALS) p 2964 N93-27714
An overview of MCC and its research p 2965 N93-27717
Evolving information systems: Beyond temporal information systems
[TR-92-04] p 3167 N93-27886
A meta model for update in evolving information systems
[TR-92-05] p 3167 N93-27887
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base p 3168 N93-28286
Data bases for LDEF results p 3168 N93-28287

INFORMATION THEORY
Elicitation of expert knowledge and assessment of imprecise prior densities for lifetime distributions
[MEMO-COSOR-92-12] p 3123 N93-27231

INFORMATION TRANSFER
EMAP monitor: February 1993 edition
[PB93-163020] p 3067 N93-26632

INFRARED ABSORPTION
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201

INFRARED ASTRONOMY
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
The large-scale morphology of IRAS galaxies p 3176 N93-26733
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
Starburst models of merging galaxies p 3183 N93-26778
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
Infrared coronal emission lines and the possibility of their maser emission in Seyfert nuclei p 3196 N93-26853
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky
[NASA-CR-193075] p 3171 N93-28414

INFRARED ASTRONOMY SATELLITE
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
The large-scale morphology of IRAS galaxies p 3176 N93-26733
IRAS studies of galactic supershells p 3183 N93-26776
Evolution of luminous IRAS galaxies: Radio imaging p 3184 N93-26786
The environments of Seyfert and Markarian galaxies p 3185 N93-26789
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
Luminosities of H alpha emitting regions in a pair of interacting galaxies in the Bootes void p 3188 N93-26812
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860

INFRARED DETECTORS
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779
Fractional brownian motion, wavelets, and infrared detector noise
[AD-A262956] p 3129 N93-28290

INFRARED FILTERS
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference
[AD-A263020] p 3031 N93-27911

INFRARED IMAGERY
Two protogalaxy candidates in one night p 3173 N93-26717
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Meteorological Satellite Center Technical Note, no. 25, 1992
[MSC-TN-25] p 3075 N93-26991
The relationship between satellite-derived cloud parameters and measured maximum wind speed in the typhoon genesis stage p 3075 N93-26993
A comparison of GMS low-level cloud motion winds with sea surface winds observed by ships over western part of the North Pacific Ocean p 3076 N93-26995
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference
[AD-A263020] p 3031 N93-27911

INFRARED LASERS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613

INFRARED PHOTOMETRY
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
The galactic center stellar population in the near infrared p 3204 N93-28080

INFRARED RADIATION
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds p 3201 N93-26878

Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

INFRARED REFLECTION
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318

INFRARED SOURCES (ASTRONOMY)
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731

INFRARED SPECTRA
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Silazine to silica p 2997 N93-28257
Optical characterization of LDEF contaminant film p 3149 N93-28274
Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365

INFRARED SPECTROSCOPY
Distant radio galaxies in the near IR p 3177 N93-26742
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651

INFRARED STARS
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky
[NASA-CR-193075] p 3171 N93-28414

INJECTION
Geothermal research and development program
[DE93-008400] p 3071 N93-26671

INJECTORS
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532

INJURIES
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409

INLET FLOW
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136

INLET PRESSURE
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679

INLET TEMPERATURE
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012

INORGANIC COMPOUNDS
Tailored organometallic polymers
[AD-A262446] p 3004 N93-27697

INPUT
Implementation of input command shaping to reduce vibration in flexible space structures p 3059 N93-27901

INPUT/OUTPUT ROUTINES
The ASCIS data flow graph semantics and textual format
[EUT-91-E-251] p 3093 N93-27243

INSPECTION
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-56
[NASA-TM-107560] p 2956 N93-27538

INSTANTONS
The N equals 2 topological gauge theory, the Euler characteristic of moduli spaces, and the Casson invariant
[NIKHEF-H/91-28] p 3156 N93-27509

INSTRUCTION SETS (COMPUTERS)
The ASCIS data flow graph semantics and textual format
[EUT-91-E-251] p 3093 N93-27243
A comparison of OBJ3 and ASF+SDF
[CWI-CS-R9223] p 3094 N93-27363
Associative matching for linear terms
[CWI-CS-R9224] p 3094 N93-27377
A predicate transformer for unification
[CWI-CS-R9227] p 3096 N93-27391

INSTRUMENT LANDING SYSTEMS
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017

INSULATION
ASRM test report: Autoclave cure process development
[NASA-CR-192535] p 2986 N93-27157

INSULATORS
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303

INTEGERS
Factorizations of a(sub n) +/- 1, 13 less than or equal to a less than 100
[CWI-NM-R9212] p 3114 N93-27366

INTEGRAL EQUATIONS
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224
Integrable symplectic maps
[SSCL-PREPRINT-744] p 3122 N93-28387

INTEGRAL ROCKET RAMJETS
Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187

INTEGRAL TRANSFORMATIONS
An efficient method for analyzing microstrip antennas with a dielectric cover using a spectral domain moment method
[EUT-91-E-255] p 3026 N93-27228

INTEGRALS
Distribution of photons in squeezed polymode light p 3143 N93-27325
Integral solution to systems Ax less than or equal to b
[CWI-BS-R9217] p 3119 N93-27992
Hyperasymptotics and the Stokes' phenomenon
[CWI-AM-R9206] p 3120 N93-28085

INTEGRATED CIRCUITS
Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator
[AD-A262352] p 3031 N93-27645
Optoelectronic Materials Center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A262377] p 3147 N93-27695
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
Progress in integrated-circuit horn antennas for receiver applications. Part 1: Antenna design p 3015 N93-27755
Progress in integrated-circuit horn antennas for receiver applications. Part 2: A 90 GHz quasi-integrated horn antenna receiver p 3016 N93-27756
Intelligent structures technology p 3061 N93-28176
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224
A maskless flip-chip solder bumping technique
[DE93-009631] p 3021 N93-28372
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381
Digital parallel processor array for optimum path planning
[NASA-CASE-NPO-18727-1-CU] p 3108 N93-28427
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

INTEGRATED OPTICS
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403

INTERACTING GALAXIES
Globular cluster systems as clues to galaxy evolution p 3175 N93-26728
Low surface brightness galaxies and tidally triggered star formation p 3178 N93-26745
Starburst models of merging galaxies p 3183 N93-26778
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
Luminosities of H alpha emitting regions in a pair of interacting galaxies in the Bootes void p 3188 N93-26812
The case of missing CO-13 in mergers p 3189 N93-26819
Formation of massive clouds and dwarf galaxies during tidal encounters p 3190 N93-26822
Models of the Cartwheel ring galaxy: Spokes and starbursts p 3190 N93-26823
Deep H alpha images of interacting galaxies p 3191 N93-26826
Dissipative merging of galaxies p 3191 N93-26827
Radio jets in colliding galaxies: Testing the interaction-activity connection p 3191 N93-26828
Declining rotation curves in interacting galaxies p 3192 N93-26829
A new observational and numerical study of tidal interactions in M81-M82-NGC3077 system p 3192 N93-26830
The nature of the evolution of galaxies by mergers p 3192 N93-26831
Mergers at z = 1 p 3192 N93-26832
A numerical simulation of galaxy subcluster mergers p 3192 N93-26833
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834
Kinematics of compact groups and morphologies of the member galaxies p 3193 N93-26835
The dynamics of Abell 2634 p 3193 N93-26836
Mergers, cooling flows, and evaporation p 3194 N93-26842

INTERACTIONS
Interaction between ice and propeller
[VTT-TIED-1281] p 3051 N93-27832

INTERCEPTION
Minimum effort interception of multiple targets p 2925 N93-27205
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206

INTERFEROMETERS
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Measurements of the single sideband suppression for a 650 GHz heterodyne receiver p 3020 N93-27780
Interferometer testbed: Overview and hardware summary p 3058 N93-27889
Optical interferometer testbed p 3060 N93-28168

INTERFEROMETRY
Calibration of a shock wave position sensor using artificial neural networks
[NASA-TM-106138] p 3045 N93-27001

INTERGALACTIC MEDIA
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Can quasars photoionize the intergalactic medium at high redshift? p 3179 N93-26756
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
The evolution of the intergalactic medium and the origin of the galaxy luminosity function p 3180 N93-26759
Testing the pressure-confined Ly alpha cloud model p 3181 N93-26764
On the evolution of Lyman alpha clouds based upon the Minihalo model p 3181 N93-26765
The reionization of the universe: The feedback of galaxy formation on the intergalactic medium p 3182 N93-26771
Numerical simulations of bent, disrupted radio jets p 3188 N93-26813
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880

INTERIOR BALLISTICS
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134
The effects of small changes in the input data on the determination of closed-bomb burning rates and surface area
[AD-A261969] p 3156 N93-27952

INTERLAYERS
Diamond composite films for protective coatings on metals and method of formation
[NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426

INTERMETALLICS
Aerospace applications of metal combustion p 2920 N93-27175
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
A maskless flip-chip solder bumping technique
[DE93-009631] p 3021 N93-28372

INTERNAL COMBUSTION ENGINES
Notes on the KIVA-2 software and chemically reactive fluid mechanics
[DE93-008850] p 3043 N93-28430

INTERNAL WAVES
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244
INTERNATIONAL COOPERATION
Dual use of distributed remote sensing satellites
[DE93-008852] p 3062 N93-26615
SOVCAN STAR: An international satellite system
p 3023 N93-26647
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
Collaborations among nuclear emulsion groups in Europe during the 1950's
[NOTA-INTERNA-973] p 3133 N93-27701
Mars exploration mission p 2953 N93-28045
INTERPLANETARY GAS
Gas in merging galaxies p 3202 N93-26886
INTERPLANETARY MAGNETIC FIELDS
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144
INTERPOLATION
Technical description LAM and OI: Limited area model and optimum interpolation analysis, second edition
[KNMI-TR-134A] p 3078 N93-27636
The identification of analytical device models
[ISBN-90-6275-764-2/CIP] p 3100 N93-27874
Finite interpolation of random fields
[CWI-BS-R9210] p 3126 N93-28087
Faster Phong shading
[CWI-CS-R9228] p 3103 N93-28221
INTERPROCESSOR COMMUNICATION
Complexity of scheduling multiprocessor tasks with prespecified processor allocations
[MEMO-COSOR-92-32] p 3106 N93-27361
Specification of MANIFOLD, version 1.0
[CWI-CS-R9220] p 3095 N93-27388
The impact of communication style on machine resource usage for the iWarp parallel processor
[AD-A262425] p 3107 N93-27657
Efficient communication for parallel computing
[AD-A261966] p 3108 N93-27951
A theory of processes with localities
[INRIA-RR-1632] p 3108 N93-28438
INTERSTELLAR CHEMISTRY
The origin and evolution of dust in interstellar and circumstellar environments
[NASA-CR-193025] p 3204 N93-27287
INTERSTELLAR EXTINCTION
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
INTERSTELLAR GAS
Gas dynamic simulations of galaxy formation
p 3176 N93-26736
Interstellar Mg II and C IV absorption by 1 1/2 galaxies along the sightline to MrK 205 p 3182 N93-26770
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
The disk-halo interface in edge-on spirals
p 3198 N93-26865
Gas in merging galaxies p 3202 N93-26886
Evolution of molecular clouds p 3203 N93-26892
INTERSTELLAR MATTER
Heavy element abundances and massive star formation p 3172 N93-26709
The hot interstellar medium in NGC 1399
p 3179 N93-26753
Evidence for a multiphase, inhomogeneous interstellar medium in damped Ly alpha systems
p 3180 N93-26760
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
Numerical simulations of bent, disrupted radio jets
p 3188 N93-26813
Numerical simulations of galactic wakes
p 3189 N93-26818
Influence of the active nucleus on the multiphase interstellar medium in NGC 1068 p 3196 N93-26854
Static galactic halo and galactic wind
p 3198 N93-26862
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
The disk-halo interface in edge-on spirals
p 3198 N93-26865
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
The ring around SN1987A p 3199 N93-26868
Infrared fine-structure line diagnostics of shrouded active galactic nuclei p 3199 N93-26870
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
The ISM in the M82 starburst p 3202 N93-26887
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane
p 3204 N93-26894
The origin and evolution of dust in interstellar and circumstellar environments
[NASA-CR-193025] p 3204 N93-27287
INTERSTITIALS
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
INTERVALS
Maximum imprecision related to intervals of measures and Bayesian inference with conjugate imprecise prior densities
[MEMO-COSOR-92-07] p 3124 N93-27276
INVENTIONS
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder
[NASA-CASE-LEW-15700-1] p 3168 N93-28130
Separation tool for multipin electrical connectors
[NASA-CASE-NPO-18786-1-CU] p 3052 N93-28131
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132
Motion-sensitive optical correlator
[NASA-CASE-NPO-18769-1-CU] p 3148 N93-28133
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 3148 N93-28135
INVENTORIES
World jet airplane inventory at year-end 1992
[PB93-174324] p 2928 N93-27405
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058
INVENTORY MANAGEMENT
Minimizing total inventory cost on a single machine in just-in-time manufacturing
[MEMO-COSOR-92-20] p 3093 N93-27247
INVERSE KINEMATICS
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
INVERSIONS
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
Some inverse problems for Jacobi and arrow matrices
[AD-A262336] p 3118 N93-27644
INVERTED CONVERTERS (DC TO AC)
A PWM current-source inverter for interconnection between a photovoltaic array and the utility line
[EUT-91-E-253] p 3065 N93-27227
INVISCID FLOW
Unstructured viscous grid generation by advancing-front method
[NASA-CR-191449] p 2929 N93-27067
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
On steady, inviscid shock waves at continuously curved, convex surfaces
[CWI-NM-R9202] p 3039 N93-27299
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer
p 2937 N93-27462
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443
IODINE
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
ION ACCELERATORS
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424
ION BEAMS
Overview of charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-007898] p 3131 N93-26626
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667
Accelerator Mass Spectrometry facility (AMS)
[AD-A262458] p 3134 N93-27829
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366
ION CURRENTS
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424
ION DENSITY (CONCENTRATION)
Modelling of plasmaspheric flows
p 3150 N93-28412
ION ENGINES
The 100-500 kWe NEP systems p 2983 N93-26984
Thruster models for NEP system analysis
p 2984 N93-26988
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424
ION EXCHANGE MEMBRANE ELECTROLYTES
Fuel cell technology for lunar surface operations
p 3067 N93-27965
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
ION EXCHANGE RESINS
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
ION EXCHANGING
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
ION IMPLANTATION
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
ION PROPULSION
NEP technology: FY 1992 milestones (NASA LeRC)
p 2983 N93-26977
The 100-500 kWe NEP systems p 2983 N93-26984
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424
ION SCATTERING
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
ION SOURCES
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
ION TRAPS (INSTRUMENTATION)
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618
IONIC COLLISIONS
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520

Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331

IONIC REACTIONS
Novel gas phase ion molecule reactions of C60(+ +) with O2
[AD-A262821] p 3136 N93-28225

IONIZATION
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614
Quasiclassical approach to ionization of atoms by strong laser pulses: The comparison with the simpleman's models and Newtonian dynamics
[DE93-008738] p 3137 N93-28463

IONIZATION CROSS SECTIONS
HZEFRG1: An energy-dependent semiempirical nuclear fragmentation model
[NASA-TP-3310] p 3138 N93-27031
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520

IONIZED GASES
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
The disk-halo interface in edge-on spirals p 3198 N93-26865
Gas in merging galaxies p 3202 N93-26886

IONIZERS
The 80 kV electrostatic wire septum for AmPS p 3139 N93-28340

IONIZING RADIATION
Searching for Lyman alpha emission from a possible Zel'dovich pancake p 3179 N93-26755
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772
Engineering design constraints of the lunar surface environment p 3022 N93-27975
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298

IONOSPHERIC DISTURBANCES
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

IONOSPHERIC ELECTRON DENSITY
GPS L1-L2 bias determination
[AD-A262141] p 2941 N93-27544

IONOSPHERIC PROPAGATION
GPS L1-L2 bias determination
[AD-A262141] p 2941 N93-27544
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. A: Multiband dipole antenna
[AD-A262010] p 3027 N93-27668
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

IONS
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

IRAN
Zohreh: The Iranian domestic satellite system p 3023 N93-26649

IRON
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313

IRON ALLOYS
Material analysis of austempered ductile iron
[AD-A261953] p 3000 N93-27921
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313

IRON COMPOUNDS
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228

IRRADIANCE
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015

IRRADIATION
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301

IRREGULAR GALAXIES
What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
Far-infrared line images of dwarf galaxies p 3186 N93-26797

ISCCP PROJECT
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions
[NASA-CR-193158] p 3064 N93-28417

ISING MODEL
Number of saddle points of the energy surface in SK spin-glass
[SSCL-PREPRINT-726] p 3134 N93-28099
Electronic structure theory of alloy phase stability
[DE93-009547] p 3000 N93-28232

ISLANDS
Atoll Research Bulletin numbers 355-364: 40th anniversary issue
[PB93-169654] p 3062 N93-27421

ISOCHORIC PROCESSES
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871

ISOMERS
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158

ISOTOPE EFFECT
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293

ITERATION
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
Stability of parallel Volterra-Runge-Kutta methods
[CWI-NM-R9207] p 3106 N93-27304
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441

ITERATIVE SOLUTION
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
Diffusion-accelerated solution of the 2-D S(sub n) equations with bilinear-discontinuous differencing
[DE93-008793] p 3117 N93-27621
The Monte Carlo/S(sub N) hybrid method with orthogonal interface basis vectors
[DE93-005462] p 3104 N93-28299

IUE
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
IUEAGN: A database of ultraviolet spectra of active galactic nuclei p 3197 N93-26858

J

J INTEGRAL
Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182

JACOBI MATRIX METHOD
Some inverse problems for Jacobi and arrow matrices
[AD-A262336] p 3118 N93-27644
Transformation of the Kepler problem p 3156 N93-28068

JAPANESE SPACE PROGRAM
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652
Mars exploration mission p 2953 N93-28045

JAPANESE SPACECRAFT
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Manned engineering test satellites p 2948 N93-28016
Conceptual study on manned engineering test satellites p 2949 N93-28017
Artificial gravity experiment satellites p 2949 N93-28018
Linearly connected solar power satellite p 2949 N93-28019
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022
Conceptual study of debris observation and arresting experiment satellite p 2950 N93-28024
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025
Conceptual study of fly-back booster p 2950 N93-28026
Fly-back booster p 2950 N93-28027
Conceptual study of fly-back booster p 2950 N93-28028
Conceptual study of manned lunar transportation system p 2951 N93-28030
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Conceptual study of lunar landing modules p 2952 N93-28043
Mars revolving observation satellite p 2953 N93-28047

JET AIRCRAFT
World jet airplane inventory at year-end 1992
[PB93-174324] p 2928 N93-27405

JET FLOW
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449

JET MIXING FLOW
Experimental investigation of crossflow jet mixing in a rectangular duct
[NASA-TM-106152] p 2943 N93-27026
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow
[NASA-TM-106179] p 2944 N93-27128
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160
Experimental study of cross flow mixing in cylindrical and rectangular ducts
[NASA-CR-187141] p 2945 N93-27680
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252

JET STREAMS (METEOROLOGY)
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284

JOINTS (JUNCTIONS)
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872

JOSEPHSON JUNCTIONS
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz p 3014 N93-27749
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758
Noise in Josepson effect mixers and the RSJ model p 3016 N93-27762

Fabrication and characterization of high current-density, submicron, NbN/MgO/NbN tunnel junctions
p 3017 N93-27763
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Source conductance scaling for high frequency superconducting quasiparticle receivers
p 3018 N93-27771
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774

K

K-EPSILON TURBULENCE MODEL
Calculations of turbulent separated flows
[NASA-TM-106154] p 3039 N93-27161
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434
KALMAN FILTERS
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference
[AD-A263020] p 3031 N93-27911
Filtering, statistical signal processing and variational problems
[AD-A262276] p 3028 N93-28238
Using pseudo Kalman-filters in the presence of constraints application to sensing behaviors
[INRIA-RR-1669] p 3122 N93-28442
KAONS
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
Leading non-logarithmic contribution to the electropenguin diagram and phenomenology of kaon decays
[SSCL-PREPRINT-745] p 3137 N93-28388
KAPTON (TRADEMARK)
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
An XPS study of space-exposed polyimide film
p 3007 N93-28267
KARMAN VORTEX STREET
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
KEPLER LAWS
Transformation of the Kepler problem
p 3156 N93-28068
KERNEL FUNCTIONS
Asynchronous communication in process algebra (extended abstract)
[CWI-CS-R9206] p 3098 N93-27551
KEVLAR (TRADEMARK)
Cosmology with liquid mirror telescopes
p 3171 N93-26708
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
KINEMATICS
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem
p 3188 N93-26810
Kinematics of compact groups and morphologies of the member galaxies p 3193 N93-26835
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging
p 3086 N93-27848
KINETIC EQUATIONS
Kinetic: A system code for analyzing nuclear thermal propulsion rocket engine transients
p 2981 N93-26960
KINETIC THEORY
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
KINETICS
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
KLEIN-GORDON EQUATION
On the spring and mass of the Dirac oscillator
p 3146 N93-27355
KLYSTRONS
New results and applications for the quasioptical gyrotron
[AD-A261961] p 3046 N93-27950
KNEE (ANATOMY)
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
KNOWLEDGE
A brief survey of zero-knowledge proofs
[CWI-CS-R9232] p 3101 N93-27996
KNOWLEDGE BASED SYSTEMS
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
Constraints logic programming in knowledge-based planning domains
[AD-A262958] p 3104 N93-28291
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Knowledge-based machine indexing from natural language text: Knowledge base design, development, and maintenance
[NASA-CR-4523] p 3164 N93-26902
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
KNOWLEDGE REPRESENTATION
Dynamic modal predicate logic
[CWI-CS-R9237] p 3101 N93-28001
KOLMOGOROFF-SMIRNOFF TEST
A Kolmogorov-Smirnov type test for ergodic diffusion processes
[INRIA-RR-1696] p 3122 N93-28447
KONDO EFFECT
Phase separation and superconductivity in the Kondo-like spin-hole coupled model
[SSCL-PREPRINT-759] p 3153 N93-28144
KOVAR (TRADEMARK)
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
KRYPTON
The 100-500 kWe NEP systems p 2983 N93-26984
KUIPER AIRBORNE OBSERVATORY
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796

L

LABORATORIES
Summer research program (1992). Graduate student
[AD-A261971] p 3163 N93-28223
LAGRANGIAN FUNCTION
High strain Lagrangian hydrodynamics: A three dimensional SPH code for dynamic material response
[AD-A262798] p 3043 N93-28378
LAKES
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
LAMB WAVES
A study of the higher order Lamb resonances on elastic shells: Their prediction and interpretation
[AD-A262237] p 3130 N93-27933
LAMINAR BOUNDARY LAYER
The influence of bulges on boundary-layer instability
p 2932 N93-27435
High-lift aerodynamics: Prospects and plans
p 2933 N93-27442
LAMINAR FLOW
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
The influence of bulges on boundary-layer instability
p 2932 N93-27435
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations
p 2935 N93-27451
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
LAMINAR HEAT TRANSFER
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460
LAMINAR WAKES
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
LAMINATES
Dynamic characteristics of specialty composite structures with embedded damping layers
[NASA-TM-106165] p 2989 N93-26705
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Composite laminated bend analysis and experiments
p 2921 N93-27181
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266
LAND MANAGEMENT
Sustainable agriculture and the environment in the humid tropics
[PB93-173920] p 3068 N93-27402
LAND MOBILE SATELLITE SERVICE
A communications system for the United Nations Transitional Authority in Cambodia (UNTAC)
p 3025 N93-26663
LAND USE
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401
Sustainable agriculture and the environment in the humid tropics
[PB93-173920] p 3068 N93-27402
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515
LANDAU-GINZBURG EQUATIONS
The onset of vortex turbulence p 2938 N93-28251
LANDING GEAR
Testing a wheeled landing gear system for the TH-57 helicopter
[AD-A262152] p 2942 N93-27547
LANDSAT SATELLITES
Remotely sensed data from space: Distribution, pricing, and applications. An OTA background paper
p 3062 N93-27066
LANGUAGES
Index expression belief networks for information disclosure
[TR-92-12] p 3167 N93-27915
LANTHANUM COMPOUNDS
Effects of composition on sintering of current interconnects in SOFC
[DE93-004837] p 3065 N93-27613
LANTHANUM OXIDES
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
LAPSE RATE
Airmass modification by vertical motion: Discussion and case study
[PB93-160596] p 3079 N93-28134
LARGE SPACE STRUCTURES
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Passive damping augmentation of flexible beam-like lattice trusses for large space structures
p 2923 N93-27192
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
Advanced actuators for the control of large space structures p 2962 N93-27572
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576
An evolutionary construction facility for Space Station Freedom p 2971 N93-27839
Automated assembly of large space structures
p 2971 N93-27842
MODE: Structural Test Article (STA)
p 3059 N93-27894
Implementation of input command shaping to reduce vibration in flexible space structures
p 3059 N93-27901

Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269

LASER ALTIMETERS

Diode-pumped laser altimeter
[NASA-CR-193166] p 3047 N93-27153

LASER APPLICATIONS

Systems analysis on laser beamed power
[NASA-CR-193206] p 3047 N93-27036
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333

LASER ARRAYS

Solid state research
[AD-A262874] p 3154 N93-28247

LASER BEAMS

Diode-pumped laser altimeter
[NASA-CR-193166] p 3047 N93-27153
Using harmonic oscillators to determine the spot size of Hermite-Gaussian laser beams p 3049 N93-27328
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333

LASER DAMAGE

Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431

LASER FUSION

Summary of progress in laser fusion; advanced technology developments: National Laser Users Facility news; and a laser system report --- laser fusion and laser energetics
[DE93-009054] p 3047 N93-27120

LASER HEATING

Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052

LASER INDUCED FLUORESCENCE

Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV)
p 2935 N93-27454
Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365
Energy transfer studies in interhalogen molecules
[AD-A262888] p 3137 N93-28375

LASER MATERIALS

Sub-nanosecond optical diagnostics of laser-material interaction and dynamic microstructure of materials
[DE93-008702] p 3049 N93-28369

LASER MODES

Aberration correction of unstable resonators
[NASA-CASE-NPO-18662-1-CU] p 3148 N93-28428

LASER OUTPUTS

Diode-pumped laser altimeter
[NASA-CR-193166] p 3047 N93-27153
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A262421] p 3048 N93-27656
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132

LASER POWER BEAMING

Systems analysis on laser beamed power
[NASA-CR-193206] p 3047 N93-27036
Power beaming options for the Space Station
p 2969 N93-27812
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

LASER PUMPING

Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A262421] p 3048 N93-27656

LASER SPECTROSCOPY

Laser spectroscopy and dynamics of transient species
[DE93-011265] p 3048 N93-28365

LASER TARGETS

Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185

LASERS

Aberration correction of unstable resonators
[NASA-CASE-NPO-18662-1-CU] p 3148 N93-28428

LATERAL CONTROL

Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite
p 2925 N93-27203

LATTICE PARAMETERS

Convergence of compact lattice scalar field theory to its continuum limit
[SSCL-PREPRINT-771] p 3156 N93-27584
Phase transitions in the dual lattice in Potts model
[ROM1F-90-752] p 3152 N93-27700
A lattice computation of the decay constant of the B-meson
[SSCL-PREPRINT-747] p 3135 N93-28198
Hadron structure on the lattice
[SSCL-PREPRINT-754] p 3157 N93-28211

LATTICES

A lattice computation of the decay constant of the B-meson
[SSCL-PREPRINT-747] p 3135 N93-28198
First calculation of D(+) approaches (K bar)(*0)e(+)nu(sub e) in lattice QCD
[SSCL-PREPRINT-748] p 3135 N93-28208

LATTICES (MATHEMATICS)

The set of super-stable marriages forms a distributive lattice
[MEMO-1052] p 3125 N93-27907
Incidence and lattice calculus with applications to stochastic geometry and image analysis
[CWI-BS-R9213] p 3126 N93-28089

LAUNCH VEHICLE CONFIGURATIONS

A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123

LAUNCH VEHICLES

A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
Propulsion needs for lunar/Mars missions
p 2967 N93-27798

LAUNCHERS

Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137

LEAD ACID BATTERIES

Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038

LEAD ZIRCONATE TITANATES

Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305

LEADING EDGE SLATS

Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252

LEADING EDGES

Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132
Leading edge vortices in a chordwise periodic flow
p 2927 N93-27218
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274
Three-dimensional compressible stability-transition calculations using the spatial theory
p 2931 N93-27431
Aerodynamics of a finite wing with simulated ice
p 2932 N93-27437
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble
p 2936 N93-27457
Prediction of vortex breakdown on a delta wing
p 2936 N93-27459
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel
p 2992 N93-28265

LEAKAGE

The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132

LEAST SQUARES METHOD

Identification of significant outliers in time series data
[AD-A262437] p 3125 N93-27659
A comparison of variable selection criteria for multiple linear regression: A second simulation study
[AD-A262512] p 3125 N93-27664
Finite interpolation of random fields
[CWI-BS-R9210] p 3126 N93-28087
Adaptive filtering methods: On methods to use a priori information in order to reduce complexity while maintaining convergence properties
[ISBN-90-9005143-0] p 3121 N93-28109

LENNARD-JONES POTENTIAL

Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352

LENS ANTENNAS

Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
Zone plate lens antennas for millimeter and submillimeter wavelengths p 3016 N93-27757
Double-slot antennas on extended hemispherical dielectric lenses p 3016 N93-27759

LENSES

Double-slot antennas on extended hemispherical dielectric lenses p 3016 N93-27759

LETHALITY

User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs
[RTP/2180/01] p 3099 N93-27852

LEVITATION

An electromagnetically levitated two-axis gimbaless pointing mechanism p 2961 N93-27565

LIAPUNOV FUNCTIONS

Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
Robust control of robots using only position measurements
[MEMO-1073] p 3110 N93-28092

LIE GROUPS

Deformation of supersymmetric and conformal quantum mechanics through affine transformations
p 3142 N93-27321
The algebra of supertraces for 2+1 super de Sitter gravity p 3144 N93-27337
Symmetry algebra of a generalized anisotropic harmonic oscillator p 3122 N93-27347
Fermion realization of exceptional Lie algebras from maximal unitary subalgebras p 3123 N93-27348
The harmonic oscillator and nuclear physics
p 3146 N93-27354
Symmetries and motions in manifolds
[NIKHEF-H/92-08] p 3128 N93-27510
On the fermionic Heisenberg group and its Q-representations
[NIKHEF-H/92-11] p 3117 N93-27542
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143
Continuous symmetries of discrete equations
[SSCL-PREPRINT-738] p 3121 N93-28163

LIFE (DURABILITY)

Contactless microwave lifetime measurement
[ETN-93-93595] p 3027 N93-27870
LDEF materials data analysis: Representative examples p 2998 N93-28285
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424

LIFE SCIENCES

Aerospace medicine and biology: A continuing bibliography with indexes (supplement 373)
[NASA-SP-7011(373)] p 3083 N93-26945

LIFE SUPPORT SYSTEMS

1991 NASA Life Support Systems Analysis workshop
[NASA-CR-4466] p 3085 N93-27100
1992 NASA Life Support Systems Analysis workshop
[NASA-CR-4467] p 3085 N93-27101
Environmental control and life support system
p 2965 N93-27718
Environmental control and life support system evolution p 2965 N93-27719
Technologies for ECLSS evolution
p 2965 N93-27720
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724
JSC ECLSS R/T program overview
p 2966 N93-27725
Evolving EVA system capability for the evolving Space Station Freedom requirements p 2966 N93-27791
Environmental control and life support systems
p 2972 N93-27858
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
Manned lunar surface site p 2951 N93-28033

LIFT
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport [NASA-TP-3333] p 2938 N93-28070

LIGANDS
Recovery and separation of precious metals from space p 3001 N93-26686

LIGHT AMPLIFIERS
Thermal management in gas cooled solid state laser disk amplifiers [DE93-009241] p 3048 N93-28230

LIGHT ELEMENTS
Photoerosion in astrophysical environments p 3205 N93-28450

LIGHT MODULATION
Full complex modulation using two one-parameter spatial light modulators [NASA-CASE-MSC-22255-1] p 3148 N93-28135

LIGHT SOURCES
Workshop on scientific applications of short wavelength coherent light sources [DE93-009617] p 3148 N93-28456

LIGHTNING
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds [AD-A262673] p 3078 N93-28115

LIMITS (MATHEMATICS)
Polynomial systems with centers and limit cycles [REPT-92-38] p 3118 N93-27869
Bifurcation of limit cycles in a particular class of quadratic systems with two centres [REPT-92-43] p 3119 N93-27931
Some limit theorems in log density [W-9108] p 3126 N93-28120

LINE OF SIGHT
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays p 2920 N93-27177

LINE SHAPE
Bibliography on atomic line shapes and shifts [PB93-173433] p 3132 N93-27529

LINE SPECTRA
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
The nature of faint emission-line galaxies p 3173 N93-26716
Constraints on chemical evolution models from QSOALS abundances p 3182 N93-26769
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
Emission line gas in early-type galaxies: Kinematics and physical conditions p 3200 N93-26874
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
The ISM in the M82 starburst p 3202 N93-26887
The Lyman alpha forest of the high-z quasar 0000-263 p 3203 N93-26890
H1 in RSA galaxies p 3203 N93-26891
Bibliography on atomic line shapes and shifts [PB93-173433] p 3132 N93-27529

LINEAR ACCELERATORS
Further time-resolved electron-beam characterizations with optical transition radiation [DE93-007891] p 3131 N93-26625
Solid state x ray detector calibration techniques and linac beam intensity measurements [AD-A262097] p 3153 N93-28177
Enhanced higher order parametric x radiation production [AD-A262100] p 3135 N93-28178
NIKHEF-K contributions to the 3rd European Particle Accelerator Conference [NIKHEF-AMPS-92-02] p 3139 N93-28337
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
Mechanical design philosophy and construction of the Amsterdam Pulse Stretcher ring AmPS p 3139 N93-28339
The 80 kV electrostatic wire septum for AmPS p 3139 N93-28340
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341
High power density, thin magnetic DC septa for AmPS p 3140 N93-28342
Improvement of the 400 kV linac electron source of AmPS p 3140 N93-28343
Workshop on scientific applications of short wavelength coherent light sources [DE93-009617] p 3148 N93-28456

LINEAR ARRAYS
Visible spectrum of stable sonoluminescence [AD-A262096] p 3032 N93-28188
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system [AD-A262712] p 3108 N93-28394

LINEAR EQUATIONS
Linear stability analysis in the numerical solution of initial value problems [TW-92-07] p 3118 N93-27916
WAVEPACK: Basic concepts of linear wave propagation [MEMO-1068] p 3041 N93-28077
Proper elimination of latent variables [MEMO-1072] p 3121 N93-28164

LINEAR OPERATORS
Equivalent conditions for the solvability of the infinite-dimensional LQ-problem with unbounded input and output operators [W-9209] p 3121 N93-28138

LINEAR PROGRAMMING
MP-DIT: Mathematical program data interchange tool [MEMO-COSOR-92-31] p 3095 N93-27385
New approaches to linear and nonlinear programming [DE93-010134] p 3103 N93-28214

LINEAR QUADRATIC REGULATOR
Game theoretic synthesis for robust aerospace controllers p 2919 N93-27171
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis [AD-A262151] p 2946 N93-27546
Equivalent conditions for the solvability of the infinite-dimensional LQ-problem with unbounded input and output operators [W-9209] p 3121 N93-28138
Robust control for uncertain structures p 3061 N93-28174

LINEAR SYSTEMS
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model [CWI-NM-R9205] p 3113 N93-27302
On the asymptotic behavior of discrete events systems [ISBN-90-74488-01-3] p 3125 N93-27876
Equivalent conditions for the solvability of the infinite-dimensional LQ-problem with unbounded input and output operators [W-9209] p 3121 N93-28138
Proper elimination of latent variables [MEMO-1072] p 3121 N93-28164

LINEAR TRANSFORMATIONS
Classification of minimal graphs of given face-width on the torus [CWI-BS-R9203] p 3117 N93-27607

LINEARIZATION
Concurrent data objects in quadratic space [CS-9112] p 3101 N93-28066

LINGUISTICS
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1 [PB93-173938] p 3026 N93-27403
Left-corner and head-corner chart parsing [MEMO-INF-92-55] p 3096 N93-27489
The Grammar Workbench: A first step towards Lingware engineering [TR-92-06] p 3100 N93-27902

LIQUEFACTION
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687

LIQUID CHROMATOGRAPHY
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics [PB93-173011] p 3069 N93-27423
Chemical and biological variability in the upper water column [AD-A262207] p 3080 N93-27684

LIQUID COOLING
Lightweight passive microclimate cooling device [AD-A262262] p 3087 N93-28112

LIQUID CRYSTALS
Tailored organometallic polymers [AD-A262446] p 3004 N93-27697
NMR and optical studies of piezoelectric polymers [DE93-010967] p 3006 N93-28361

LIQUID FLOW
Mixing and transient interface condensation of a liquid hydrogen tank [NASA-TM-106201] p 3042 N93-28252

LIQUID HELIUM 2
Superfluid helium needs and resupply on Space Station p 2968 N93-27802

LIQUID HYDROGEN
The development of hydrogen sensor technology at NASA Lewis Research Center [NASA-TM-106141] p 3045 N93-27021
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank [NASA-TM-106018] p 3039 N93-27155
Cryogenic transfer module for geosynchronous orbit p 2920 N93-27176
Mixing and transient interface condensation of a liquid hydrogen tank [NASA-TM-106201] p 3042 N93-28252

LIQUID NITROGEN
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank [NASA-TM-106018] p 3039 N93-27155
Orbital storage and supply of subcritical liquid nitrogen p 2968 N93-27801

LIQUID OXYGEN
Cryogenic transfer module for geosynchronous orbit p 2920 N93-27176

LIQUID PHASES
Recovery and separation of precious metals from space p 3001 N93-26686

LIQUID PROPELLANT ROCKET ENGINES
Rocket engine numerical simulator p 2981 N93-26962
Study of basic physical processes in liquid and solid rocket propulsion [NASA-CR-192550] p 2986 N93-27146

LIQUID ROCKET PROPELLANTS
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank [NASA-TM-106018] p 3039 N93-27155
Cryogenic transfer module for geosynchronous orbit p 2920 N93-27176
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices [NASA-CR-191059-VOL-2] p 2986 N93-27532
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative [NASA-CR-191058-VOL-1] p 2987 N93-27535
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine [AD-A261965] p 3008 N93-27666
Space Station propulsion system p 2969 N93-27817
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025
Progress in optical diagnostic development for the electro-thermal chemical program [DE93-009452] p 2997 N93-28452

LIQUID SLOSHING
The Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-27893
Middeck 0-gravity dynamics experiment: Fluid slosh experiments p 3010 N93-27895

LIQUID-SOLID INTERFACES
Condensed matter physics at surfaces and interfaces of solids [DE93-005648] p 3154 N93-28346

LIQUID-VAPOR INTERFACES
Mixing and transient interface condensation of a liquid hydrogen tank [NASA-TM-106201] p 3042 N93-28252

LITHIUM
JPL nuclear electric propulsion task p 2983 N93-26980
Application of quality function deployment to the design of a lithium battery [DE93-008346] p 3033 N93-28459

LITHIUM ISOTOPES
Laser cooling of a stored ion beam: A first step towards crystalline beams [DE93-010301] p 3048 N93-28333

LITHOGRAPHY
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
Solid state research [AD-A262273] p 3154 N93-28237

Solid state research
[AD-A262874] p 3154 N93-28247

LITHOLOGY
Information extraction and integration in mineral exploration p 3167 N93-28072

LOAD TESTS
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879

LOADS (FORCES)
Interaction between ice and propeller
[VTT-TIED-1281] p 3051 N93-27832
Dynamic analysis of spur gears using computer program DANST
[NASA-TM-106211] p 3052 N93-28050
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311

LOCAL AREA NETWORKS
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
Flexible control techniques for a lunar base p 3111 N93-27981

LOG PERIODIC ANTENNAS
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017

LOGARITHMS
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586

LOGIC PROGRAMMING
A theory of first-order built-in's of PROLOG
[CWI-CS-R9216] p 3093 N93-27255
Transition systems and dynamic semantics
[CWI-CS-R9217] p 3094 N93-27256
A comparison of OBJ3 and ASF+SDF
[CWI-CS-R9223] p 3094 N93-27363
Comparative transition system semantics
[CWI-CS-R9222] p 3095 N93-27389
A predicate transformer for unification
[CWI-CS-R9227] p 3096 N93-27391
Constraints logic programming in knowledge-based planning domains
[AD-A262958] p 3104 N93-28291

LONG DURATION EXPOSURE FACILITY
Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077
LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium
[NASA-CP-3194-PT-3] p 3219 N93-28254
LDEF materials overview p 2997 N93-28255
Oxygen isotopes implanted in the LDEF spacecraft p 2997 N93-28256
Silazine to silica p 2997 N93-28257
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262
LDEF fiber-composite materials characterization p 2992 N93-28264
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel p 2992 N93-28265
Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268
Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269
Spectral infrared hemispherical reflectance measurements for LDEF tray clamps p 3149 N93-28270
Surface characterization of selected LDEF tray clamps p 3001 N93-28271
Contamination on LDEF: Sources, distribution, and history p 2998 N93-28272
Optical characterization of LDEF contaminant film p 3149 N93-28274
Evaluation of seals, lubricants, and adhesives used on LDEF p 3007 N93-28275
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
LDEF thermal control coatings post-flight analysis p 3008 N93-28278
Selected results for LDEF thermal control coatings p 3008 N93-28279
Fluorescence measurements of the thermal control experiments coatings on LDEF S0069 and A0114 p 3008 N93-28280
Atomic oxygen effects on LDEF experiment AO171 p 3138 N93-28281
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF p 3008 N93-28282
Second LDEF Post-Retrieval Symposium interim results of experiment A0034 p 3008 N93-28283
The interaction of atomic oxygen with copper: An XPS, AES, XRD, optical transmission, and stylus profilometry study p 3149 N93-28284
LDEF materials data analysis: Representative examples p 2998 N93-28285
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base p 3168 N93-28286
Data bases for LDEF results p 3168 N93-28287
Long Duration Exposure Facility experiment M0003 deintegration observation data base p 3169 N93-28288

LONG TERM EFFECTS
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Atomic oxygen effects on LDEF experiment AO171 p 3138 N93-28281
The interaction of atomic oxygen with copper: An XPS, AES, XRD, optical transmission, and stylus profilometry study p 3149 N93-28284
LDEF materials data analysis: Representative examples p 2998 N93-28285
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base p 3168 N93-28286
Long Duration Exposure Facility experiment M0003 deintegration observation data base p 3169 N93-28288

LONG WAVE RADIATION
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

LONGITUDINAL CONTROL
New adaptive controllers for aircraft p 2921 N93-27180

LOOK ANGLES (TRACKING)
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera p 2923 N93-27194

LORENTZ FORCE
Magnetic suspension characteristics of electromagnetic actuators p 2960 N93-27561

LORENTZ TRANSFORMATIONS
On inducing finite dimensional physical field representations for massless particles in even dimensions p 3144 N93-27339

LOSS OF COOLANT
Austrian contributions to reactor safety research
[OEFZS-4622] p 3139 N93-28203

LOUDNESS
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272

LOW ALTITUDE
A prediction model for noise from low-altitude military aircraft
[AD-A262494] p 3130 N93-27662

LOW ASPECT RATIO WINGS
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214

LOW CARBON STEELS
Stress corrosion evaluation of HP 9Ni-4Co-0.20C steel
[NASA-TP-3384] p 3000 N93-28071

LOW FREQUENCIES
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

LOW NOISE
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions p 3013 N93-27743
A low-noise 492 GHz SIS waveguide receiver p 3015 N93-27750

LOW SPEED
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447

LOW THRUST PROPULSION
Vertical landing on an asteroid p 2924 N93-27202

LUBRICANTS
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914

LUBRICATING OILS
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Investigation of multiply alkylated cyclopentane synthetic oil and lead naphthenate additive under boundary contact interactions
[ATR-93(8361)-1] p 2995 N93-27602

LUBRICATION
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914
Elastohydrodynamic lubrication of multilayered elastic solids p 3053 N93-28413

LUMINESCENCE
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802

LUMINOSITY
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
The multicomponent structure of bulges p 3187 N93-26800
Luminosities of H alpha emitting regions in a pair of interacting galaxies in the Bootes void p 3188 N93-26812
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834
Removing Malmquist bias from linear regressions p 3122 N93-26872
Emission line gas in early-type galaxies: Kinematics and physical conditions p 3200 N93-26874
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
The ISM in the M82 starburst p 3202 N93-26887
Powering the superwind in NGC 253 p 3203 N93-26893

LUNAR BASED EQUIPMENT
Conceptual study on manned lunar surface site p 2950 N93-28029
Conceptual study of manned lunar surface site p 2951 N93-28031

LUNAR BASES
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Return to the Moon: Lunar robotic science missions p 3211 N93-27958
An engineer/constructor's view of lunar resource development p 3211 N93-27960
An evolution strategy for lunar nuclear surface power p 2988 N93-27963
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964
Fuel cell technology for lunar surface operations p 3067 N93-27965
Electrical power integration for lunar operations p 2988 N93-27966
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
Lunar materials processing system integration p 3021 N93-27972
Options for a lunar base surface architecture p 3214 N93-27974
Engineering design constraints of the lunar surface environment p 3022 N93-27975
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
Flexible control techniques for a lunar base p 3111 N93-27981
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Considerations for lunar colony communications systems p 3030 N93-27983
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984
Lunar base thermal management/power system analysis and design p 3089 N93-27985

Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Conceptual study on manned lunar surface site p 2950 N93-28029
Conceptual study of manned lunar surface site p 2951 N93-28031
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032
Lunar surface experiment system p 2951 N93-28034

LUNAR COMMUNICATION
Considerations for lunar colony communications systems p 3030 N93-27983

LUNAR CONSTRUCTION EQUIPMENT
Intelligent robots for planetary exploration and construction p 3054 N93-27980
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982

LUNAR DUST
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979

LUNAR ENVIRONMENT
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
Flexible control techniques for a lunar base p 3111 N93-27981
LUTE primary mirror study
[NASA-CR-193069] p 3148 N93-28448

LUNAR EXCAVATION EQUIPMENT
Intelligent robots for planetary exploration and construction p 3054 N93-27980

LUNAR EXPLORATION
The challenges and benefits of lunar exploration p 3211 N93-27957
Return to the Moon: Lunar robotic science missions p 3211 N93-27958
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Unmanned lunar surface exploration p 2951 N93-28035
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038
Research on lunar resources development and their utilization p 2952 N93-28039
Lunar surface roving explorer p 2952 N93-28041
Science missions for lunar resources exploration p 2953 N93-28044
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152

LUNAR GEOLOGY
Science missions for lunar resources exploration p 2953 N93-28044

LUNAR LANDING
Metals production p 3214 N93-27970
Moon revolving observation satellites p 2952 N93-28037
Conceptual study of lunar landing modules p 2952 N93-28043

LUNAR LANDING MODULES
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Conceptual study of lunar landing modules p 2952 N93-28043

LUNAR LANDING SITES
Lunar surface experiment system p 2951 N93-28034
Conceptual study of lunar landing modules p 2952 N93-28043

LUNAR LAUNCH
Conceptual study of lunar landing modules p 2952 N93-28043

LUNAR LIMB
Annular Solar Eclipse of 10 May 1994
[NASA-RP-1301] p 3169 N93-27057

LUNAR MAPS
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689
Moon revolving observation satellite p 2952 N93-28038

LUNAR MINING
Lunar mining of oxygen using fluorine p 2997 N93-26680
Energy for lunar resource exploitation p 3212 N93-27961
Electrical power integration for lunar operations p 2988 N93-27966

LUNAR OBSERVATORIES
Characterization of lunar surface materials for use in construction p 3211 N93-27959

LUNAR PROBES
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Conceptual study of the moon revolving observation satellites p 2952 N93-28036

LUNAR RESOURCES
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Experimental study of the electrolysis of silicate melts p 2997 N93-26679
Melt-processing of lunar ceramics p 3007 N93-26685
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687
Abundance of He-3 and other solar-wind-derived volatiles in lunar soil p 3209 N93-26692
In-situ materials processing systems and bioregenerative life support systems interrelationships p 2992 N93-26695
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Return to the Moon: Lunar robotic science missions p 3211 N93-27958
An engineer/constructor's view of lunar resource development p 3211 N93-27960
Energy for lunar resource exploitation p 3212 N93-27961
Electrical power integration for lunar operations p 2988 N93-27966
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
Magnetic beneficiation of lunar soils p 3213 N93-27968
Metals production p 3214 N93-27970
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
Lunar materials processing system integration p 3021 N93-27972
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Options for a lunar base surface architecture p 3214 N93-27974
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Research on lunar resources development and their utilization p 2952 N93-28039

LUNAR ROCKS
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Lareg area solar cells from lunar materials p 3066 N93-26688
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
Lunar materials processing system integration p 3021 N93-27972
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984

LUNAR ROVING VEHICLES
Propulsion needs for lunar/Mars missions p 2967 N93-27798
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032
Unmanned lunar surface exploration p 2951 N93-28035
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Conceptual study of lunar landing modules p 2952 N93-28043
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152

LUNAR SATELLITES
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038

LUNAR SHADOW
Annular Solar Eclipse of 10 May 1994
[NASA-RP-1301] p 3169 N93-27057

LUNAR SHELTERS
Conceptual study on manned lunar surface site p 2950 N93-28029

LUNAR SOIL
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-26675
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Lareg area solar cells from lunar materials p 3066 N93-26688
Development of a material processing plant for lunar soil p 3021 N93-26694
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
Magnetic beneficiation of lunar soils p 3213 N93-27968
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-27969
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
Lunar materials processing system integration p 3021 N93-27972
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Research on lunar resources development and their utilization p 2952 N93-28039
Science missions for lunar resources exploration p 2953 N93-28044

LUNAR SPACECRAFT
Lunar NTR vehicle design and operations study p 2978 N93-26922
Propulsion needs for lunar/Mars missions p 2967 N93-27798
Conceptual study of manned lunar transportation system p 2951 N93-28030

LUNAR SURFACE
Characterization of lunar surface materials for use in construction p 3211 N93-27959
An evolution strategy for lunar nuclear surface power p 2988 N93-27963
Engineering design constraints of the lunar surface environment p 3022 N93-27975
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152

LUNGS
Evaluation of NO(x)-induced toxicity
[AD-A261034] p 3084 N93-28122

LYMAN ALPHA RADIATION
Distant radio galaxies in the near IR p 3177 N93-26742
Searching for Lyman alpha emission from a possible Zel'dovich pancake p 3179 N93-26755
Metal abundances at z = 3.4 p 3179 N93-26757
On the evolution of Lyman alpha clouds based upon the Minihalo model p 3181 N93-26765
The two-point correlation function of randomly distributed Lyman alpha clouds p 3181 N93-26767
Absorption spectra of Q 0000-263 and Q 1442+101 p 3182 N93-26773
Pruning the Lyman alpha forest of Q1331+170 p 3182 N93-26774
The Lyman alpha emission of starburst galaxies p 3184 N93-26784
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
The Lyman alpha forest of the high-z quasar 0000-263 p 3203 N93-26890
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079

LYMAN SPECTRA
Can quasars photoionize the intergalactic medium at high redshift? p 3179 N93-26756
HST/FOS spectra of PG 1351+64: An intrinsic absorber at low redshift p 3180 N93-26761
Low redshift Lyman alpha absorption lines and the dark matter halos of disk galaxies p 3180 N93-26762
Neutral hydrogen at the present epoch: A constraint on the evolution of high redshift systems p 3181 N93-26763
Testing the pressure-confined Ly alpha cloud model p 3181 N93-26764
Intensity correlation of ionizing background at high redshifts p 3181 N93-26768
Pruning the Lyman alpha forest of Q1331+170 p 3182 N93-26774
A re-analysis of the spectrum of 2206-199 p 3182 N93-26775

M

MACH NUMBER
Analysis of fluctuating static pressure measurements in a large high Reynolds number transonic cryogenic wind tunnel
[NASA-TM-108722] p 2947 N93-27142
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0 p 2927 N93-27221
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Dynamic airfoil stall investigations p 2935 N93-27453

MACHINE LEARNING
An expert system shell for inferring vegetation characteristics: Changes to the historical cover type database (Task F)
[NASA-CR-193067] p 3063 N93-27072
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460

MACHINING
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754

MAFFEI GALAXIES
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811

MAGELLANIC CLOUDS
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Far-infrared line images of dwarf galaxies p 3186 N93-26797
Tidal interactions and the formation of Magellanic spiral galaxies p 3190 N93-26821

MAGNESIUM
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913

MAGNETIC BEARINGS
Magnetic Suspension Technology Workshop
[NASA-CP-3202] p 2959 N93-27554
Magnetic bearings: Fifty years of progress p 2959 N93-27556
Magnetic bearing turbomachinery case histories and applications for space related equipment p 2959 N93-27557
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
Design considerations for ultra-precision magnetic bearing supported slides p 2960 N93-27562
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564
Design and test of a magnetic thrust bearing p 2961 N93-27567
A conventional point of view on active magnetic bearings p 2961 N93-27568
Magnetic bearings for a high-performance optical disk buffer p 2961 N93-27569
Active magnetic bearings applied to industrial compressors p 2961 N93-27570
Practical limits to the performance of magnetic bearings: Peak force, slew rate, and displacement sensitivity p 2961 N93-27571
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573
High efficiency magnetic bearings p 2962 N93-27574
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578

MAGNETIC CIRCUITS
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578
Evaluation of actuators for the SDOF and MDOF active microgravity isolation systems p 3057 N93-27595

MAGNETIC COOLING
A broadband THz receiver for low background space applications p 3020 N93-27782

MAGNETIC FIELDS
Analysis of magnetometer data/wave signals in the Earth's magnetosphere
[NASA-CR-193169] p 3072 N93-27154
Wave packet motion in harmonic potential and computer visualization p 3141 N93-27315
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
Magnetic beneficiation of lunar soils p 3213 N93-27968
Zeeman spin splitting frequency renormalization in disordered interacting electronic systems
[SSCL-PREPRINT-755] p 3157 N93-28315
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
High power density, thin magnetic DC septa for AmPS p 3140 N93-28342

MAGNETIC FILMS
Magnetic thin films and nanostructures: Anisotropy, microstructure, and their inter-relationship
[DE93-007714] p 3002 N93-26611

MAGNETIC FLUX
Magnetic suspension actuator concepts and applications p 2959 N93-27555
High efficiency magnetic bearings p 2962 N93-27574
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344

MAGNETIC LEVITATION VEHICLES
Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
Comparison of major parameters in electrodynamic and electromagnetic levitation transport systems
[PB93-154755] p 3051 N93-27412
Aerodynamic forces on maglev vehicles
[PB93-154813] p 2930 N93-27413
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928

MAGNETIC MEASUREMENT
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234

MAGNETIC MOMENTS
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487

MAGNETIC PROPERTIES
Magnetic properties and critical behavior of the conductivity near the M-I transition
[DE93-011437] p 3032 N93-28217
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344

MAGNETIC RESONANCE
EVA Glove Research Team
[NASA-CR-193014] p 3086 N93-27847
A feasibility study of hand kinematics for EVA analysis using magnetic resonance imaging p 3086 N93-27848

MAGNETIC SUSPENSION
Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
Comparison of major parameters in electrodynamic and electromagnetic levitation transport systems
[PB93-154755] p 3051 N93-27412
Magnetic Suspension Technology Workshop
[NASA-CP-3202] p 2959 N93-27554
Magnetic suspension actuator concepts and applications p 2959 N93-27555
Magnetic bearings: Fifty years of progress p 2959 N93-27556
Magnetic bearing turbomachinery case histories and applications for space related equipment p 2959 N93-27557
Six degrees of freedom vibration isolation using electromagnetic suspension p 2960 N93-27559
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
Magnetic suspension characteristics of electromagnetic actuators p 2960 N93-27561
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
Design and test of a magnetic thrust bearing p 2961 N93-27567
Practical limits to the performance of magnetic bearings: Peak force, slew rate, and displacement sensitivity p 2961 N93-27571
Advanced actuators for the control of large space structures p 2962 N93-27572
An AC-electromagnetic bearing for flywheel energy storage in space p 2962 N93-27573
Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts p 2962 N93-27575
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928

MAGNETIC VARIATIONS
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308

MAGNETIZATION
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE93-009698] p 2994 N93-27487

MAGNETOHYDRODYNAMIC FLOW
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144
Modelling of plasmaspheric flows p 3150 N93-28412

MAGNETOHYDRODYNAMIC GENERATORS
MHD can clean up the environment
[DE93-008015] p 3070 N93-27617
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332

MAGNETOHYDRODYNAMIC STABILITY
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349

MAGNETOHYDRODYNAMIC WAVES
Static galactic halo and galactic wind p 3198 N93-26862

MAGNETOHYDRODYNAMICS
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332

MAGNETOMECHANICS (PHYSICS)
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234

MAGNETOMETERS
Analysis of magnetometer data/wave signals in the Earth's magnetosphere
[NASA-CR-193169] p 3072 N93-27154
TechSAT attitude control p 2924 N93-27197
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834

MAGNETOPLASMADYNAMICS
NEP technology: FY 1992 milestones (NASA LeRC) p 2983 N93-26977
JPL nuclear electric propulsion task p 2983 N93-26980
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
Thruster models for NEP system analysis p 2984 N93-26988

MAGNETORESISTIVITY
Magnetic properties and critical behavior of the conductivity near the M-I transition
[DE93-011437] p 3032 N93-28217

MAGNETOSPHERE-IONOSPHERE COUPLING
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380

MAGNETRON SPUTTERING
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626

MAGNITUDE
Ways to improve your correlation functions p 3172 N93-26712

MAINTAINABILITY
Follow-on operational test and evaluation of the NAVSTAR global positioning system air integration/installation program
[AD-A263067] p 2941 N93-27925
A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090

MAINTENANCE
A globally gated polling system with server interruptions, and applications to the repairman problem
[CWI-BS-R9208] p 3127 N93-27309
A general model for maintenance of complex systems
[CWI-BS-R9201] p 3124 N93-27393

MAN ENVIRONMENT INTERACTIONS
Seventh Annual Information Transfer Meeting. Our Changing Coastal Environment: Research on Natural Processes and Man's Influence
[PB93-173813] p 3068 N93-27401

MAN MACHINE SYSTEMS
Man-systems distributed system for Space Station Freedom p 2966 N93-27788
EVA and telerobot interaction p 2967 N93-27792
Man-systems integration and the man-machine interface p 2967 N93-27795

Agent-independent planning p 2970 N93-27822
FTS evolution p 2970 N93-27824
Extravehicular activity technology discipline p 2972 N93-27859
Manned systems technology discipline p 2972 N93-27860

MAN-COMPUTER INTERFACE
Man-systems distributed system for Space Station Freedom p 2966 N93-27788
EVA/manned systems p 2966 N93-27789
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794
Man-systems integration and the man-machine interface p 2967 N93-27795
The second Garnet compendium: Collected papers 1990-1992
[AD-A262696] p 3102 N93-28118
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444

MANAGEMENT METHODS
NTP comparison process p 2978 N93-26926
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
Lotosphere, an attempt towards a design culture
[MEMO-INF-92-56] p 3163 N93-27490
Application of quality function deployment to the design of a lithium battery
[DE93-008346] p 3033 N93-28459

MANAGEMENT PLANNING
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
Local search in physical distribution management
[MEMO-COSOR-92-30] p 3163 N93-27384
An engineer/constructor's view of lunar resource development p 3211 N93-27960
Repository-Based Software Engineering Program: Working Program Management Plan
[NASA-CR-193113] p 3104 N93-28319
Productivity increases in science
[DE93-009473] p 3109 N93-28453

MANAGEMENT SYSTEMS
SNTP propellant management system p 2979 N93-26937
Power management and distribution technology p 2983 N93-26978
Integrated Station Executive requirements and systems design approach
[NASA-CR-185708] p 2958 N93-27143
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
Lotosphere, an attempt towards a design culture
[MEMO-INF-92-56] p 3163 N93-27490
Technology for Space Station evolution: The data management system p 2963 N93-27705
Embedded multiprocessor technology for VHSIC insertion p 2964 N93-27713
Fluid Management System (FMS) fluid systems overview p 2967 N93-27796
Automation of Space Station module power management and distribution system p 2969 N93-27816
Advanced interface heat exchangers for the Space Station main thermal bus p 2971 N93-27844
Data management system technology discipline p 2972 N93-27857
Fluid management system technology discipline p 2973 N93-27861

MANEUVERABILITY
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
Dynamic airfoil stall investigations p 2935 N93-27453

MANEUVERS
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206

MANGANESE OXIDES
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938

MANIFOLDS (MATHEMATICS)
Symmetries and motions in manifolds
[NIKHEF-H/92-08] p 3128 N93-27510

MANIPULATORS
Flight telerobotic servicer p 2970 N93-27820
Extended task space control for robotic manipulators
[NASA-CASE-NPO-18902-1-CU] p 3052 N93-28129
Parallel manipulators. Part 5: Determination of the workspace for a constant orientation
[INRIA-RR-1645] p 3053 N93-28439

MANNED MARS MISSIONS
Power management and distribution technology p 2983 N93-26978
Radiator technology p 2983 N93-26979
JPL nuclear electric propulsion task p 2983 N93-26980
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985

MANNED SPACE FLIGHT
Technology for Space Station Evolution. Volume 3: EVA/Manned Systems/Fluid Management System
[NASA-TM-108726] p 2966 N93-27786
Evolving EVA system capability for the evolving Space Station Freedom requirements p 2966 N93-27791
Simplified Aid For Crew Rescue (SAFR) p 2967 N93-27793
Manned systems technology discipline p 2972 N93-27860

MANNED SPACECRAFT
EVA/manned systems p 2966 N93-27789
Manned systems technology discipline p 2972 N93-27860
Manned engineering test satellites p 2948 N93-28016
Conceptual study on manned engineering test satellites p 2949 N93-28017
Conceptual study of manned lunar transportation system p 2951 N93-28030
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032

MANUALS
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182

MANUFACTURING
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
Coherent systems in the terahertz frequency range: Elements, operation, and examples p 3011 N93-27727
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381
Application of quality function deployment to the design of a lithium battery
[DE93-008346] p 3033 N93-28459

MANY BODY PROBLEM
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
Galaxy tracers in N-body simulations p 3176 N93-26732
The large-scale morphology of IRAS galaxies p 3176 N93-26733
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Enrichment and heating of the intracluster medium by ejection from galaxies p 3180 N93-26758
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353

MAP MATCHING GUIDANCE
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178

MAPPING
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179

MAPS
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179
Desktop publishing in remote sensing
[BCRS-92-15] p 3063 N93-27702
A representation result for nonlinear filter maps on a white noise framework
[MEMO-1062] p 3129 N93-28013

MARINE BIOLOGY
Chemical and biological variability in the upper water column
[AD-A262207] p 3080 N93-27684
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924

MARINE METEOROLOGY
Mariners weather log, volume 37, number 1, winter 1993
[PB93-174308] p 3077 N93-27516
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5
[AD-A262117] p 3079 N93-28183

MARINE PROPULSION
Interaction between ice and propeller
[VTT-TIED-1281] p 3051 N93-27832

MARITIME SATELLITES
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
Mobile communication via satellite towards the year 2000 p 3023 N93-26646

MARKARIAN GALAXIES
The nature of faint emission-line galaxies p 3173 N93-26716
The environments of Seyfert and Markarian galaxies p 3185 N93-26789
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875

MARKET RESEARCH
Description of the global petroleum supply and demand outlook updated for the 1993 edition of the GRI baseline projection of US energy supply and demand, December 1992
[PB93-165744] p 3008 N93-26633
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414

MARKOV CHAINS
On the asymptotic behavior of discrete events systems
[ISBN-90-74488-01-3] p 3125 N93-27876

MARKOV PROCESSES
Reliability analysis of complex models using sure bounds
[NASA-CR-191445] p 3091 N93-26897
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling
[MEME-COSOR-92-08] p 3124 N93-27277
Upper and lower bounds for the waiting time in the symmetric shortest queue system
[MEMO-COSOR-92-09] p 3127 N93-27278
A general model for maintenance of complex systems
[CWI-BS-R9201] p 3124 N93-27393
The compensation approach applied to a 2 by 2 switch
[MEMO-COSOR-92-28] p 3115 N93-27397
A recurrence type characterization of mu-exponential ergodicity for Markov processes
[TW-92-03] p 3125 N93-27905
A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090
Restoration of incomplete contour images using Markov random fields
[INRIA-RR-1688] p 3126 N93-28445

MARS (PLANET)
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
Mars exploration program p 2976 N93-26909
The challenges and benefits of lunar exploration p 3211 N93-27957
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-27969
Options for a lunar base surface architecture p 3214 N93-27974
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Detail design of Mars transfer orbit p 2953 N93-28046

MARS ENVIRONMENT
An integrated database with system optimization and design features p 3168 N93-26697

MARS EXCURSION MODULE
Propulsion needs for lunar/Mars missions p 2967 N93-27798

MARS LANDING
Mars exploration mission p 2953 N93-28045
Outline of Mars explorer system p 2953 N93-28048

MARS PROBES
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Mars exploration mission p 2953 N93-28045
Mars revolving observation satellite p 2953 N93-28047
Outline of Mars explorer system p 2953 N93-28048
MARS SAMPLE RETURN MISSIONS
Outline of Mars explorer system p 2953 N93-28048
MARS SATELLITES
Composition of near-Earth asteroids p 3205 N93-26690
MARS SURFACE
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604
Outline of Mars explorer system p 2953 N93-28048
MARS SURFACE SAMPLES
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604
Outline of Mars explorer system p 2953 N93-28048
MARTENSITIC TRANSFORMATION
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371
MASERS
Infrared coronal emission lines and the possibility of their maser emission in Seyfert nuclei p 3196 N93-26853
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451
MASS DISTRIBUTION
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Galaxy tracers in N-body simulations p 3176 N93-26732
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889
MASS FLOW
CFD mixing analysis of axially opposed rows of jets injected into confined crossflow
[NASA-TM-106179] p 2944 N93-27128
By-passing of heat exchangers in gas turbines p 2922 N93-27189
MASS SPECTRA
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Mass spectra of the particle-antiparticle system with a Dirac oscillator interaction p 3146 N93-27351
MASS SPECTROMETERS
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
MASS SPECTROSCOPY
Accelerator Mass Spectrometry facility (AMS)
[AD-A262458] p 3134 N93-27829
MASS TRANSFER
Solid state research
[AD-A262874] p 3154 N93-28247
MASSIVE STARS
Heavy element abundances and massive star formation p 3172 N93-26709
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
Far-infrared line images of dwarf galaxies p 3186 N93-26797
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
The ring around SN1987A p 3199 N93-26868
MASSIVELY PARALLEL PROCESSORS
USRA/RIACS
[NASA-CR-193216] p 3092 N93-27224
Massively parallel searching for better algorithms
[DE93-009501] p 3107 N93-27623
A programming tool for detailed analysis of FORTRAN operation counts
[DE93-009606] p 3105 N93-28455
MATCHED FILTERS
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
MATCHING
Associative matching for linear terms
[CWI-CS-R9224] p 3094 N93-27377
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441
MATERIALS
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398
MATERIALS HANDLING
Lunar materials processing system integration p 3021 N93-27972
MATERIALS RECOVERY
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332
MATERIALS SCIENCE
Materials And Processes Technical Information System (MAPTIS) LDEF materials data base p 3168 N93-28286
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
MATERIALS TESTS
MSFC nuclear thermal propulsion technology program p 2979 N93-26932
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398
MATHEMATICAL LOGIC
Provably recursive programs
[CWI-CS-R9212] p 3097 N93-27500
A resolution method for some systems of modal logic
[ISBN-90-9005125-2] p 3119 N93-27940
Dynamic modal predicate logic
[CWI-CS-R9237] p 3101 N93-28001
The LAZYRMS: Avoiding work in the ATMS
[RUU-CS-92-20] p 3101 N93-28062
MATHEMATICAL MODELS
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Fiber shape effects on metal matrix composite behavior
[NASA-TM-106067] p 2989 N93-26704
Testing the pressure-confined Ly alpha cloud model p 3181 N93-26764
Gas distribution and starbursts in shell galaxies p 3183 N93-26780
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem p 3188 N93-26810
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
Description of alpha-nucleus interaction cross sections for cosmic ray shielding studies
[NASA-TP-3285] p 3138 N93-26905
Enabler 1 and 2 engine system design modeling and comparisons p 2978 N93-26924
Nuclear thermal propulsion technology overview p 2978 N93-26927
NTR plume modeling p 2978 N93-26929
Nuclear gas core propulsion research program p 2979 N93-26933
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942
Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Particle bed reactor modeling p 2980 N93-26954
Rocketdyne/Westinghouse nuclear thermal rocket engine modeling p 2980 N93-26955
Computational modeling of nuclear thermal rockets p 2980 N93-26956
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
SAFSIM overview p 2981 N93-26959
The ILS mathematical modeling study of the Runway 10 ILS Localizer at Luis Munoz Marin International Airport, San Juan, Puerto Rico
[DOT/FAA/CT-TN93/10] p 2941 N93-27017
Composite micromechanical modeling using the boundary element method
[NASA-TM-106127] p 3056 N93-27030
HZEFRG1: An energy-dependent semiempirical nuclear fragmentation model
[NASA-TP-3310] p 3138 N93-27031
Contact stress analysis of spiral bevel gears using nonlinear finite element static analysis
[NASA-TM-106176] p 3049 N93-27037
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
Robust controller design for flexible structures using normalized coprime factor plant descriptions
[NASA-TP-3325] p 2958 N93-27083
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
1991 NASA Life Support Systems Analysis workshop
[NASA-CR-4466] p 3085 N93-27100
1992 NASA Life Support Systems Analysis workshop
[NASA-CR-4467] p 3085 N93-27101
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
Physics of solar activity
[NASA-CR-193139] p 3217 N93-27114
Research summary
[NASA-CR-193082] p 3129 N93-27127
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
[NASA-CR-192988] p 3068 N93-27163
Regional tectonic analysis of Venus equatorial highlands and comparison with Earth-based Magellan radar images
[NASA-CR-192996] p 3210 N93-27164
Regression rate mechanism in a solid fuel ramjet p 2922 N93-27185
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase p 2922 N93-27186
Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface p 2928 N93-27222
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
Introduction to a behavioral approach of continuous-time systems, part 2
[MEMO-COSOR-92-17] p 3112 N93-27245
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
An invitation to structured (meta)population models
[CWI-AM-R9113] p 3124 N93-27294
Mathematics as technology: Mathematical engineering
[CWI-AM-R9202] p 3113 N93-27296
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Numerical modeling of runback water on ice protected aircraft surfaces p 2933 N93-27438
Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1043] p 3115 N93-27469
On Hamilton-connectedness of Cayley graphs p 3115 N93-27470
Toughness and the cycle structure of graphs p 3115 N93-27472
The Hopping Lemma p 3115 N93-27473
Cycles containing all vertices of maximum degree p 3115 N93-27474
Long paths and cycles in tough graphs p 3115 N93-27475
The complete closure of a graph p 3115 N93-27476
Generalized closures of graphs p 3116 N93-27477
Two problems related to results of Chvatal-Erdos p 3116 N93-27478

Concerning the circumference of certain families of graphs p 3116 N93-27479
Ore-type conditions for cycles through specified vertices p 3116 N93-27480
Hamilton cycles in path-tough graphs p 3116 N93-27481
Cubic graphs containing k vertex-disjoint subgraphs of given cyclomatic number p 3116 N93-27482
International survey of industrial applications of formal methods. Volume 1: Purpose, approach, analysis, and conclusions
[PB93-178556] p 3010 N93-27517
International survey of industrial applications of formal methods. Volume 2: Case studies
[PB93-178564] p 3010 N93-27518
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560
Magnetic suspension characteristics of electromagnetic actuators p 2960 N93-27561
Design and test of a magnetic thrust bearing p 2961 N93-27567
A conventional point of view on active magnetic bearings p 2961 N93-27568
Active magnetic bearings applied to industrial compressors p 2961 N93-27570
Practical limits to the performance of magnetic bearings: Peak force, slew rate, and displacement sensitivity p 2961 N93-27571
A prediction model for noise from low-altitude military aircraft
[AD-A262494] p 3130 N93-27662
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724
Noise in Josepson effect mixers and the RSJ model p 3016 N93-27762
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781
The identification of analytical device models
[ISBN-90-6275-764-2/CIP] p 3100 N93-27874
Finite element model and identification procedure p 3058 N93-27890
A stochastic approach to robust broadband structural control p 3058 N93-27892
The middeck active control experiment: Gravity and suspension effects p 3010 N93-27897
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932
The use of satellites in gravity field determination and model adjustment
[ISBN-90-6275-802-9/CIP] p 2973 N93-27946
Rectenna thermal model development p 3022 N93-27986
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
A representation result for nonlinear filter maps on a white noise framework
[MEMO-1062] p 3129 N93-28013
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137
Active impedance matching of complex structural systems p 3060 N93-28169
Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-28171
Cost averaging techniques for robust control of flexible structural systems p 3061 N93-28175
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
Semantic models for distributed data base management. Part 1: Development of a metamodel for fragmentation
[REPT-92-33] p 3168 N93-28390
Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410
Effect of extended tooth contact on the modeling of spur gear transmissions
[NASA-TM-106174] p 3052 N93-28411
Modelling of plasmaspheric flows p 3150 N93-28412
Elastohydrodynamic lubrication of multilayered elastic solids p 3053 N93-28413
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440
Robust and fast computation of edge characteristics in image sequences
[INRIA-RR-1689] p 3105 N93-28446

MATHEMATICAL PROGRAMMING
Preprocessing and probing techniques for mixed integer programming problems
[MEMO-COSOR-92-26] p 3093 N93-27253
MP-DIT: Mathematical program data interchange tool
[MEMO-COSOR-92-31] p 3095 N93-27385

MATHEMATICS
Mathematics as technology: Mathematical engineering
[CWI-AM-R9202] p 3113 N93-27296

MATRICES (MATHEMATICS)
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
On the treewidth and pathwidth of permutation graphs
[RUU-CS-92-13] p 3113 N93-27305
A tourist guide through treewidth
[RUU-CS-92-12] p 3114 N93-27370
Extended pure Yang Mills gauge theories with scalar and tensor gauge fields
[SSCL-PREPRINT-769] p 3156 N93-27583
Massively parallel searching for better algorithms
[DE93-009501] p 3107 N93-27623
Linear stability analysis in the numerical solution of initial value problems
[TW-92-07] p 3118 N93-27916
Two counterexamples related to the Kreiss matrix theorem
[TW-92-08] p 3118 N93-27917
The improvement of hadronic matrix elements in lattice QCD
[SSCL-PREPRINT-737] p 3157 N93-28162
Final state interactions from Euclidean Correlation Functions
[SSCL-PREPRINT-742] p 3122 N93-28196
Sparse matrix algorithms on distributed memory multiprocessors
[DE93-009368] p 3103 N93-28231

MATRIX MATERIALS
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
A new class of high strength molding resins, phase 1
[AD-A262691] p 3005 N93-28117

MATRIX METHODS
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088

MATRIX THEORY
Two counterexamples related to the Kreiss matrix theorem
[TW-92-08] p 3118 N93-27917

MAXIMA
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
Cycles containing all vertices of maximum degree p 3115 N93-27474
Concerning the circumference of certain families of graphs p 3116 N93-27479

MAXIMUM LIKELIHOOD ESTIMATES
An analytical solution to the consistency problem for the Littlewood model in software reliability
[CWI-BS-R9129] p 3096 N93-27392
Filtering, statistical signal processing and variational problems
[AD-A262276] p 3028 N93-28238

MAXWELL EQUATION
A constitutive model for the forces of a magnetic bearing including eddy currents p 2960 N93-27560

MEAN FREE PATH
The two-point correlation function of randomly distributed Lyman alpha clouds p 3181 N93-26767

MEAN SQUARE VALUES
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
A comparison of variable selection criteria for multiple linear regression: A second simulation study
[AD-A262512] p 3125 N93-27664
Adaptive filtering methods: On methods to use a priori information in order to reduce complexity while maintaining convergence properties
[ISBN-90-9005143-0] p 3121 N93-28109

MEASUREMENT
Ways to improve your correlation functions p 3172 N93-26712

MEASURING INSTRUMENTS
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943
A system for measurement and control of weld pool geometry in automatic arc welding
[ETN-93-93154] p 3050 N93-27380
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
Fiber-optic shock position sensor
[DE93-009607] p 3045 N93-27625

MECHANICAL DEVICES
An apparatus for gripping test specimens
[NASA-CASE-LEW-15345-2] p 3052 N93-28127

MECHANICAL MEASUREMENT
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080

MECHANICAL OSCILLATORS
Quantum non-demolition measurements and generalized states at thermal equilibrium
[SSCL-PREPRINT-743] p 3158 N93-28386

MECHANICAL PROPERTIES
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877
Material analysis of austempered ductile iron
[AD-A261953] p 3000 N93-27921
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266
Evaluation of seals, lubricants, and adhesives used on LDEF p 3007 N93-28275
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354

MEDICAL EQUIPMENT
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291

MEDICAL SCIENCE
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652

MEDITERRANEAN SEA
BETELGUEUSE '90 campaign
[PREPRINT-751] p 3064 N93-27942
BOOTES '90 campaign
[PREPRINT-768] p 3064 N93-27943

MELT SPINNING
Melt-processing of lunar ceramics p 3007 N93-26685
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877

MELTING
Experimental study of the electrolysis of silicate melts p 2997 N93-26679

MELTING POINTS
High flux film and transition boiling
[DE93-010917] p 3157 N93-28350

MEMBRANE STRUCTURES
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752

MEMBRANES
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382

MEMORY
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103

Analysis of neural systems involved in modulation of memory storage
[AD-A262418] p 3084 N93-27654

MEMORY (COMPUTERS)
A single-transistor memory cell and sense amplifier for a gallium arsenide dynamic random access memory
[AD-A261975] p 3153 N93-27953
Sparse matrix algorithms on distributed memory multiprocessors
[DE93-009368] p 3103 N93-28231

MERCURY (METAL)
Cosmology with liquid mirror telescopes
p 3171 N93-26708

MESOMETEOROLOGY
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666

MESONS
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
B(sub c) decays
[SSCL-PREPRINT-774] p 3132 N93-27638
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097
A lattice computation of the decay constant of the B-meson
[SSCL-PREPRINT-747] p 3135 N93-28198
Hadron structure on the lattice
[SSCL-PREPRINT-754] p 3157 N93-28211
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353

MESOSCALE PHENOMENA
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
An evaluation of satellite-derived humidity and its relationship to convective development
[NASA-CR-193077] p 3077 N93-27262
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611
Sea breeze simulation with a static profile of the eddy viscosity
[FOA-B-40415-4.5] p 3078 N93-27831
Mesoscale and large-scale variability in California current system and its interaction with both California current and California undercurrent flows
[AD-A262195] p 3080 N93-27867
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924

MESSAGE PROCESSING
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007
A design and realization exercise of a mini message transfer system
[MEMO-INF-92-51] p 3095 N93-27386

METABOLISM
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977

METAL BONDING
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667

METAL COATINGS
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052

METAL COMBUSTION
Aerospace applications of metal combustion
p 2920 N93-27175

METAL FATIGUE
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force
p 2926 N93-27210
Fatigue in single crystal nickel superalloys
[AD-A262126] p 2999 N93-27674

METAL FIBERS
Development and evaluation of a cleanable high efficiency steel filter
[DE93-008024] p 3070 N93-28419

METAL FILMS
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437

METAL FLUORIDES
High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294

METAL HALIDES
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052

METAL IONS
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301

METAL MATRIX COMPOSITES
An overview of elevated temperature damage mechanisms and fatigue behavior of a unidirectional SCS-6/Ti-15-3 composite
[NASA-TM-106131] p 2989 N93-26702
Fiber shape effects on metal matrix composite behavior
[NASA-TM-106067] p 2989 N93-26704
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877
Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269

METAL OXIDE SEMICONDUCTORS
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871

METAL PLATES
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253

METAL SURFACES
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
Oxygen isotopes implanted in the LDEF spacecraft
p 2997 N93-28256

METAL WORKING
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374

METAL-METAL BONDING
A maskless flip-chip solder bumping technique
[DE93-009631] p 3021 N93-28372

METALLIC STARS
Constraints on chemical evolution models from QSOALS abundances p 3182 N93-26769

METALLICITY
Chemical abundances in low surface brightness galaxies: Implications for their evolution
p 3178 N93-26748
The hot interstellar medium in NGC 1399
p 3179 N93-26753
Metal abundances at z = 3.4 p 3179 N93-26757
Evidence for a multiphase, inhomogeneous interstellar medium in damped Ly alpha systems
p 3180 N93-26760
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772

METALLIZING
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667

METALLURGY
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148

METALORGANIC CHEMICAL VAPOR DEPOSITION
Innovative optoelectronic materials and structures using OMVPE
[AD-A262202] p 3152 N93-27683
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056

METALS
Metals production p 3214 N93-27970
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437

METASTABLE STATE
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
The onset of vortex turbulence p 2938 N93-28251

METEORITE COLLISIONS
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023

METEOROID PROTECTION
Contamination measurements on experiment M0003
p 2998 N93-28273

METEOROIDS
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
Approaches to dealing with meteoroid and orbital debris protection on the Space Station p 2971 N93-27838

METEOROLOGICAL PARAMETERS
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Meteorological Satellite Center Technical Note, no. 25, 1992
[MSC-TN-25] p 3075 N93-26991
The relationship between satellite-derived cloud parameters and measured maximum wind speed in the typhoon genesis stage p 3075 N93-26993
CSU FIRE 2 cirrus field experiment: Description of field deployment phase
[NASA-CR-193162] p 3077 N93-27292
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949
Next Generation Weather Radar (NEXRAD) Principal User Processor (PUP) Operational Test and Evaluation (OT&E) operational test plan
[DOT/FAA/CT-TN93/22] p 3027 N93-28054
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116

METEOROLOGICAL RADAR
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
Next Generation Weather Radar (NEXRAD) Principal User Processor (PUP) Operational Test and Evaluation (OT&E) operational test plan
[DOT/FAA/CT-TN93/22] p 3027 N93-28054
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds
[AD-A262673] p 3078 N93-28115
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

METEOROLOGICAL SATELLITES
Meteorological Satellite Center Technical Note, no. 25, 1992
[MSC-TN-25] p 3075 N93-26991
The relationship between satellite-derived cloud parameters and measured maximum wind speed in the typhoon genesis stage p 3075 N93-26993
DCP communication link monitoring program
p 3076 N93-26994

A comparison of GMS low-level cloud motion winds with sea surface winds observed by ships over western part of the North Pacific Ocean p 3076 N93-26995
A usage and maintenance of meteorological satellite data p 3076 N93-26996
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200

METEOROLOGICAL SERVICES
A prototype climate information system
[AD-A261799] p 3075 N93-26630
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949
Next Generation Weather Radar (NEXRAD) Principal User Processor (PUP) Operational Test and Evaluation (OT&E) operational test plan
[DOT/FAA/CT-TN93/22] p 3027 N93-28054

METEOROLOGY
NOAA Aeronomy Laboratory quadrennial report, 1989-1992: A summary of the past four years and a look ahead
[PB93-167401] p 3071 N93-26609
CSU FIRE 2 cirrus field experiment: Description of field deployment phase
[NASA-CR-193162] p 3077 N93-27292

METHANE
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374

METHOD OF CHARACTERISTICS
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467

METHOD OF MOMENTS
An efficient method for analyzing microstrip antennas with a dielectric cover using a spectral domain moment method
[EUT-91-E-255] p 3026 N93-27228
Moment method analysis of linearly tapered slot antennas
[NASA-CR-191474] p 2955 N93-27261

METHYL ALCOHOL
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374

METHYL COMPOUNDS
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685

METHYL POLYSILOXANES
Lareg area solar cells from lunar materials p 3066 N93-26688

METRIC SPACE
Bisimulation semantics for concurrency with atomicity and action refinement
[CWI-CS-R9210] p 3116 N93-27498
Processes as terms: Non-well-founded models for bisimulation
[CWI-CS-R9211] p 3097 N93-27499

MICROANALYSIS
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

MICROBURSTS (METEOROLOGY)
A statistical characterization of Denver-area microbursts
[AD-A262127] p 3078 N93-27675

MICROCHANNEL PLATES
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614

MICROCOMPUTERS
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191

MICROCRACKS
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel p 2992 N93-28265
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266

MICROCRYSTALS
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216

MICROELECTRONICS
An overview of MCC and its research p 2965 N93-27717
Solid state research
[AD-A262874] p 3154 N93-28247
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A262704] p 3028 N93-28393
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

MICROFIBERS
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989

MICROGRAVITY APPLICATIONS
Acceleration Studies
[NASA-CR-192547] p 2947 N93-26948
DADiSP processing guide p 2947 N93-26949
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
A multi-zone muffle furnace design
[NASA-TM-106153] p 3009 N93-27011
SPE (tm) regenerative hydrogen/oxygen fuel cells for extraterrestrial surface and microgravity applications p 2969 N93-27813

MICROHARDNESS
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366

MICROMECHANICS
Composite micromechanical modeling using the boundary element method
[NASA-TM-106127] p 3056 N93-27030
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Fracture micromechanics of ceramic composites p 2920 N93-27172

MICROMETEOROIDS
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023

MICROMINIATURIZATION
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022

MICROORGANISMS
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943

MICROPARTICLES
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454

MICROPOROSITY
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382

MICROPROCESSORS
A fault-tolerant RISC microprocessor for spacecraft applications p 2964 N93-27708
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009

MICROSCOPY
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690

MICROSTRIP ANTENNAS
Development of novel ferrite antennas
[AD-A261690] p 3022 N93-26629
An efficient method for analyzing microstrip antennas with a dielectric cover using a spectral domain moment method
[EUT-91-E-255] p 3026 N93-27228
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224
Parallel and series fed microstrip array with high efficiency and low cross polarization
[NASA-CASE-NPO-18678-1-CU] p 3029 N93-28422

MICROSTRIP DEVICES
Results on Monte-Carlo simulations of a microstrip gas counter
[NIKHEF-H/92-10] p 3040 N93-27541

MICROSTRIP TRANSMISSION LINES
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758
Parallel and series fed microstrip array with high efficiency and low cross polarization
[NASA-CASE-NPO-18678-1-CU] p 3029 N93-28422

MICROSTRUCTURE
Magnetic thin films and nanostructures: Anisotropy, microstructure, and their inter-relationship
[DE93-007714] p 3002 N93-26611
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
Fracture micromechanics of ceramic composites p 2920 N93-27172
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
Transport of electron-waves and single-charges in semiconductor nanostructures
[ETN-93-93609] p 3031 N93-27880
Workshop on Optical Properties of Mesoscopic Semiconductor Structures
[AD-A263024] p 3147 N93-27912
Material analysis of austempered ductile iron
[AD-A261953] p 3000 N93-27921
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366
Sub-nanosecond optical diagnostics of laser-material interaction and dynamic microstructure of materials
[DE93-008702] p 3049 N93-28369

MICROWAVE ANTENNAS
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752

MICROWAVE CIRCUITS
Data communications service by VSAT network in the Philippines p 3024 N93-26655
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265

MICROWAVE FREQUENCIES
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752

MICROWAVE IMAGERY
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949
A model-based approach for detection of objects in low resolution passive millimeter wave images
[NASA-CR-193161] p 2943 N93-28418
MICROWAVE LANDING SYSTEMS
A model-based approach for detection of objects in low resolution passive millimeter wave images
[NASA-CR-193161] p 2943 N93-28418
MICROWAVE OSCILLATORS
Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator
[AD-A262352] p 3031 N93-27645
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774
MICROWAVE POWER BEAMING
Power beaming options for the Space Station p 2969 N93-27812
Choice of antenna geometry for microwave power transmission from solar power satellites p 2988 N93-27987
MICROWAVE RADIOMETERS
EOS/AMSU-A NASA/Aerojet Interface Meeting
[NASA-TM-108234] p 3063 N93-27288
MICROWAVE SENSORS
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
MICROWAVE SOUNDING
EOS/AMSU-A NASA/Aerojet Interface Meeting
[NASA-TM-108234] p 3063 N93-27288
MICROWAVE SPECTRA
H1 in RSA galaxies p 3203 N93-26891
MICROWAVE TRANSMISSION
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385
MICROWAVES
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Contactless microwave lifetime measurement
[ETN-93-93595] p 3027 N93-27870
MILITARY AIR FACILITIES
GPS measurements at Vandenberg, AFB
[AD-A262280] p 2941 N93-28241
MILITARY AIRCRAFT
A prediction model for noise from low-altitude military aircraft
[AD-A262494] p 3130 N93-27662
MILITARY TECHNOLOGY
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 8: Phillips Laboratory
[AD-A261972] p 3163 N93-27642
MILKY WAY GALAXY
Constraints on chemical evolution models from QSOALS abundances p 3182 N93-26769
Interstellar Mg II and C IV absorption by 1 1/2 galaxies along the sightline to MrK 205 p 3182 N93-26770
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
MILLIMETER WAVES
Primeval galaxies in the sub-mm and mm p 3172 N93-26713
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
Zone plate lens antennas for millimeter and submillimeter wavelengths p 3016 N93-27757
Embedding impedance approximations in the analysis of SIS mixers p 3016 N93-27760
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
Modeling, design, fabrication, and testing of InP Gunn devices in the D-band (110 GHz - 170 GHz) p 3018 N93-27767
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Resonant tunneling diodes as sources for millimeter and submillimeter wavelengths p 3018 N93-27772
Monolithic millimeter-wave diode grid frequency multiplier arrays p 3019 N93-27775
Planar doped barrier subharmonic mixers p 3019 N93-27777
New results and applications for the quasioptical gyrotron
[AD-A261961] p 3046 N93-27950
MIMO (CONTROL SYSTEMS)
Identification for the control of MIMO industrial processes
[EUT-91-E-256] p 3010 N93-27229
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241
Optical interferometer testbed p 3060 N93-28168
MINERAL DEPOSITS
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Information extraction and integration in mineral exploration p 3167 N93-28072
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
MINERAL EXPLORATION
Unmanned lunar surface exploration p 2951 N93-28035
Moon revolving observation satellites p 2952 N93-28037
Research on lunar resources development and their utilization p 2952 N93-28039
Science missions for lunar resources exploration p 2953 N93-28044
Information extraction and integration in mineral exploration p 3167 N93-28072
MINERAL OILS
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
MINERALOGY
Composition of near-Earth asteroids p 3205 N93-26690
Information extraction and integration in mineral exploration p 3167 N93-28072
MINERALS
Information extraction and integration in mineral exploration p 3167 N93-28072
MINKOWSKI SPACE
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions p 3204 N93-28081
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462
MINORITY CARRIERS
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
MIRA VARIABLES
The galactic center stellar population in the near infrared p 3204 N93-28080
MIRRORS
Cosmology with liquid mirror telescopes p 3171 N93-26708
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000
Second LDEF Post-Retrieval Symposium interim results of experiment A0034 p 3008 N93-28283
LUTE primary mirror study
[NASA-CR-193069] p 3148 N93-28448
MISS DISTANCE
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
MISSILE COMPONENTS
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
Fabrication techniques and technologies for missile seeker microelectronic components (focusing on multi-chip module substrate reliability)
[AD-A262809] p 3033 N93-28381
MISSILE CONTROL
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
MISSILE DEFENSE
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185
MISSILE TRAJECTORIES
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
MISSILES
The Fifth Symposium on Numerical and Physical Aspects of Aerodynamic Flows
[NASA-CR-193000] p 2931 N93-27427
MISSION PLANNING
Nuclear electric propulsion systems overview p 2955 N93-26970
The 20 kWe NEP system studies p 2982 N93-26971
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
Scoping calculations of power sources for NEP p 2982 N93-26973
NEP power subsystem modeling p 2982 N93-26974
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report p 2983 N93-26976
The 20 kWe NEP flight system p 2983 N93-26983
Innovative electric propulsion thruster modeling p 2984 N93-26989
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290
The challenges and benefits of lunar exploration p 3211 N93-27957
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Conceptual study on manned engineering test satellites p 2949 N93-28017
Artificial gravity experiment satellites p 2949 N93-28018
Study of satellite microminiaturization technology p 2949 N93-28021
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032
Lunar surface experiment system p 2951 N93-28034
Unmanned lunar surface exploration p 2951 N93-28035
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Conceptual study of lunar landing modules p 2952 N93-28043
Mars exploration mission p 2953 N93-28045
Mars revolving observation satellite p 2953 N93-28047
Outline of Mars explorer system p 2953 N93-28048
ROSETTA: The ESA sample return mission p 2953 N93-28049
MISTUNING (TURBOMACHINERY)
Magnetic suspension characteristics of electromagnetic actuators p 2960 N93-27561
MIXING CIRCUITS
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions p 3013 N93-27743
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
A fluted tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz p 3014 N93-27749
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
Embedding impedance approximations in the analysis of SIS mixers p 3016 N93-27760
Sub micron area Nb/AlO(x)/Nb tunnel junctions for submillimeter mixer applications p 3016 N93-27761

Noise in Josepson effect mixers and the RSJ model
p 3016 N93-27762
Fabrication and characterization of high current-density, submicron, NbN/MgO/NbN tunnel junctions
p 3017 N93-27763
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Submillimeter wave detection with superconducting tunnel diodes p 3018 N93-27769
Evaluation of integrated tuning elements with SIS devices p 3018 N93-27770
Source conductance scaling for high frequency superconducting quasiparticle receivers
p 3018 N93-27771
Planar GaAs diodes for THz frequency mixing applications p 3019 N93-27776
Planar doped barrier subharmonic mixers
p 3019 N93-27777
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781

MIXING LAYERS (FLUIDS)
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434

MIXING LENGTH FLOW THEORY
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467

MOBILE COMMUNICATION SYSTEMS
The 1992 United Nations Workshop on Space Communication for Development: Proceedings
p 3022 N93-26640
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
Iridium: Covering the globe with personal communication p 3022 N93-26644
Mobile communication via satellite towards the year 2000 p 3023 N93-26646
Worldwide seamless cellular satellite communications: The global mobile communication by Globalstar system
p 3024 N93-26653

MODAL RESPONSE
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159

MODEL REFERENCE ADAPTIVE CONTROL
New adaptive controllers for aircraft
p 2921 N93-27180

MODELS
EMDABS: Design and formal specification of a datamodel for a clinical research database system
[EUT-91-E-250] p 3165 N93-27242

MODEMS
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014

MODULARITY
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
Periodic application of concurrent error detection in processor array architectures
[NASA-CR-193217] p 3106 N93-27238
Advanced modular power supplies for Space Station Freedom p 2969 N93-27811

MODULATION
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014

MODULATORS
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 3148 N93-28135

MODULES
Experiment/facility requirements document for the Space Station Furnace Facility. Section 1: Integrated configuration
[NASA-CR-192533] p 2958 N93-27147
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235

MODULUS OF ELASTICITY
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263

MOISTURE CONTENT
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
Airmass modification by vertical motion: Discussion and case study
[PB93-160596] p 3079 N93-28134

MOLDING MATERIALS
A new class of high strength molding resins, phase 1
[AD-A262691] p 3005 N93-28117

MOLECULAR BEAM EPITAXY
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Investigation of misfit dislocation configurations in MBE-grown InGaAs layers on misaligned GaAs (001) substrates
[DE93-007578] p 3151 N93-27522
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913

MOLECULAR BIOLOGY
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181

MOLECULAR CHAINS
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114

MOLECULAR CLOUDS
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
Molecular clouds in the centers of galaxies: Constraints from HCN and CO-13 line emission
p 3188 N93-26806
Infrared fine-structure line diagnostics of shrouded active galactic nuclei p 3199 N93-26870
Cosmic evolution of extragalactic C 1, C 2, and CO luminosity p 3200 N93-26876
Evolution of molecular clouds p 3203 N93-26892
The origin and evolution of dust in interstellar and circumstellar environments
[NASA-CR-193025] p 3204 N93-27287

MOLECULAR COLLISIONS
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520
Energy transfer studies in interhalogen molecules
[AD-A262888] p 3137 N93-28375

MOLECULAR ENERGY LEVELS
Energy and chemical change
[AD-A262359] p 3133 N93-27648

MOLECULAR EXCITATION
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520

MOLECULAR FLOW
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface
p 2928 N93-27222

MOLECULAR GASES
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
Molecular gas temperature and density in spiral galaxies p 3185 N93-26792
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
Molecular gas content of galaxies in the Hydra-Centaurus supercluster p 3188 N93-26807
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2
p 3188 N93-26811
Evolution of molecular clouds p 3203 N93-26892
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane
p 3204 N93-26894

MOLECULAR INTERACTIONS
Application of molecular dynamics to computations of spatial distributions of gas streams from a solid surface
p 2928 N93-27222
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225

MOLECULAR IONS
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
Strong-field dissociation dynamics
[DE93-006671] p 3136 N93-28310

MOLECULAR SPECTROSCOPY
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424

MOLECULAR STRUCTURE
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
Tailored organometallic polymers
[AD-A262446] p 3004 N93-27697
Studies on zeolites: Molecular mechanics, framework stability, and crystal growth
[ETN-93-93613] p 3152 N93-27935
Zeolite crystal growth and the structure on an atomic scale
[ETN-93-93615] p 3153 N93-27936
Molecular dynamics modeling of electric double layer
[AD-A263068] p 3134 N93-27954
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334
Electron transfer, proton transfer and photoaddition reactions in isolated clusters
[AD-A262719] p 3137 N93-28398

MOLECULES
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614

MOLTEN SALT ELECTROLYTES
Strategic planning for molten carbonate fuel cell development and commercialization
[DE93-009156] p 3064 N93-27107

MOLTEN SALTS
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148

MOLYBDENUM
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618

MOLYBDENUM OXIDES
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941

MOMENTS OF INERTIA
Low-spin identical bands in neighboring odd-A and even-even nuclei
[DE93-008569] p 3132 N93-27486

MOMENTUM
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330

MOMENTUM THEORY
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284

MONITORS
Contamination measurements on experiment M0003
p 2998 N93-28273

MONOCHROMATORS
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311

MONOPOLE ANTENNAS
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 2
[AD-A262098] p 3027 N93-27670
A computer analysis of a conical monopole for use at Naval High Frequency Direction Finding Receiving Sites, part 1
[AD-A262099] p 3027 N93-27671

MONOPROPELLANTS
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216

MONOSACCHARIDES
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351

MONOTONE FUNCTIONS
Positivity-preserving numerical schemes for multidimensional advection
[NASA-TM-106055] p 3038 N93-27091

MONTE CARLO METHOD
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682

Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
Reliability analysis of complex models using sure bounds [NASA-CR-191445] p 3091 N93-26897
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program [NASA-TM-106006] p 3055 N93-27025
A transfer matrix approach to vibration localization in mistuned blade assemblies [NASA-TM-106112] p 3056 N93-27088
A study of electron transfer using a three-level system coupled to an ohmic bath p 3145 N93-27346
Results on Monte-Carlo simulations of a microstrip gas counter [NIKHEF-H/92-10] p 3040 N93-27541
Convergence of compact lattice scalar field theory to its continuum limit [SSCL-PREPRINT-771] p 3156 N93-27584
Simulations of solvent effects on confined electrolytes [AD-A262294] p 3133 N93-27677
Monte Carlo simulations of solvent effects on confined electrolytes [AD-A262292] p 2996 N93-28245
Structure and thermodynamics of the soft ion model electrolyte solutions [AD-A262293] p 3136 N93-28246
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF p 3008 N93-28282
The Monte Carlo/S(sub N) hybrid method with orthogonal interface basis vectors [DE93-005462] p 3104 N93-28299

MOON
Future Space Activity Workshop: Lunar Base Workshop 1992 [JTN-93-80420] p 2948 N93-28014
Science missions for lunar resources exploration p 2953 N93-28044

MOORING
Moored instrument for time series studies of primary production and other microbial rate processes [DE93-010148] p 3079 N93-26943

MORPHOLOGY
Evolution of luminous IRAS galaxies: Radio imaging p 3184 N93-26786
CO deficiency in galaxies of the Fornax cluster? p 3185 N93-26791
The dependence on morphology of the gas content in galactic disks p 3185 N93-26793
The multicomponent structure of bulges p 3187 N93-26800
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867
Metallurgy and properties of plasma spray formed materials [NASA-TM-108269] p 3003 N93-27125
Mathematical morphology as a tool for shape description [CWI-BS-R9216] p 3119 N93-27991
Gray-scale granulometries compatible with spatial scalings [CWI-BS-R9212] p 3121 N93-28088

MORTALITY
The cumulative formulation of (physiologically) structured population models [CWI-AM-R9205] p 3124 N93-27298

MOSSBAUER EFFECT
X ray and gamma ray spectroscopy of solids under pressure [DE93-010966] p 2996 N93-28360

MULTIGRID METHODS
Parallel computing strategies for block multigrid implicit solution of the Euler equation p 2922 N93-27190
On steady, inviscid shock waves at continuously curved, convex surfaces [CWI-NM-R9202] p 3039 N93-27299
Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB [CWI-NM-R9213] p 3031 N93-27367
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
Steady incompressible flow around objects in general coordinates with a multigrid solution method [REPT-92-48] p 3041 N93-27884

MULTIPATH TRANSMISSION
A new analysis of the multipath radar data measured by standard telecommunication laboratories [AD-A261981] p 3026 N93-27643
Multipath noise reduction spread spectrum signals [NASA-CASE-NPO-18970-1-CU] p 3028 N93-28126

MULTIPHOTON ABSORPTION
Quasiclassical approach to ionization of atoms by strong laser pulses: The comparison with the simpleman's models and Newtonian dynamics [DE93-008738] p 3137 N93-28463

MULTIPLE ACCESS
Communications and tracking technology discipline p 2972 N93-27856

MULTIPLE TARGET TRACKING
Minimum effort interception of multiple targets p 2925 N93-27205

MULTIPLICATION
Massively parallel searching for better algorithms [DE93-009501] p 3107 N93-27623

MULTIPLIERS
The Third International Symposium on Space Terahertz Technology: Symposium proceedings [NASA-CR-193013] p 3011 N93-27726
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Superlattice barrier varactors p 3012 N93-27738
A 200 GHz tripler using single barrier varactor p 3013 N93-27740

MULTIPOLES
Molecular dynamics modeling of electric double layer [AD-A263068] p 3134 N93-27954

MULTIPROCESSING (COMPUTERS)
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [MEMO-COSOR-92-32] p 3106 N93-27361
Embedded multiprocessor technology for VHSIC insertion p 2964 N93-27713
Automatic management of parallel and distributed system resources p 2965 N93-27715
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [CWI-BS-R9211] p 3108 N93-27990
An ultrasonic sensor controller for mapping and servo control in robotic systems [DE93-009605] p 3046 N93-28160
Workform processing: A new paradigm for fault-tolerant distributed parallel computation [AD-A262087] p 3108 N93-28222
Sparse matrix algorithms on distributed memory multiprocessors [DE93-009368] p 3103 N93-28231

MULTISPECTRAL LINEAR ARRAYS
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689

MULTISTAGE ROCKET VEHICLES
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle [NASA-TP-3335] p 2955 N93-27016
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system [NASA-TM-106118] p 2955 N93-27018

MULTIVARIATE STATISTICAL ANALYSIS
Bootstrapping multivariable U-quantiles and related statistics [CWI-BS-R9215] p 3126 N93-28091

MUONS
Quons, an interpolation between Bose and Fermi oscillators p 3141 N93-27312
Selected problems in experimental intermediate energy physics [DE93-007300] p 3137 N93-28356
Studies of high energy phenomena using muons [DE93-009373] p 3140 N93-28367

MURCHISON METEORITE
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684

MUSCLES
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism [NASA-CR-193041] p 3083 N93-27102
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption [FOA-B-40420-4.4] p 3082 N93-27989

MUSCULAR FUNCTION
Growth factor involvement in tension-induced skeletal muscle growth [NASA-CR-193023] p 3083 N93-27113

MUSCULOSKELETAL SYSTEM
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism [NASA-CR-193041] p 3083 N93-27102
Growth factor involvement in tension-induced skeletal muscle growth [NASA-CR-193023] p 3083 N93-27113

MYLAR (TRADEMARK)
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753

N

NAP-OF-THE-EARTH NAVIGATION
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays p 2920 N93-27177
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179

NARROWBAND
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar [NASA-CR-193160] p 3047 N93-27249
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference [AD-A263020] p 3031 N93-27911

NASA PROGRAMS
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
Systems overview p 2977 N93-26915
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
NASA'S information technology activities for the 90's p 3165 N93-27046
USRA/RIACS [NASA-CR-193216] p 3092 N93-27224
Chronology of KSC and KSC related events for 1992 [NASA-TM-107561] p 3219 N93-27285
The NASA Scientific and Technical Information Program: Exploring challenges, creating opportunities [NASA-SP-7103] p 3166 N93-27426
NASA Small Business Innovation Research Program. Composite List of Projects, 1983 to 1989 [NASA-TM-104991] p 3164 N93-27639
Repository-Based Software Engineering Program: Working Program Management Plan [NASA-CR-193113] p 3104 N93-28319
The repository-based software engineering program: Redefining AdaNET as a mainstream NASA source [NASA-CR-193114] p 3104 N93-28328

NASA SPACE PROGRAMS
Mars exploration program p 2976 N93-26909
Solar System Exploration Division: Requirements for space nuclear propulsion p 2976 N93-26910
Aeronautics and space report of the President: Fiscal year 1992 activities p 3219 N93-27041
NASA Discovery Program Workshop [NASA-TM-108233] p 2948 N93-27290

NASTRAN
Automatization of structural analysis calculation procedure: NASTRAN pre and post processors [ETN-93-93706] p 3100 N93-27947

NATURAL GAS
Acoustic determination of phase equilibria [PB93-167120] p 3129 N93-26606
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry [PB93-169118] p 3067 N93-26623
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993 [PB93-165751] p 3064 N93-26634
Strategic planning for molten carbonate fuel cell development and commercialization [DE93-009156] p 3064 N93-27107
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry [PB93-174613] p 3069 N93-27406
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders [PB93-165835] p 3057 N93-27417

Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512

NATURAL LANGUAGE (COMPUTERS)
GWB: Manual for the Grammar Work Bench, version 1.0
[TR-91-28] p 3100 N93-27885
The Grammar Workbench: A first step towards Lingware engineering
[TR-92-06] p 3100 N93-27902
Dynamic modal predicate logic
[CWI-CS-R9237] p 3101 N93-28001

NATURAL SATELLITES
Approaches to dealing with meteoroid and orbital debris protection on the Space Station p 2971 N93-27838

NAVIER-STOKES EQUATION
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
Grid adaption using Chimera composite overlapping meshes
[NASA-TM-106163] p 3111 N93-27065
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator p 2985 N93-27138
Transient simulation of ram accelerator flowfields p 2986 N93-27139
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
Towards industrial-strength Navier-Stokes codes p 2938 N93-27468
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586
Steady incompressible flow around objects in general coordinates with a multigrid solution method
[REPT-92-48] p 3041 N93-27884
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955

NAVIGATION
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178

NAVIGATION SATELLITES
GPS L1-L2 bias determination
[AD-A262141] p 2941 N93-27544

NAVSTAR SATELLITES
Follow-on operational test and evaluation of the NAVSTAR global positioning system air integration/installation program
[AD-A263067] p 2941 N93-27925

NEAR INFRARED RADIATION
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Distant radio galaxies in the near IR p 3177 N93-26742
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Powering the superwind in NGC 253 p 3203 N93-26893
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar
[NASA-CR-193160] p 3047 N93-27249
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690
The galactic center stellar population in the near infrared p 3204 N93-28080

NEBULAE
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723

NEGATIVE CONDUCTANCE
Negative Differential Resistance (NDR) frequency conversion with gain p 3017 N93-27766

NEGATIVE IONS
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618

NEGATIVE RESISTANCE DEVICES
Negative Differential Resistance (NDR) frequency conversion with gain p 3017 N93-27766

NEODYMIUM
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622

NEODYMIUM LASERS
Summary of progress in laser fusion; advanced technology developments: National Laser Users Facility news; and a laser system report --- laser fusion and laser energetics
[DE93-009054] p 3047 N93-27120

NETHERLANDS
Some aspects of a 3-dimensional reference system for surveying in the Netherlands: Quality analysis of GPS phase observations
[REPT-92.1] p 3063 N93-27368

NETWORK ANALYSIS
Current trends in the semantics of dataflow
[RUU-CS-92-22] p 3167 N93-28063

NETWORK CONTROL
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Electronic neural networks p 2964 N93-27711

NEURAL NETS
Automata network models of galaxy evolution p 3201 N93-26879
Neural networks for calibration tomography
[NASA-TM-106164] p 3045 N93-26906
Robustness enhancement of neurocontroller and state estimator
[NASA-TM-106028] p 2946 N93-26907
Calibration of a shock wave position sensor using artificial neural networks
[NASA-TM-106138] p 3045 N93-27001
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Radial basis function network learns ceramic processing and predicts related strength and density
[NASA-TM-106048] p 2990 N93-27129
Adaptive control strategies for flexible robotic arm
[NASA-CR-193111] p 3050 N93-27159
Six degree of freedom active vibration damping for space application
[NASA-CR-193028] p 3056 N93-27165
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Exact classification with two-layered perceptrons
[MEMO-COSOR-92-25] p 3112 N93-27273
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
Center for Aeronautics and Space Information Sciences
[NASA-CR-193140] p 3106 N93-27289
Neural networks: Reliability and data analysis
[AD-A262354] p 3109 N93-27646
Electronic neural networks p 2964 N93-27711
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395

NEUROLOGY
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409

NEUROPHYSIOLOGY
Analysis of neural systems involved in modulation of memory storage
[AD-A262418] p 3084 N93-27654

NEUTRAL ATMOSPHERES
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483

NEUTRAL GASES
High velocity clouds in nearby disk galaxies p 3187 N93-26804
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811

NEUTRINOS
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095
Research in elementary particle physics
[DE93-009764] p 3136 N93-28235

NEUTRON DIFFRACTION
NMR and optical studies of piezoelectric polymers
[DE93-010967] p 3006 N93-28361

NEUTRON IRRADIATION
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940

NEUTRON SCATTERING
NMR and optical studies of piezoelectric polymers
[DE93-010967] p 3006 N93-28361

NEUTRON STARS
A comparative examination of LMC X-4 and Her X-1 x ray double star systems
[MPE-232] p 3205 N93-28202

NEUTRONS
Theoretical studies in nuclear physics
[DE93-010142] p 3139 N93-28215
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234
The search for cold dark matter using germanium detectors p 3205 N93-28250
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356

NEVADA
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966

NEWTON METHODS
Computing modified Newton directions using a partial Cholesky factorization
[DE93-009584] p 3128 N93-28454

NICKEL ALLOYS
Fatigue in single crystal nickel superalloys
[AD-A262126] p 2999 N93-27674
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371

NICKEL CADMIUM BATTERIES
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038

NICKEL HYDROGEN BATTERIES
Basic statistical analyses of candidate nickel-hydrogen cells for the Space Station Freedom
[NASA-TM-106111] p 3123 N93-27124

NICKEL ISOTOPES
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331

NICKEL STEELS
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253

NIOBIUM
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779

NIOBIUM ALLOYS
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113

NIOBIUM CARBIDES
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303

NITRIC OXIDE
Nitric oxide formation in a lean, premixed-prevaporized jet A/air flame tube: An experimental and analytical study
[NASA-TM-105722] p 3068 N93-27012

NITRIDES
Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219

NITROGEN
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913

NITROGEN OXIDES
Technological options for acid rain control
[PB93-173094] p 3069 N93-27527
Evaluation of NO(x)-induced toxicity
[AD-A261034] p 3084 N93-28122

NITROMETHANE
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296

NOAA 10 SATELLITE
Derivation of total ozone amount from NOAA/TOVS data p 3071 N93-26997

NOBLE METALS
Recovery and separation of precious metals from space p 3001 N93-26686
NOISE (SOUND)
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
NOISE INTENSITY
A noise level analysis of special multiple-spin VAS data during storm-fest
[NOAA-TR-NESDIS-65] p 3071 N93-27079
NOISE PREDICTION (AIRCRAFT)
A prediction model for noise from low-altitude military aircraft
[AD-A262494] p 3130 N93-27662
NOISE REDUCTION
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
Which Q-analogue of the squeezed oscillator?
p 3142 N93-27320
Multipath noise reduction spread spectrum signals
[NASA-CASE-NPO-18970-1-CU] p 3028 N93-28126
Activities report of the Technische Dienst TNO-TU, Delft (Netherlands)
[ETN-93-93343] p 3219 N93-28201
NOISE TEMPERATURE
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions
p 3013 N93-27743
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
Slot antenna SIS mixers for submillimeter wavelengths
p 3014 N93-27745
Noise in Josepson effect mixers and the RSJ model
p 3016 N93-27762
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
All-solid-state radiometers for environmental studies to 700 GHz p 3020 N93-27784
NOMENCLATURES
Acronym dictionary
[NASA-CR-193218] p 3164 N93-26900
NONDESTRUCTIVE TESTS
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
NONEQUILIBRIUM IONIZATION
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
NONLINEAR EQUATIONS
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
The method of minimal normal forms --- for solving nonlinear differential equations
[DE93-008060] p 3118 N93-27627
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883
On Radon-Nikodym derivatives of finitely additive measures induced by nonlinear transformations on Hilbert space
[MEMO-1063] p 3129 N93-28147
Localized solutions of N + 1 dimensional evolution equations
[SSCL-PREPRINT-753] p 3157 N93-28210
Using pseudo Kalman-filters in the presence of constraints application to sensing behaviors
[INRIA-RR-1669] p 3122 N93-28442
NONLINEAR EVOLUTION EQUATIONS
Inhomogeneous Toda lattice: Its hierarchy and Darhoux-Backlund transformations
[SSCL-PREPRINT-762] p 3121 N93-28146
Integrable symplectic maps
[SSCL-PREPRINT-744] p 3122 N93-28387
NONLINEAR FILTERS
A representation result for nonlinear filter maps on a white noise framework
[MEMO-1062] p 3129 N93-28013
A boson field stochastic calculus and quantum filtering in Fock space
[SSCL-PREPRINT-723] p 3156 N93-28096
NONLINEAR OPTICS
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Tailored organometallic polymers
[AD-A262446] p 3004 N93-27697
Workshop on Optical Properties of Mesoscopic Semiconductor Structures
[AD-A263024] p 3147 N93-27912
Enhanced chromophore polymeric NLO materials
[AD-A262258] p 3147 N93-28111
Nonlinear Optics: Materials, Fundamentals, and Applications. Postdeadline papers
[AD-A261807] p 3147 N93-28123
Nonlinear optics in three level atomic systems
[AD-A262793] p 3148 N93-28376
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433
NONLINEAR PROGRAMMING
New approaches to linear and nonlinear programming
[DE93-010134] p 3103 N93-28214
NONLINEAR SYSTEMS
Hypersonic panel flutter in a rarefied atmosphere
[NASA-CR-4514] p 2929 N93-27084
Parameter identification for nonlinear aerodynamic systems
[NASA-CR-193072] p 2930 N93-27282
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
Balancing for nonlinear systems
[MEMO-1071] p 3121 N93-28156
Middeck 0-gravity Dynamics Experiment (MODE)
p 3010 N93-28171
NONLINEARITY
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
Collective dynamics in dense fluid mixtures
p 3041 N93-28069
Information extraction and integration in mineral exploration p 3167 N93-28072
Nonlinear Optics: Materials, Fundamentals, and Applications. Postdeadline papers
[AD-A261807] p 3147 N93-28123
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
NONPOINT SOURCES
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
NONSTABILIZED OSCILLATION
On the instability of the flow in an oscillating tank of fluid
[NASA-CR-191424] p 3037 N93-26896
NOSE CONES
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
NOSE WHEELS
Testing a wheeled landing gear system for the TH-57 helicopter
[AD-A262152] p 2942 N93-27547
NOZZLE DESIGN
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324
Analytical and experimental investigation of annular propulsive nozzles
[AD-A262685] p 2945 N93-28391
NOZZLE EFFICIENCY
Analytical and experimental investigation of annular propulsive nozzles
[AD-A262685] p 2945 N93-28391
NOZZLE FLOW
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187
Analytical and experimental investigation of annular propulsive nozzles
[AD-A262685] p 2945 N93-28391
NOZZLE INSERTS
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
NUCLEAR ASTROPHYSICS
Nuclear interactions in high energy heavy ions and applications in astrophysics
[DE93-007302] p 3140 N93-28357
NUCLEAR CHEMISTRY
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
NUCLEAR ELECTRIC PROPULSION
Nuclear Propulsion Technical Interchange Meeting, volume 1
[NASA-CP-10116-VOL-1] p 2976 N93-26908
Solar System Exploration Division: Requirements for space nuclear propulsion p 2976 N93-26910
Focused technology: Nuclear propulsion
p 2976 N93-26912
Overview of DOE space nuclear propulsion programs
p 2977 N93-26913
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966
Nuclear electric propulsion systems overview
p 2955 N93-26970
The 20 kWe NEP system studies
p 2982 N93-26971
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
Scoping calculations of power sources for NEP
p 2982 N93-26973
NEP power subsystem modeling
p 2982 N93-26974
NEP processing, operations, and disposal
p 2982 N93-26975
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report
p 2983 N93-26976
NEP technology: FY 1992 milestones (NASA LeRC)
p 2983 N93-26977
Power management and distribution technology
p 2983 N93-26978
Radiator technology p 2983 N93-26979
JPL nuclear electric propulsion task
p 2983 N93-26980
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
The 20 kWe NEP flight system p 2983 N93-26983
The 100-500 kWe NEP systems p 2983 N93-26984
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985
NEP systems model p 2984 N93-26986
NEP systems model p 2984 N93-26987
Thruster models for NEP system analysis
p 2984 N93-26988
Innovative electric propulsion thruster modeling
p 2984 N93-26989
GPS system simulation methodology
p 2984 N93-26990
NUCLEAR EMULSIONS
Collaborations among nuclear emulsion groups in Europe during the 1950's
[NOTA-INTERNA-973] p 3133 N93-27701
NUCLEAR ENERGY
Nuclear systems in space? Does/will the public accept them? p 2977 N93-26917
NUCLEAR ENGINE FOR ROCKET VEHICLES
Engine management during NTRE start up
p 2980 N93-26953
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
Nuclear Engine System Simulation (NESS) version 2.0
p 2981 N93-26958
NUCLEAR EXPLOSIONS
Fiber-optic shock position sensor
[DE93-009607] p 3045 N93-27625
Analysis of seismograms from nuclear explosions of known yield at Degelen Mountain and Konystan in east Kazakhstan, USSR
[AWE-O-2/92] p 3073 N93-27703
NUCLEAR FUEL ELEMENTS
Laser diagnostics for NTP fuel corrosion studies
p 2979 N93-26936
NUCLEAR FUELS
Nuclear gas core propulsion research program
p 2979 N93-26933
Nuclear propulsion technology advanced fuels technology p 2979 N93-26935
Space Nuclear Thermal Propulsion (SNTP) tests
p 2980 N93-26938

NUCLEAR FUSION
Plasma confinement theory and transport simulation
[DE93-009755] p 3149 N93-26617
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
NUCLEAR INTERACTIONS
Description of alpha-nucleus interaction cross sections for cosmic ray shielding studies
[NASA-TP-3285] p 3138 N93-26905
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331
Nuclear interactions in high energy heavy ions and applications in astrophysics
[DE93-007302] p 3140 N93-28357
NUCLEAR MAGNETIC RESONANCE
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293
NMR and optical studies of piezoelectric polymers
[DE93-010967] p 3006 N93-28361
NUCLEAR MODELS
HZEFRG1: An energy-dependent semiempirical nuclear fragmentation model
[NASA-TP-3310] p 3138 N93-27031
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
NUCLEAR PARTICLES
Fluctuations in quantum transport theories of nuclear matter
[KVI-930] p 3155 N93-27395
NUCLEAR PHYSICS
The harmonic oscillator and nuclear physics
p 3146 N93-27354
Theoretical studies in nuclear physics
[DE93-010142] p 3139 N93-28215
The Monte Carlo/S(sub N) hybrid method with orthogonal interface basis vectors
[DE93-005462] p 3104 N93-28299
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
NUCLEAR POWER PLANTS
Bibliography of the Maryland Power Plant Research Program, fourteenth edition
[PB93-174241] p 3068 N93-27404
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058
NUCLEAR PROPULSION
Nuclear Propulsion Technical Interchange Meeting, volume 1
[NASA-CP-10116-VOL-1] p 2976 N93-26908
Solar System Exploration Division: Requirements for space nuclear propulsion p 2976 N93-26910
DOD requirements for space nuclear thermal propulsion p 2976 N93-26911
Focused technology: Nuclear propulsion
p 2976 N93-26912
Overview of DOE space nuclear propulsion programs
p 2977 N93-26913
Space Nuclear Thermal Propulsion (SNTP) program
p 2977 N93-26914
Systems overview p 2977 N93-26915
Requirements management and control
p 2977 N93-26916
Nuclear systems in space? Does/will the public accept them? p 2977 N93-26917
Rover/NERVA-derived near-term nuclear propulsion
p 2977 N93-26918
Advanced propulsion engine assessment based on a cermet reactor p 2977 N93-26919
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
NTRE extended life feasibility assessment
p 2977 N93-26921
Lunar NTR vehicle design and operations study
p 2978 N93-26922
Mission design considerations for nuclear risk mitigation p 2978 N93-26923
Enabler 1 and 2 engine system design modeling and comparisons p 2978 N93-26924
Clustered engine study p 2978 N93-26925
NTP comparison process p 2978 N93-26926
Nuclear thermal propulsion technology overview
p 2978 N93-26927
NTR plume modeling p 2978 N93-26929
Computational fluid dynamics for nuclear thermal propulsion p 2979 N93-26930
Probabilistic structural analysis for nuclear thermal propulsion p 2979 N93-26931
MSFC nuclear thermal propulsion technology program
p 2979 N93-26932
Nuclear gas core propulsion research program
p 2979 N93-26933
Nuclear propulsion technology advanced fuels technology p 2979 N93-26935
Laser diagnostics for NTP fuel corrosion studies
p 2979 N93-26936
SNTP propellant management system
p 2979 N93-26937
Space Nuclear Thermal Propulsion (SNTP) tests
p 2980 N93-26938
SNTP environmental, safety, and health
p 2980 N93-26939
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Particle bed reactor modeling p 2980 N93-26954
Computational modeling of nuclear thermal rockets
p 2980 N93-26956
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
Nuclear Engine System Simulation (NESS) version 2.0
p 2981 N93-26958
SAFSIM overview p 2981 N93-26959
Kinetic: A system code for analyzing nuclear thermal propulsion rocket engine transients
p 2981 N93-26960
Next generation system modeling of NTR systems

Kinetic: A system code for analyzing nuclear thermal propulsion rocket engine transients
p 2981 N93-26960
Next generation system modeling of NTR systems
p 2981 N93-26961
Rocket engine numerical simulator
p 2981 N93-26962
Facilities p 2954 N93-26963
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
NUCLEAR SPIN
Number of saddle points of the energy surface in SK spin-glass
[SSCL-PREPRINT-726] p 3134 N93-28099
NUCLEAR STRUCTURE
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
Theoretical studies in nuclear physics
[DE93-010142] p 3139 N93-28215
NUCLEATION
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
The onset of vortex turbulence p 2938 N93-28251
NUCLEONS
Calculation of the nucleon structure function from the nucleon wave function p 3147 N93-27359
Low-spin identical bands in neighboring odd-A and even-even nuclei
[DE93-008569] p 3132 N93-27486
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
NUMBER THEORY
Factorizations of a(sub n) +/- 1, 13 less than or equal to a less than 100
[CWI-NM-R9212] p 3114 N93-27366
On partitions into unequal squares and related problems
[MEMO-1055] p 3120 N93-28003
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083
NUMERICAL ANALYSIS
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
Numerical simulations of bent, disrupted radio jets
p 3188 N93-26813
Parallel solution of high-order numerical schemes for solving incompressible flows
[NASA-TM-4451] p 3106 N93-27040
Analysis of local uniform grid refinement
[CWI-NM-R9211] p 3114 N93-27364

Linear stability analysis in the numerical solution of initial value problems
[TW-92-07] p 3118 N93-27916
Two counterexamples related to the Kreiss matrix theorem
[TW-92-08] p 3118 N93-27917
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084
Standard families of algorithms
[REPT-92-20] p 3104 N93-28389

NUMERICAL CONTROL
Development of a material processing plant for lunar soil p 3021 N93-26694
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009

NUMERICAL INTEGRATION
Kane's dynamics p 2926 N93-27211
Homenthalpic-flow approach for hypersonic inviscid non-equilibrium flows
[INRIA-RR-1652] p 2939 N93-28440

NUMERICAL STABILITY
Stability of parallel Volterra-Runge-Kutta methods
[CWI-NM-R9207] p 3106 N93-27304
A-stable diagonally implicit Runge-Kutta-Nystrom methods for parallel computers
[CWI-NM-R9208] p 3107 N93-27375
Two counterexamples related to the Kreiss matrix theorem
[TW-92-08] p 3118 N93-27917

NUMERICAL WEATHER FORECASTING
The representativeness of various clouds as tracers of the flow p 3075 N93-26992
Adjustment of TIROS operational vertical sounder data to a vertical view
[NOAA-TR-NESDIS-64] p 3071 N93-27059
Technical description LAM and OI: Limited area model and optimum interpolation analysis, second edition
[KNMI-TR-134A] p 3078 N93-27636
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949

NUTATION
Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198

O

O STARS
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787

OBJECT-ORIENTED PROGRAMMING
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
Virtual data structures
[RUU-CS-92-16] p 3097 N93-27506
XInPosse: Structural simulation for graphics hardware
[CWI-CS-R9208] p 3098 N93-27553

OBLIQUE SHOCK WAVES
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458

OBSERVATION
Ultraviolet Imaging Telescope (UIT) observations of galaxies p 3184 N93-26785

OBSTACLE AVOIDANCE
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179
Intelligent robots for planetary exploration and construction p 3054 N93-27980

OCCUPATION
Third Annual Women in Science and Technology Conference
[DE93-005271] p 3164 N93-26297

OCEAN BOTTOM
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244

OCEAN CURRENTS
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635
Mesoscale and large-scale variability in California current system and its interaction with both California current and California undercurrent flows
[AD-A262195] p 3080 N93-27867
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227

OCEAN DATA ACQUISITIONS SYSTEMS
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681

OCEAN SURFACE
A comparison of GMS low-level cloud motion winds with sea surface winds observed by ships over western part of the North Pacific Ocean p 3076 N93-26995
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635
Chemical and biological variability in the upper water column
[AD-A262207] p 3080 N93-27684
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method p 3074 N93-28249
Wave information studies of US coastlines: Verification of Pacific Ocean deepwater hindcast wave information
[AD-A262714] p 3081 N93-28396
Observations of turbulence in the surf zone
[AD-A262718] p 3081 N93-28397

OCEANOGRAPHY
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method p 3074 N93-28249
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

ODD-EVEN NUCLEI
Low-spin identical bands in neighboring odd-A and even-even nuclei
[DE93-008569] p 3132 N93-27486

OFFSHORE ENERGY SOURCES
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512

OFFSHORE PLATFORMS
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623

OIL EXPLORATION
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

OIL RECOVERY
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512

OILS
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236

ON-LINE SYSTEMS
A prototype climate information system
[AD-A261799] p 3075 N93-26630
The performance of cited references as an approach to information retrieval p 3166 N93-27503
Handbook for users
[AD-A260738] p 3166 N93-27605

ONBOARD DATA PROCESSING
Avionics systems architectures p 2919 N93-27169

OPERATING SYSTEMS (COMPUTERS)
Integrated Station Executive requirements and systems design approach
[NASA-CR-185708] p 2958 N93-27143
Consistency management for virtually indexed caches
[AD-A261952] p 3100 N93-27920
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222

OPERATIONS RESEARCH
Preprocessing and probing techniques for mixed integer programming problems
[MEMO-COSOR-92-26] p 3093 N93-27253
Local search in physical distribution management
[MEMO-COSOR-92-30] p 3163 N93-27384
A general model for maintenance of complex systems
[CWI-BS-R9201] p 3124 N93-27393

OPERATORS (MATHEMATICS)
Introduction to a behavioral approach of continuous-time systems
[MEMO-COSOR-92-05] p 3112 N93-27244
Introduction to a behavioral approach of continuous-time systems, part 2
[MEMO-COSOR-92-17] p 3112 N93-27245
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Operator algebra from fusion rules 2: Implementing apparent singularities
[NIKHEF-H/92-06] p 3155 N93-27307
Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
Measurability of operators
[W-9203] p 3125 N93-27930
The reflection operator in discrete event systems
[CS-9201] p 3110 N93-28067
The commutant lifting theorem for contractions on Krein spaces
[W-9107] p 3128 N93-28119
The commutant lifting theorem in the Krein space setting: A proof based on the coupling method
[W-9208] p 3128 N93-28125
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165

OPTICAL COMMUNICATION
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073

OPTICAL COMPUTERS
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689

OPTICAL CORRELATORS
Motion-sensitive optical correlator
[NASA-CASE-NPO-18769-1-CU] p 3148 N93-28133

OPTICAL COUPLING
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741

OPTICAL DENSITY
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436

OPTICAL DISKS
Optical disk technology Spaceflight Optical Disk Recorder (SODR) p 2964 N93-27710

OPTICAL EMISSION SPECTROSCOPY
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913

OPTICAL EQUIPMENT
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746

Workshop on Optical Properties of Mesoscopic Semiconductor Structures
[AD-A263024] p 3147 N93-27912
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451

OPTICAL FILTERS
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433

OPTICAL FLOW
Thermal management in gas cooled solid state laser disk amplifiers
[DE93-009241] p 3048 N93-28230

OPTICAL MATERIALS
Ceramics technical activities, 1992 (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173508] p 3003 N93-27400
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Optoelectronic Materials Center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology
[AD-A262377] p 3147 N93-27695
Enhanced chromophore polymeric NLO materials
[AD-A262258] p 3147 N93-28111
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A262704] p 3028 N93-28393
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403
Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433

OPTICAL MEASUREMENT
Near-IR imaging of moderate redshift galaxy clusters
p 3177 N93-26741
Investigation of systematic effects in atmospheric microthermal probe data
[AD-A262119] p 3074 N93-28185
Spectral infrared hemispherical reflectance measurements for LDEF tray clamps
p 3149 N93-28270
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307

OPTICAL MEASURING INSTRUMENTS
Status of the Fiber Optic Control System Integration (FOCSI) program
[NASA-TM-106151] p 3046 N93-28053
Optical interferometer testbed p 3060 N93-28168
Activities report of the Technische Dienst TNO-TU, Delft (Netherlands)
[ETN-93-93343] p 3219 N93-28201

OPTICAL PROPERTIES
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Workshop on Optical Properties of Mesoscopic Semiconductor Structures
[AD-A263024] p 3147 N93-27912
Contamination on LDEF: Sources, distribution, and history p 2998 N93-28272
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
Nonlinear optics in three level atomic systems
[AD-A262793] p 3148 N93-28376
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436

OPTICAL PUMPING
Nonlinear optics in three level atomic systems
[AD-A262793] p 3148 N93-28376

OPTICAL RADAR
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar
[NASA-CR-193160] p 3047 N93-27249
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132

OPTICAL REFLECTION
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
Estimating scene properties by analyzing color histograms with physics-based models
[AD-A262727] p 3111 N93-28399

OPTICAL RESONATORS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613
Diode-pumped laser altimeter
[NASA-CR-193166] p 3047 N93-27153

OPTICAL SWITCHING
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689

OPTICAL THICKNESS
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436

OPTICAL TRACKING
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395

OPTICAL TRANSFER FUNCTION
Self-Referenced Speckle Holography (SRSH) image reconstruction performance
[AD-A262487] p 3045 N93-27661

OPTICAL TRANSITION
Further time-resolved electron-beam characterizations with optical transition radiation
[DE93-007891] p 3131 N93-26625

OPTICAL WAVEGUIDES
Nonlinear Optics: Materials, Fundamentals, and Applications. Postdeadline papers
[AD-A261807] p 3147 N93-28123
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403

OPTIMAL CONTROL
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090
Balancing for nonlinear systems
[MEMO-1071] p 3121 N93-28156

OPTIMIZATION
Sensitivity calculations for a 2D, inviscid, supersonic forebody problem
[NASA-CR-191444] p 2928 N93-27004
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
Optimization of closed-loop tactics in ballistic defense-offense scenarios p 2925 N93-27209
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
Elicitation of expert knowledge and assessment of imprecise prior densities for lifetime distributions
[MEMO-COSOR-92-12] p 3123 N93-27231
Mixed H2/H infinity control in a stochastic framework
[MEMO-COSOR-92-13] p 3109 N93-27232
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
The best variety or an almost best one? A comparison of subset selection procedures
[MEMO-COSOR-92-22] p 3123 N93-27237
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Polynomial-time algorithms for single-machine bicriteria scheduling
[MEMO-COSOR-92-21] p 3093 N93-27248
Multidisciplinary design optimization: An emerging new engineering discipline
[NASA-TM-107761] p 2942 N93-27258
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
One-third-integrality in the metric polytope
[CWI-BS-R9209] p 3112 N93-27293
Optimal server assignment in the case of service times with monotone failure rates
[TW-92-04] p 3125 N93-27906
Speeding up parallelism detection for attribute grammars
[RUU-CS-92-18] p 3107 N93-27909
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
The Gribov problem in the frame of stochastic quantization
[SSCL-PREPRINT-740] p 3157 N93-28194
Computing modified Newton directions using a partial Cholesky factorization
[DE93-009584] p 3128 N93-28454

OPTOELECTRONIC DEVICES
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564
JSEP annual report, 11 January 1991 - 10 January 1993
[AD-A261948] p 3031 N93-27918
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A262704] p 3028 N93-28393
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403

ORBIT CALCULATION
Ofeq-2 orbit, attitude, and flight evaluation
p 2924 N93-27198
Detail design of Mars transfer orbit
p 2953 N93-28046

ORBIT TRANSFER VEHICLES
An analytical optimization of electric propulsion orbit transfer vehicles
[NASA-CR-191129] p 2985 N93-27060
Cryogenic transfer module for geosynchronous orbit
p 2920 N93-27176
Propulsion needs for lunar/Mars missions
p 2967 N93-27798

ORBITAL ASSEMBLY
Space teleoperations technology for Space Station evolution p 2970 N93-27823
An evolutionary construction facility for Space Station Freedom p 2971 N93-27839
Welding/brazing for Space Station repair
p 2971 N93-27840
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841
Automated assembly of large space structures
p 2971 N93-27842
Structures and materials technology discipline
p 2973 N93-27865

ORBITAL ELEMENTS
Detail design of Mars transfer orbit
p 2953 N93-28046

ORBITAL MECHANICS
Detail design of Mars transfer orbit
p 2953 N93-28046

ORBITAL RENDEZVOUS
Communications and tracking technology discipline
p 2972 N93-27856

ORBITS
Orbit-orbit branching rules p 3146 N93-27350

ORDER-DISORDER TRANSFORMATIONS
Phase transitions in the dual lattice in Potts model
[ROM1F-90-752] p 3152 N93-27700
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371

ORDNANCE
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207

OREGON
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611

ORGANIC COMPOUNDS
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423
Method for retarding oxidation of an organic substrate
[NASA-CASE-LEW-15306-2] p 3006 N93-28425

ORGANIC MATERIALS
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334

ORGANIC PHOSPHORUS COMPOUNDS
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622

ORGANIC SILICON COMPOUNDS
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309
ORGANIZATIONS
Evolving information systems: Beyond temporal information systems
[TR-92-04] p 3167 N93-27886
A meta model for update in evolving information systems
[TR-92-05] p 3167 N93-27887
Business reengineering in information intensive organizations
[ISBN-90-9005061-2] p 3164 N93-27937
ORGANOMETALLIC COMPOUNDS
Tailored organometallic polymers
[AD-A262446] p 3004 N93-27697
ORGANOMETALLIC POLYMERS
Tailored organometallic polymers
[AD-A262446] p 3004 N93-27697
ORIFICE FLOW
An analytical study of dilution jet mixing in a cylindrical duct
[NASA-TM-106181] p 2944 N93-27160
ORTHOGONAL FUNCTIONS
On transfinite abstract reduction systems
[CWI-CS-R9205] p 3117 N93-27550
ORTHOGONALITY
A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998
ORTHOPEDICS
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
OSCILLATING FLOW
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
OSCILLATION DAMPERS
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330
OSCILLATIONS
Galactic oscillations p 3188 N93-26808
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
OSCILLATORS
Mass spectra of the particle-antiparticle system with a Dirac oscillator interaction p 3146 N93-27351
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
A study of subterahertz HEMT monolithic oscillators p 3011 N93-27732
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
Quasi-optical antenna-mixer-array design for terahertz frequencies p 3015 N93-27752
A quasioptical resonant-tunneling-diode oscillator operating above 200 GHz p 3017 N93-27764
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774
Transformation of the Kepler problem p 3156 N93-28068
OSMOSIS
Structure and thermodynamics of the soft ion model electrolyte solutions
[AD-A262293] p 3136 N93-28246
OUTGASSING
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262
OUTLET FLOW
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136
OUTLIERS (STATISTICS)
Identification of significant outliers in time series data
[AD-A262437] p 3125 N93-27659
OVERPRESSURE
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
OXIDATION
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374
OXIDATION RESISTANCE
Exploration of multilayer concepts for oxidation protection of carbon-carbon composites
[AD-A262380] p 2991 N93-27653
Method for retarding oxidation of an organic substrate
[NASA-CASE-LEW-15306-2] p 3006 N93-28425
OXIDATION-REDUCTION REACTIONS
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647
Stability and reactivity of dimethylethoxysilane p 2997 N93-28258
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374
OXIDES
Experimental study of the electrolysis of silicate melts p 2997 N93-26679
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Guanidine based vehicle/binders for use with oxides, metals, and ceramics
[NASA-CASE-LEW-15314-2] p 3006 N93-28423
OXYGEN
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Non-adiabatic curve crossings in dissociative electron attachment of condensed O2
[AD-A262129] p 2995 N93-28186
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
OXYGEN ATOMS
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260
A study of the UV and VUV degradation of FEP p 3007 N93-28261
LDEF fiber-composite materials characterization p 2992 N93-28264
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel p 2992 N93-28265
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266
An XPS study of space-exposed polyimide film p 3007 N93-28267
Surface characterization of selected LDEF tray clamps p 3001 N93-28271
Optical characterization of LDEF contaminant film p 3149 N93-28274
LDEF thermal control coatings post-flight analysis p 3008 N93-28278
Atomic oxygen effects on LDEF experiment AO171 p 3138 N93-28281
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF p 3008 N93-28282
Second LDEF Post-Retrieval Symposium interim results of experiment A0034 p 3008 N93-28283
The interaction of atomic oxygen with copper: An XPS, AES, XRD, optical transmission, and stylus profilometry study p 3149 N93-28284
Method for retarding oxidation of an organic substrate
[NASA-CASE-LEW-15306-2] p 3006 N93-28425
OXYGEN ISOTOPES
Oxygen isotopes implanted in the LDEF spacecraft p 2997 N93-28256
OXYGEN PRODUCTION
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-26675
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Oxygen and iron production by electrolytic smelting of lunar soil p 2997 N93-26678
Experimental study of the electrolysis of silicate melts p 2997 N93-26679
Lunar mining of oxygen using fluorine p 2997 N93-26680
Oxygen production on Mars and the Moon p 3021 N93-26683
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
Development of a material processing plant for lunar soil p 3021 N93-26694
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
An integrated database with system optimization and design features p 3168 N93-26697
Comparison of portable crewmember protective breathing equipment (CPBE) designs
[DOT/FAA/AM-93/6] p 3086 N93-27121
Space Station propulsion integrated propulsion test article p 2970 N93-27818
SPE (tm) electrolyzers for space propulsion p 2970 N93-27819
Electrical power integration for lunar operations p 2988 N93-27966
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
Options for a lunar base surface architecture p 3214 N93-27974
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
OXYGEN SUPPLY EQUIPMENT
Comparison of portable crewmember protective breathing equipment (CPBE) designs
[DOT/FAA/AM-93/6] p 3086 N93-27121
Evolution of Space Station EMU PLSS technology recommendations p 2966 N93-27790
OXYGEN-HYDROCARBON ROCKET ENGINES
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535
Propulsion technology discipline p 2973 N93-27863
OZONE
Derivation of total ozone amount from NOAA/TOVS data p 3071 N93-26997
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
OZONE DEPLETION
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519

P

P WAVES
Analysis of seismograms from nuclear explosions of known yield at Degelen Mountain and Konystan in east Kazakhstan, USSR
[AWE-O-2/92] p 3073 N93-27703
P-I-N JUNCTIONS
Study of the Staebler-Wronski degradation effect in a-Si:H based p-i-n solar cell
[NASA-CR-193076] p 3066 N93-28406
P-N JUNCTIONS
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056
PACIFIC ISLANDS
Atoll Research Bulletin numbers 355-364: 40th anniversary issue
[PB93-169654] p 3062 N93-27421
PACIFIC OCEAN
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method p 3074 N93-28249
Wave information studies of US coastlines: Verification of Pacific Ocean deepwater hindcast wave information
[AD-A262714] p 3081 N93-28396
PACKAGES
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213

PACKAGING
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
PACKET SWITCHING
Fault-tolerant onboard digital information switching and routing for communications satellites
[NASA-TM-4471] p 2956 N93-26895
PAINTS
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
PAIR PRODUCTION
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298
PALAPA SATELLITES
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659
PANEL FLUTTER
Hypersonic panel flutter in a rarefied atmosphere
[NASA-CR-4514] p 2929 N93-27084
PANELS
Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305
PARABOLIC ANTENNAS
Wide-angle radiation pattern calculation of paraboloidal reflector antennas: A comparative study
[EUT-91-E-252] p 3026 N93-27226
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
PARABOLIC REFLECTORS
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841
PARALLEL COMPUTERS
A-stable diagonally implicit Runge-Kutta-Nystrom methods for parallel computers
[CWI-NM-R9208] p 3107 N93-27375
PARALLEL FLOW
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
PARALLEL PROCESSING (COMPUTERS)
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
Neural networks for calibration tomography
[NASA-TM-106164] p 3045 N93-26906
Parallel solution of high-order numerical schemes for solving incompressible flows
[NASA-TM-4451] p 3106 N93-27040
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Rutger's CAM2000 chip architecture
[NASA-CR-193078] p 3151 N93-27094
USRA/RIACS
[NASA-CR-193216] p 3092 N93-27224
Formal specification of MANIFOLD: A preliminary study
[CWI-CS-R9215] p 3093 N93-27254
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling
[MEME-COSOR-92-08] p 3124 N93-27277
Complexity of scheduling multiprocessor tasks with prespecified processor allocations
[MEMO-COSOR-92-32] p 3106 N93-27361
Verification of parameterised synchronous concurrent algorithms with OBJ3: The pixel planes architecture revisited
[CWI-CS-R9225] p 3095 N93-27378
Specification of MANIFOLD, version 1.0
[CWI-CS-R9220] p 3095 N93-27388
Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539
Efficient grid based techniques for solving the Weighted Region Least Cost Path problem on multicomputers
[AD-A262153] p 3107 N93-27548
Massively parallel searching for better algorithms
[DE93-009501] p 3107 N93-27623
The impact of communication style on machine resource usage for the iWarp parallel processor
[AD-A262425] p 3107 N93-27657
Random-like interconnects, fault tolerance and grain-size studies for optoelectronic computing
[AD-A262360] p 3107 N93-27689
Electronic neural networks p 2964 N93-27711
Embedded multiprocessor technology for VHSIC insertion p 2964 N93-27713
Automatic management of parallel and distributed system resources p 2965 N93-27715
Some experiments in transforming towards parallel executability
[TR-92-08] p 3107 N93-27903
Efficient communication for parallel computing
[AD-A261966] p 3108 N93-27951
On parallel data structuring: A parallel priority queue
[RUU-CS-92-19] p 3108 N93-28061
Workform processing: A new paradigm for fault-tolerant distributed parallel computation
[AD-A262087] p 3108 N93-28222
Sparse matrix algorithms on distributed memory multiprocessors
[DE93-009368] p 3103 N93-28231
An integrated environment for the development of scientific and engineering applications
[AD-A262277] p 3103 N93-28239
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system
[AD-A262712] p 3108 N93-28394
Digital parallel processor array for optimum path planning
[NASA-CASE-NPO-18727-1-CU] p 3108 N93-28427
A programming tool for detailed analysis of FORTRAN operation counts
[DE93-009606] p 3105 N93-28455
PARALLEL PROGRAMMING
Parallel programming with PCN
[DE93-008087] p 3105 N93-26627
Parallel computing strategies for block multigrid implicit solution of the Euler equation p 2922 N93-27190
Formal specification of MANIFOLD: A preliminary study
[CWI-CS-R9215] p 3093 N93-27254
Speeding up parallelism detection for attribute grammars
[RUU-CS-92-18] p 3107 N93-27909
PARAMETER IDENTIFICATION
Identification for the control of MIMO industrial processes
[EUT-91-E-256] p 3010 N93-27229
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
Parameter identification for nonlinear aerodynamic systems
[NASA-CR-193072] p 2930 N93-27282
The identification of analytical device models
[ISBN-90-6275-764-2/CIP] p 3100 N93-27874
Using pseudo Kalman-filters in the presence of constraints application to sensing behaviors
[INRIA-RR-1669] p 3122 N93-28442
A Kolmogorov-Smirnov type test for ergodic diffusion processes
[INRIA-RR-1696] p 3122 N93-28447
PARAMETRIC AMPLIFIERS
Squeezed states of damped oscillator chain p 3143 N93-27329
PARSING ALGORITHMS
Left-corner and head-corner chart parsing
[MEMO-INF-92-55] p 3096 N93-27489
The Grammar Workbench: A first step towards Lingware engineering
[TR-92-06] p 3100 N93-27902
PARTIAL DIFFERENTIAL EQUATIONS
An invitation to structured (meta)population models
[CWI-AM-R9113] p 3124 N93-27294
Moving-finite-element solution of time-dependent partial differential equations in two space dimensions
[CWI-NM-R9206] p 3113 N93-27303
Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB
[CWI-NM-R9213] p 3031 N93-27367
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
Wavelet local extrema applied to image processing
[AD-A262362] p 3118 N93-27691
Non-isospectral extension of the chiral model and its geometry
[SSCL-PREPRINT-735] p 3128 N93-28101
Continuous symmetries of discrete equations
[SSCL-PREPRINT-738] p 3121 N93-28163
PARTICLE ACCELERATOR TARGETS
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
PARTICLE ACCELERATORS
Semiweak production of a top quark accompanied by a bottom quark and 2 jets at hadron colliders
[NIKHEF-H/91-27] p 3132 N93-27508
Analog signal isolation techniques
[DE93-008059] p 3147 N93-27524
Studies of high energy phenomena using muons
[DE93-009373] p 3140 N93-28367
PARTICLE BEAMS
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095
PARTICLE COLLISIONS
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Semiweak production of a top quark accompanied by a bottom quark and 2 jets at hadron colliders
[NIKHEF-H/91-27] p 3132 N93-27508
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
PARTICLE INTERACTIONS
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential p 3141 N93-27314
Galilean covariant harmonic oscillator p 3145 N93-27341
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097
The improvement of hadronic matrix elements in lattice QCD
[SSCL-PREPRINT-737] p 3157 N93-28162
Localized solutions of N + 1 dimensional evolution equations
[SSCL-PREPRINT-753] p 3157 N93-28210
Leading non-logarithmic contribution to the electropenguin diagram and phenomenology of kaon decays
[SSCL-PREPRINT-745] p 3137 N93-28388
Experimental challenges at future hadron colliders (lectures for the 1992 Saint Croix Summer School)
[DE93-008613] p 3140 N93-28429
PARTICLE MASS
Heavy quark masses
[SSCL-PREPRINT-772] p 3133 N93-27699
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097
Physical parameters of the intermediate vector boson in the standard electroweak theory and the t-quark mass
[SSCL-PREPRINT-757] p 3135 N93-28142
PARTICLE MOTION
Spinning particles in Schwarzschild space-time
[NIKHEF-H/92-09] p 3156 N93-27511
PARTICLE PRODUCTION
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
Time evolution of the quark-gluon plasma
[DE93-008703] p 3149 N93-27620
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356
Studies of high energy phenomena using muons
[DE93-009373] p 3140 N93-28367
PARTICLE SIZE DISTRIBUTION
Prediction of propellant behavior in spinning flow of a space motor p 2923 N93-27193
PARTICLE SPIN
Phase space localization for anti-de Sitter quantum mechanics and its zero curvature limit p 3144 N93-27333
Spinning particles in Schwarzschild space-time
[NIKHEF-H/92-09] p 3156 N93-27511
PARTICLE THEORY
Summary talk --- particle physics
[SSCL-PREPRINT-724] p 3134 N93-28097
Physical parameters of the intermediate vector boson in the standard electroweak theory and the t-quark mass
[SSCL-PREPRINT-757] p 3135 N93-28142
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197
PARTICLE TRAJECTORIES
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry
[NASA-CR-191097] p 2940 N93-27267

Symmetries and motions in manifolds
[NIKHEF-H/92-08] p 3128 N93-27510
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197

PARTICLES
Alternative descriptions of wave and particle aspects of the harmonic oscillator p 3142 N93-27317
Mass spectra of the particle-antiparticle system with a Dirac oscillator interaction p 3146 N93-27351

PARTICULATE REINFORCED COMPOSITES
Fracture micromechanics of ceramic composites p 2920 N93-27172

PARTICULATES
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457

PARTITIONS (MATHEMATICS)
On partitions into unequal squares and related problems
[MEMO-1055] p 3120 N93-28003

PASCAL (PROGRAMMING LANGUAGE)
Macro function language hardware manual
[AD-A262109] p 3103 N93-28182

PATTERN RECOGNITION
Sparse arrangements and the number of views of polyhedral scenes
[RUU-CS-92-24] p 3120 N93-28065
Feature modelling and conversion: Key concepts to concurrent engineering
[REPT-92-44] p 3103 N93-28220
Robust and fast computation of edge characteristics in image sequences
[INRIA-RR-1689] p 3105 N93-28446

PATTERN REGISTRATION
Iterative point matching for registration of free-form curves
[INRIA-RR-1658] p 3122 N93-28441

PAYLOAD CONTROL
A magnetic isolation and pointing system for the astrometric telescope facility p 2960 N93-27563

PAYLOADS
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
ROSETTA: The ESA sample return mission p 2953 N93-28049

PEBBLE BED REACTORS
Space Nuclear Thermal Propulsion (SNTP) Air Force facility p 2955 N93-26968

PECULIAR GALAXIES
The galaxy velocity field and CDM models p 3176 N93-26737

PELTIER EFFECTS
Spinning-current method for offset reduction in silicon Hall plates
[ISBN-90-6275-780-4/CIP] p 3152 N93-27873

PENETRANTS
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640

PERFORMANCE PREDICTION
Solar array electrical performance assessment for Space Station Freedom
[NASA-TM-106161] p 2984 N93-27039
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
LDEF materials data analysis: Representative examples p 2998 N93-28285
MASTRE trajectory code update to automate flight trajectory design, performance predictions, and vehicle sizing for support of shuttle and shuttle derived vehicles: Programmers manual
[NASA-CR-192558] p 2954 N93-28321

PERFORMANCE TESTS
Solar array electrical performance assessment for Space Station Freedom
[NASA-TM-106161] p 2984 N93-27039
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz p 3014 N93-27749
Development and evaluation of a cleanable high efficiency steel filter
[DE93-008024] p 3070 N93-28419

PERIODIC FUNCTIONS
Introduction to a behavioral approach of continuous-time systems
[MEMO-COSOR-92-05] p 3112 N93-27244
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883

PERIODIC VARIATIONS
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

PERMANENT MAGNETS
High efficiency magnetic bearings p 2962 N93-27574

PERMEABILITY
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
Free boundary problems in fresh-salt groundwater flow
[REPT-92-45] p 3041 N93-27882
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382

PERMUTATIONS
On the treewidth and pathwidth of permutation graphs
[RUU-CS-92-13] p 3113 N93-27305
Treewidth and pathwidth of permutation graphs
[RUU-CS-92-30] p 3101 N93-28093

PERSONAL COMPUTERS
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414
Case study of technology use in adult literacy programs
[PB93-163905] p 3161 N93-27415
Generic Application Layer for PC-controlled VME measuring systems (GAL PC-VME)
[OEFZS-4630] p 3103 N93-28204

PERSONNEL MANAGEMENT
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056

PERTURBATION
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284

PERTURBATION THEORY
The galaxy velocity field and CDM models p 3176 N93-26737
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
A singular perturbation theorem for evolution equations and time-scale arguments for structured population models
[CWI-AM-R9201] p 3112 N93-27295
The method of minimal normal forms --- for solving nonlinear differential equations
[DE93-008060] p 3118 N93-27627
Influence of stochastic contact resistance on coupling losses
[MEMO-1067] p 3028 N93-28076
Recent progress in lattice QCD
[DE93-006827] p 3157 N93-28312
Ordering and displacive transformations in Ni-Al alloys
[DE93-009553] p 3001 N93-28371

PESTICIDES
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
Regenerable biocide delivery unit, volume 2
[NASA-CR-185701-VOL-2] p 3082 N93-27360

PETN
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296

PETROGRAPHY
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

PHASE DIAGRAMS
Thermodynamic analysis of the binary systems Mo-V, Ni-V, Si-V, and Ti-V
[PB93-173185] p 3155 N93-26637

PHASE MODULATION
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354

PHASE SEPARATION (MATERIALS)
Recovery and separation of precious metals from space p 3001 N93-26686
Phase separation and superconductivity in the U equals infinity limit of the extended multiband Hubbard model
[SSCL-PREPRINT-763] p 3151 N93-27580
Mean field phase diagram of two band tJ model for CuO2 layers
[SSCL-PREPRINT-764] p 3151 N93-27581
Superconductivity, phase separation and charge transfer instability in the U = infinity limit of the three band model of the CuO2 planes
[SSCL-PREPRINT-749] p 3153 N93-28140
Phase separation and superconductivity in the Kondo-like spin-hole coupled model
[SSCL-PREPRINT-759] p 3153 N93-28144

PHASE SHIFT
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910

PHASE TRANSFORMATIONS
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
Electronic structure theory of alloy phase stability
[DE93-009547] p 3000 N93-28232

PHASE VELOCITY
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758

PHASE-SPACE INTEGRAL
Harmonic oscillator states in aberration optics p 3143 N93-27331
Phase space localization for anti-de Sitter quantum mechanics and its zero curvature limit p 3144 N93-27333
The algebra of supertraces for 2+1 super de Sitter gravity p 3144 N93-27337

PHASED ARRAYS
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265

PHENOMENOLOGY
Recent progress in lattice QCD
[DE93-006827] p 3157 N93-28312

PHILIPPINES
Data communications service by VSAT network in the Philippines p 3024 N93-26655

PHONEMES
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1
[PB93-173938] p 3026 N93-27403

PHONETICS
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1
[PB93-173938] p 3026 N93-27403

PHONONS
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346

PHOSPHATES
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114

PHOTOCHEMICAL REACTIONS
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359
Trend survey of the global environment adaptation type industrial technology
[DE93-781441] p 3071 N93-28434

PHOTOCONDUCTIVITY
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309

PHOTODECOMPOSITION
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052

PHOTODISSOCIATION
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537

PHOTOELECTRIC EFFECT
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298
PHOTOELECTRIC EMISSION
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
PHOTOELECTRON SPECTROSCOPY
An XPS study of space-exposed polyimide film
p 3007 N93-28267
PHOTOGRAPHS
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-56
[NASA-TM-107560] p 2956 N93-27538
PHOTOIONIZATION
The reionization of the universe: The feedback of galaxy formation on the intergalactic medium
p 3182 N93-26771
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772
Long slit spectroscopy of NGC 5506
p 3198 N93-26861
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
Excitation of atoms and molecules in collisions with highly charged ions
[DE93-007306] p 3132 N93-27520
Quasiclassical approach to ionization of atoms by strong laser pulses: The comparison with the simpleman's models and Newtonian dynamics
[DE93-008738] p 3137 N93-28463
PHOTOLITHOGRAPHY
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
PHOTOLUMINESCENCE
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
PHOTOLYSIS
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction
[DE93-007735] p 3131 N93-26614
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359
PHOTOMAPPING
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612
PHOTOMETERS
A broadband THz receiver for low background space applications p 3020 N93-27782
PHOTOMETRY
Starburst ages in HII galaxies p 3183 N93-26777
Declining rotation curves in interacting galaxies
p 3192 N93-26829
PHOTON BEAMS
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
PHOTON DENSITY
Using harmonic oscillators to determine the spot size of Hermite-Gaussian laser beams p 3049 N93-27328
PHOTONS
Distribution of photons in squeezed polymode light
p 3143 N93-27325
Two photon annihilation operators and squeezed vacuum p 3143 N93-27326
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
PHOTONUCLEAR REACTIONS
Radiation interaction and detection principles
[DE93-005302] p 3136 N93-28298
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
Photoerosion in astrophysical environments
p 3205 N93-28450
PHOTOPRODUCTION
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
PHOTOVOLTAIC CELLS
A photovoltaic catenary-tent array for the Martian surface
[NASA-CR-191144] p 2976 N93-26703
Solar array electrical performance assessment for Space Station Freedom
[NASA-TM-106161] p 2984 N93-27039
PHOTOVOLTAIC CONVERSION
A PWM current-source inverter for interconnection between a photovoltaic array and the utility line
[EUT-91-E-253] p 3065 N93-27227
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435
PHYSICAL FACTORS
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
PHYSIOLOGICAL DEFENSES
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199
PHYSIOLOGICAL EFFECTS
Growth factor involvement in tension-induced skeletal muscle growth
[NASA-CR-193023] p 3083 N93-27113
Variations of time-to-incapacitation and carboxyhemoglobin values in rats exposed to two carbon monoxide concentrations
[DOT/FAA/AM-93/7] p 3082 N93-27152
Variations in time-to-incapacitation and blood cyanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
PHYSIOLOGICAL FACTORS
The cumulative formulation of (physiologically) structured population models
[CWI-AM-R9205] p 3124 N93-27298
Artificial gravity experiment satellites
p 2949 N93-28018
PHYSIOLOGICAL RESPONSES
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
Secondary injury factors and preventative treatment
[PB93-176014] p 3084 N93-27409
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
PHYTOPLANKTON
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943
Chemical and biological variability in the upper water column
[AD-A262207] p 3080 N93-27684
PICOSECOND PULSES
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas
p 3011 N93-27728
PIEZOELECTRIC CERAMICS
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305
PIEZOELECTRICITY
An acoustic charge transport imager for high definition television applications
[NASA-CR-193081] p 3030 N93-26701
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
NMR and optical studies of piezoelectric polymers
[DE93-010967] p 3006 N93-28361
PIGMENTS
Chemical and biological variability in the upper water column
[AD-A262207] p 3080 N93-27684
PILOT ERROR
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
PILOT PERFORMANCE
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851
PILOT TRAINING
Autogenic-feedback training improves pilot performance during emergency flying conditions
[NASA-TM-104005] p 2940 N93-27076
PINNING
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
PION BEAMS
Measuring pion beta decay with high-energy pion beams
[DE93-007347] p 3132 N93-27521
PIONS
Measuring pion beta decay with high-energy pion beams
[DE93-007347] p 3132 N93-27521
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
PIPE FLOW
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154
Steady heat transfer in a tube with turbulent flow
[OEFZS-4642] p 3042 N93-28205
PIPES (TUBES)
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
PITCH (INCLINATION)
New adaptive controllers for aircraft
p 2921 N93-27180
PITCHING MOMENTS
Analysis of wind-tunnel data for elliptic cross-sectioned forebodies at Mach numbers 0.4 to 5.0
p 2927 N93-27221
PITTING
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
PITUITARY GLAND
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415
PITUITARY HORMONES
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415
PLANAR STRUCTURES
Finding k disjoint paths in a directed planar graph
[CWI-BS-R9206] p 3095 N93-27379
The 2x2 quasi-optical power combiner array at 20 GHz p 3011 N93-27730
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
PLANE STRESS
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
PLANE WAVES
Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296
PLANETARY ENVIRONMENTS
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-192883] p 3206 N93-26674
PLANETARY EVOLUTION
Regional tectonic analysis of Venus equatorial highlands and comparison with Earth-based Magellan radar images
[NASA-CR-192996] p 3210 N93-27164
PLANETARY GEOLOGY
Regional tectonic analysis of Venus equatorial highlands and comparison with Earth-based Magellan radar images
[NASA-CR-192996] p 3210 N93-27164
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604
PLANETARY LANDING
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
PLANETARY MAPPING
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497
PLANETARY MASS
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
PLANETARY NEBULAE
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
PLANETOLOGY
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972

PLANT DESIGN
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332
PLASMA CONTROL
Plasma confinement theory and transport simulation
[DE93-009755] p 3149 N93-26617
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349
PLASMA CURRENTS
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
PLASMA DENSITY
Electron cyclotron thruster new modeling results preparation for initial experiments p 2983 N93-26982
PLASMA DIAGNOSTICS
Further time-resolved electron-beam characterizations with optical transition radiation
[DE93-007891] p 3131 N93-26625
Overview of charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-007898] p 3131 N93-26626
Coherent systems in the terahertz frequency range: Elements, operation, and examples
p 3011 N93-27727
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
Progress in optical diagnostic development for the electro-thermal chemical program
[DE93-009452] p 2997 N93-28452
PLASMA DIFFUSION
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
PLASMA DISPLAY DEVICES
Space Station displays and controls technology evolution p 2964 N93-27712
PLASMA DRIFT
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
PLASMA DYNAMICS
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
Modelling of plasmaspheric flows
p 3150 N93-28412
PLASMA ENGINES
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
PLASMA HEATING
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane
p 3204 N93-26894
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
PLASMA INTERACTIONS
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 1
[AD-A262783] p 2974 N93-28401
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 2
[AD-A262784] p 2974 N93-28402
PLASMA JETS
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913
PLASMA LAYERS
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144
PLASMA PROPULSION
NEP technology: FY 1992 milestones (NASA LeRC)
p 2983 N93-26977
JPL nuclear electric propulsion task
p 2983 N93-26980
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
PLASMA SHEATHS
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 1
[AD-A262783] p 2974 N93-28401
PLASMA SPRAYING
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
PLASMA WAVES
Analysis of magnetometer data/wave signals in the Earth's magnetosphere
[NASA-CR-193169] p 3072 N93-27154
PLASMAS (PHYSICS)
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
PLASMASPHERE
Modelling of plasmaspheric flows
p 3150 N93-28412
PLASTIC DEFORMATION
Plastic deformation of granular materials
[AD-A262449] p 3058 N93-27826
PLASTIC PROPELLANTS
Regression rate mechanism in a solid fuel ramjet
p 2922 N93-27185
PLASTIC PROPERTIES
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Backward can extrusion and materials behaviour
[ISBN-9-03-860032-1] p 2998 N93-27374
Modeling the behavior of materials
[DE93-010483] p 3060 N93-28161
PLASTICS
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
PLATES (STRUCTURAL MEMBERS)
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Spinning-current method for offset reduction in silicon Hall plates
[ISBN-90-6275-780-4/CIP] p 3152 N93-27873
Mixed-mode fracture of concrete: An experimental approach
[ISBN-90-9005-047-7] p 3058 N93-27879
PLUMES
NTR plume modeling p 2978 N93-26929
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460
PLY ORIENTATION
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
POINT DEFECTS
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy
[AD-A263031] p 3152 N93-27922
The onset of vortex turbulence p 2938 N93-28251
POINTING CONTROL SYSTEMS
A magnetic isolation and pointing system for the astrometric telescope facility p 2960 N93-27563
An electromagnetically levitated two-axis gimbaless pointing mechanism p 2961 N93-27565
Superconducting linear actuator p 2962 N93-27577
POISSON EQUATION
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955
POISSON RATIO
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
POLAR CAPS
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
POLAR REGIONS
Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0)
[AD-A262794] p 3081 N93-28377
POLARIMETRY
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
POLARITY
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352
POLARIZATION (CHARGE SEPARATION)
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216
POLARIZATION (WAVES)
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
POLAROGRAPHY
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
POLARONS
Squeezing phenomena in interacting electron-phonon systems
[SSCL-PREPRINT-727] p 3134 N93-28100
POLICIES
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
White paper on science operations
p 3165 N93-27047
POLLUTION CONTROL
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
[NASA-CR-192988] p 3068 N93-27163
Sustainable agriculture and the environment in the humid tropics
[PB93-173920] p 3068 N93-27402
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
Technological options for acid rain control
[PB93-173094] p 3069 N93-27527
MHD can clean up the environment
[DE93-008015] p 3070 N93-27617
POLLUTION MONITORING
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
POLLUTION TRANSPORT
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407
POLYAMIDE RESINS
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942
POLYCRYSTALS
Low cycle fatigue behavior of polycrystalline NiAl at 300 and 1000 K
[NASA-TM-105987] p 2998 N93-26898

Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219

POLYETHYLENES
Kinetics and microscopic processes of long term fracture in polyethylene piping materials
[PB93-167146] p 3057 N93-27418
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260

POLYHEDRONS
Sparse arrangements and the number of views of polyhedral scenes
[RUU-CS-92-24] p 3120 N93-28065

POLYMER MATRIX COMPOSITES
Dynamic characteristics of specialty composite structures with embedded damping layers
[NASA-TM-106165] p 2989 N93-26705
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262
LDEF fiber-composite materials characterization p 2992 N93-28264

POLYMERIC FILMS
LDEF polymeric materials: 10 months versus 5.8 years of exposure p 3007 N93-28259
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF p 3008 N93-28282
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433

POLYMERIZATION
Lareg area solar cells from lunar materials p 3066 N93-26688
Silazine to silica p 2997 N93-28257

POLYMERS
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Enhanced chromophore polymeric NLO materials
[AD-A262258] p 3147 N93-28111
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334

POLYMETHYL METHACRYLATE
Orientational pair correlation, polar order parameter and temporal stability in the second harmonic generation of amorphous polymers
[AD-A262013] p 3004 N93-27669
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382

POLYNOMIALS
Polynomial-time algorithms for single-machine bicriteria scheduling
[MEMO-COSOR-92-21] p 3093 N93-27248
Characteristic sets in commutative algebra: An overview
[MEMO-COSOR-92-24] p 3112 N93-27281
Termination of term writing by interpretation
[RUU-CS-92-14] p 3114 N93-27381
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539
On the fermionic Heisenberg group and its Q-representations
[NIKHEF-H/92-11] p 3117 N93-27542
Polynomial systems with centers and limit cycles
[REPT-92-38] p 3118 N93-27869
An algorithm for determining the approximation orders of multivariate periodic spline spaces
[MEMO-1061] p 3101 N93-28012

POLYSACCHARIDES
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

POLYTOPES
One-third-integrality in the metric polytope
[CWI-BS-R9209] p 3112 N93-27293

POLYVINYL ALCOHOL
Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431

PONTRYAGIN PRINCIPLE
Vertical landing on an asteroid p 2924 N93-27202

POPULATION THEORY
An invitation to structured (meta)population models
[CWI-AM-R9113] p 3124 N93-27294
A singular perturbation theorem for evolution equations and time-scale arguments for structured population models
[CWI-AM-R9201] p 3112 N93-27295
The saturating contact rate in marriage- and epidemic models
[CWI-AM-R9203] p 3124 N93-27297
The cumulative formulation of (physiologically) structured population models
[CWI-AM-R9205] p 3124 N93-27298

POPULATIONS
Spacewatch discovery of near-Earth asteroids p 3205 N93-26691
Near-Earth asteroids: Observer alert network and physical observations p 3168 N93-26699
The Lyman alpha emission of starburst galaxies p 3184 N93-26784
The galactic center stellar population in the near infrared p 3204 N93-28080

POROSITY
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366

POROUS MATERIALS
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292
Selectivity and permeability of microporous block copolymer membranes
[AD-A263189] p 3006 N93-28382

PORTABLE LIFE SUPPORT SYSTEMS
Comparison of portable crewmember protective breathing equipment (CPBE) designs
[DOT/FAA/AM-93/6] p 3086 N93-27121
Evolution of Space Station EMU PLSS technology recommendations p 2966 N93-27790

POSITION (LOCATION)
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
Implicit point location in arrangements of line segments, with an application to motion planning
[RUU-CS-92-15] p 3116 N93-27505

POSITION ERRORS
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178

POSITIONING DEVICES (MACHINERY)
Intelligent robots for planetary exploration and construction p 3054 N93-27980

POSITRONIUM
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335

POSITRONS
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335

POSTFLIGHT ANALYSIS
LDEF thermal control coatings post-flight analysis p 3008 N93-28278

POTABLE WATER
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

POTASSIUM
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985

POTENTIAL
Do galactic potential wells depend on their environment? p 3177 N93-26739

POTENTIAL ENERGY
Energy and chemical change
[AD-A262359] p 3133 N93-27648

POTENTIAL FIELDS
Do galactic potential wells depend on their environment? p 3177 N93-26739

POTENTIAL FLOW
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465

POTENTIAL THEORY
Phase of the quantum harmonic oscillator with applications to optical polarization p 3142 N93-27322

POWDER (PARTICLES)
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236

POWER AMPLIFIERS
A conventional point of view on active magnetic bearings p 2961 N93-27568
Thermal management in gas cooled solid state laser disk amplifiers
[DE93-009241] p 3048 N93-28230

POWER CONVERTERS
Advanced modular power supplies for Space Station Freedom p 2969 N93-27811

POWER SPECTRA
Mixed spectra and rotational symmetry
[W-9212] p 3121 N93-28139

POWER TRANSMISSION
Choice of antenna geometry for microwave power transmission from solar power satellites p 2988 N93-27987

PREBURNERS
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223

PRECIPITATION (CHEMISTRY)
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877

PRECIPITATION (METEOROLOGY)
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949

PREDICTION ANALYSIS TECHNIQUES
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Considerations concerning fatigue life of metal matrix composites
[NASA-TM-106144] p 3056 N93-27009
An analysis of gear fault detection methods as applied to pitting fatigue failure data
[NASA-TM-105950] p 3049 N93-27074
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
Three-dimensional water droplet trajectory code validation using an ECS inlet geometry
[NASA-CR-191097] p 2940 N93-27267
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

PREDICTIONS
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352

PREDICTOR-CORRECTOR METHODS
Note on the performance of direct and indirect Runge-Kutta-Nystroem methods
[CWI-NM-R9214] p 3120 N93-28082
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084

PREFORMS
Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457

PREPROCESSING
Preprocessing and probing techniques for mixed integer programming problems
[MEMO-COSOR-92-26] p 3093 N93-27253

PRESIDENTIAL REPORTS
Aeronautics and space report of the President: Fiscal year 1992 activities p 3219 N93-27041

PRESSURE DISTRIBUTION
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220

Flow prediction over a transport multi-element high-lift system and comparison with flight measurements
p 2934 N93-27448
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450
Towards industrial-strength Navier-Stokes codes
p 2938 N93-27468
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955

PRESSURE EFFECTS
Testing the pressure-confined Ly alpha cloud model
p 3181 N93-26764
X ray and gamma ray spectroscopy of solids under pressure
[DE93-010966] p 2996 N93-28360

PRESSURE GRADIENTS
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements
p 2934 N93-27448

PRESSURE MEASUREMENT
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Analysis of fluctuating static pressure measurements in a large high Reynolds number transonic cryogenic wind tunnel
[NASA-TM-108722] p 2947 N93-27142

PRESSURE OSCILLATIONS
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679

PRESSURE REDUCTION
Mixing and transient interface condensation of a liquid hydrogen tank
[NASA-TM-106201] p 3042 N93-28252

PRESSURE SENSORS
Power assist EVA glove development
p 3086 N93-27850

PRESSURE VESSELS
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059

PRINTED CIRCUITS
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

PRIORITIES
Priority inheritance in real-time micro kernels
[MEMO-INF-92-52] p 3095 N93-27387
Approximate analysis of an M/G/1 priority queue with priority changes due to impatience
[CWI-BS-R9202] p 3127 N93-27606

PROBABILITY DENSITY FUNCTIONS
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Elicitation of expert knowledge and assessment of imprecise prior densities for lifetime distributions
[MEMO-COSOR-92-12] p 3123 N93-27231
On Bernoulli experiments with imprecise prior probabilities
[MEMO-COSOR-92-19] p 3123 N93-27236
Maximum imprecision related to intervals of measures and Bayesian inference with conjugate imprecise prior densities
[MEMO-COSOR-92-07] p 3124 N93-27276
Using harmonic oscillators to determine the spot size of Hermite-Gaussian laser beams p 3049 N93-27328

PROBABILITY DISTRIBUTION FUNCTIONS
Statistical inference procedures for probability selection functions in long-term monitoring programs
[PB93-163012] p 3123 N93-26631
The best variety or an almost best one? A comparison of subset selection procedures
[MEMO-COSOR-92-22] p 3123 N93-27237

PROBABILITY THEORY
Probabilistic structural analysis for nuclear thermal propulsion p 2979 N93-26931
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
On Bernoulli experiments with imprecise prior probabilities
[MEMO-COSOR-92-19] p 3123 N93-27236
Maximum imprecision related to intervals of measures and Bayesian inference with conjugate imprecise prior densities
[MEMO-COSOR-92-07] p 3124 N93-27276
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling
[MEME-COSOR-92-08] p 3124 N93-27277
An invitation to structured (meta)population models
[CWI-AM-R9113] p 3124 N93-27294
The saturating contact rate in marriage- and epidemic models
[CWI-AM-R9203] p 3124 N93-27297
A recurrence type characterization of mu-exponential ergodicity for Markov processes
[TW-92-03] p 3125 N93-27905
Measurability of operators
[W-9203] p 3125 N93-27930
Some limit theorems in log density
[W-9108] p 3126 N93-28120
On modeling of if-then rules for probabilistic inference
[AD-A262789] p 3126 N93-28404

PROBLEM SOLVING
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
A-stable diagonally implicit Runge-Kutta-Nystrom methods for parallel computers
[CWI-NM-R9208] p 3107 N93-27375
The LAZYRMS: Avoiding work in the ATMS
[RUU-CS-92-20] p 3101 N93-28062
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165

PROCESS CONTROL (INDUSTRY)
Identification for the control of MIMO industrial processes
[EUT-91-E-256] p 3010 N93-27229
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593
Coherent systems in the terahertz frequency range: Elements, operation, and examples
p 3011 N93-27727

PROCUREMENT
Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828

PRODUCT DEVELOPMENT
NASA SBIR product catalog, 1990
[NASA-TM-105103] p 3163 N93-27028
Strategic planning for molten carbonate fuel cell development and commercialization
[DE93-009156] p 3064 N93-27107

PRODUCTION ENGINEERING
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967

PRODUCTION MANAGEMENT
A general model for maintenance of complex systems
[CWI-BS-R9201] p 3124 N93-27393

PRODUCTIVITY
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057
Productivity increases in science
[DE93-009473] p 3109 N93-28453

PRODUCTS
NASA SBIR product catalog, 1991
[NASA-TM-108080] p 3163 N93-27591

PROGRAM VERIFICATION (COMPUTERS)
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
Software quality and testing: What DOD can learn from commercial practices
[AD-A262332] p 3099 N93-27652
An examination of selected software testing tools:
[AD-A261941] p 3099 N93-27665
Origin tracking
[CWI-CS-R9230] p 3100 N93-27994
An integrated environment for the development of scientific and engineering applications
[AD-A262277] p 3103 N93-28239

PROGRAMMING ENVIRONMENTS
The second Garnet compendium: Collected papers 1990-1992
[AD-A262696] p 3102 N93-28118

PROGRAMMING LANGUAGES
Formal specification of MANIFOLD: A preliminary study
[CWI-CS-R9215] p 3093 N93-27254
A comparison of OBJ3 and ASF+SDF
[CWI-CS-R9223] p 3094 N93-27363
Using cached functions and constructors for incremental attribute evaluation
[RUU-CS-92-11] p 3094 N93-27369
Associative matching for linear terms
[CWI-CS-R9224] p 3094 N93-27377
A design and realization exercise of a mini message transfer system
[MEMO-INF-92-51] p 3095 N93-27386
Specification of MANIFOLD, version 1.0
[CWI-CS-R9220] p 3095 N93-27388
Comparative transition system semantics
[CWI-CS-R9222] p 3095 N93-27389
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492
An executable semantics for a subset of COLD
[CWI-CS-R9145] p 3097 N93-27493
Towards a design theory for database triggers
[CWI-CS-R9201] p 3166 N93-27494
Bisimulation semantics for concurrency with atomicity and action refinement
[CWI-CS-R9210] p 3116 N93-27498
Processes as terms: Non-well-founded models for bisimulation
[CWI-CS-R9211] p 3097 N93-27499
A primitive recursive set theory and AFA: On the logical complexity of the largest bisimulation
[CWI-CS-R9213] p 3097 N93-27501
More examples in MANIFOLD
[CWI-CS-R9214] p 3097 N93-27502
A simple specification language combining processes, time, and data
[CWI-CS-R9209] p 3097 N93-27525
Computable processes and bisimulation equivalence
[CWI-CS-R9207] p 3098 N93-27552
Origin tracking
[CWI-CS-R9230] p 3100 N93-27994
Regular processes with relative time and silent steps
[CWI-CS-R9231] p 3101 N93-27995
Specification and generation of a lambda-calculus environment
[CWI-CS-R9233] p 3101 N93-27997

PROJECT MANAGEMENT
Systems overview p 2977 N93-26915
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
Lotosphere, an attempt towards a design culture
[MEMO-INF-92-56] p 3163 N93-27490
Repository-Based Software Engineering Program: Working Program Management Plan
[NASA-CR-193113] p 3104 N93-28319

PROJECT PLANNING
Strategic plan for scientific computing
[DE93-006875] p 3090 N93-27614

PROJECTILES
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955

PROJECTIVE GEOMETRY
The power of parallel projection
[RUU-CS-92-17] p 3100 N93-27908

PROLOG (PROGRAMMING LANGUAGE)
A theory of first-order built-in's of PROLOG
[CWI-CS-R9216] p 3093 N93-27255

PROP-FAN TECHNOLOGY
In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft
[NASA-TM-103719] p 3129 N93-27058
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148

PROPAGATION
The universal propagator p 3141 N93-27313
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential
p 3141 N93-27314

PROPAGATION MODES
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998

PROPANE
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528

PROPELLANT CHEMISTRY
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-26675

PROPELLANT COMBUSTION
The 29th JANNAF Combustion Subcommittee Meeting, volume 1
[CPIA-PUBL-593-VOL-1] p 2985 N93-27134
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
Progress in optical diagnostic development for the electro-thermal chemical program
[DE93-009452] p 2997 N93-28452
PROPELLANT DECOMPOSITION
Regression rate mechanism in a solid fuel ramjet p 2922 N93-27185
PROPELLANT PROPERTIES
Prediction of propellant behavior in spinning flow of a space motor p 2923 N93-27193
PROPELLANT SENSITIVITY
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296
PROPELLANT STORAGE
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025
PROPELLANT TANKS
Investigation of separation in a strap-on Space Shuttle system
[AD-A262372] p 2956 N93-27693
PROPELLANT TRANSFER
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025
PROPELLER BLADES
Interaction between ice and propeller
[VTT-TIED-1281] p 3051 N93-27832
PROPELLER FANS
In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft
[NASA-TM-103719] p 3129 N93-27058
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148
PROPELLER NOISE
In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft
[NASA-TM-103719] p 3129 N93-27058
PROPELLERS
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
PROPORTIONAL CONTROL
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207
PROPORTIONAL COUNTERS
Results on Monte-Carlo simulations of a microstrip gas counter
[NIKHEF-H/92-10] p 3040 N93-27541
PROPULSION SYSTEM CONFIGURATIONS
Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
Clustered engine study p 2978 N93-26925
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Next generation system modeling of NTR systems p 2981 N93-26961
Nuclear electric propulsion systems overview p 2955 N93-26970
The 20 kWe NEP system studies p 2982 N93-26971
Scoping calculations of power sources for NEP p 2982 N93-26973
NEP processing, operations, and disposal p 2982 N93-26975
The 20 kWe NEP flight system p 2983 N93-26983
NEP systems model p 2984 N93-26987
Innovative electric propulsion thruster modeling p 2984 N93-26989
The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
Space Station propulsion system p 2969 N93-27817
Advanced transportation system studies. Alternate propulsion subsystem concepts: Propulsion database
[NASA-CR-192545] p 2987 N93-28325
PROPULSION SYSTEM PERFORMANCE
Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
Nuclear electric propulsion systems overview p 2955 N93-26970
Scoping calculations of power sources for NEP p 2982 N93-26973
NEP processing, operations, and disposal p 2982 N93-26975
The 20 kWe NEP flight system p 2983 N93-26983
NEP systems model p 2984 N93-26987
Thruster models for NEP system analysis p 2984 N93-26988
The development of hydrogen sensor technology at NASA Lewis Research Center
[NASA-TM-106141] p 3045 N93-27021
A modified approach to controller partitioning
[NASA-TM-106167] p 3110 N93-28051
PROSTAGLANDINS
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism
[NASA-CR-193041] p 3083 N93-27102
PROSTHETIC DEVICES
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
PROTECTION
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979
PROTECTIVE CLOTHING
Lightweight passive microclimate cooling device
[AD-A262262] p 3087 N93-28112
PROTECTIVE COATINGS
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Alternating current (AC) impedance testing of coated traycans
[AD-A261256] p 3030 N93-27099
Exploration of multilayer concepts for oxidation protection of carbon-carbon composites
[AD-A262380] p 2991 N93-27653
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219
Monte Carlo modeling of atomic oxygen attack of polymers with protective coatings on LDEF p 3008 N93-28282
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366
Diamond composite films for protective coatings on metals and method of formation
[NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426
PROTEIN SYNTHESIS
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism
[NASA-CR-193041] p 3083 N93-27102
PROTEINS
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293
PROTOCOL (COMPUTERS)
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
A design and realization exercise of a mini message transfer system
[MEMO-INF-92-51] p 3095 N93-27386
Priority inheritance in real-time micro kernels
[MEMO-INF-92-52] p 3095 N93-27387
Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
Linear-time snapshot protocols for unbalanced systems
[CWI-CS-R9236] p 3091 N93-28000
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444
PROTON IRRADIATION
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
PROTON PRECIPITATION
Kinetic studies of ionospheric transport in the polar cap and auroral zone
[AD-A262805] p 3074 N93-28380
PROTONS
Hadronic production of J/psi at large chi(sub F) in 800 GeV p+Cu and p+Be collisions
[DE93-007706] p 3131 N93-26610
Production of ultra cold protons and negative hydrogen ions
[DE93-008328] p 3132 N93-27618
Theoretical studies in nuclear physics
[DE93-010142] p 3139 N93-28215
Two-proton correlations from heavy-ion collisions: Determining the reaction zone of Ni + Ni by the Hanbury-Brown-Twiss effect
[DE93-008971] p 3137 N93-28331
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
Electron transfer, proton transfer and photoaddition reactions in isolated clusters
[AD-A262719] p 3137 N93-28398
PROTOTYPES
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis
[AD-A262151] p 2946 N93-27546
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152
Development and evaluation of a cleanable high efficiency steel filter
[DE93-008024] p 3070 N93-28419
PROVING
Design verification test matrix development for the STME thrust chamber assembly
[NASA-TM-108406] p 2986 N93-27251
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
PSYCHOPHARMACOLOGY
Analysis of neural systems involved in modulation of memory storage
[AD-A262418] p 3084 N93-27654
PSYCHOPHYSIOLOGY
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307
PUBLIC HEALTH
SNTP environmental, safety, and health p 2980 N93-26939
PUBLIC RELATIONS
Nuclear systems in space? Does/will the public accept them? p 2977 N93-26917
PULSE AMPLITUDE
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178
PULSE CODE MODULATION
Digital audio and video broadcasting by satellite p 3023 N93-26645
PULSE COMMUNICATION
Digital telecommunications are a key development factor: Integration of satellite into overall telecommunication networks as a way to harmonize social and economic implications p 3025 N93-26660
PULSE COMPRESSION
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007
PULSE DURATION
Ultraviolet Free-Electron Laser (UV FEL) Facility at Brookhaven National Laboratory
[DE93-007274] p 3048 N93-28355
PULSE DURATION MODULATION
A PWM current-source inverter for interconnection between a photovoltaic array and the utility line
[EUT-91-E-253] p 3065 N93-27227
PULSE GENERATORS
High-voltage pulse generator capable of 200 J at 5 kV
[AD-A262111] p 3031 N93-27673
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728
NIKHEF-K contributions to the 3rd European Particle Accelerator Conference
[NIKHEF-AMPS-92-02] p 3139 N93-28337

Mechanical design philosophy and construction of the Amsterdam Pulse Stretcher ring AmPS
p 3139 N93-28339

PULSE MODULATION
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327

PULSE POSITION MODULATION
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073

PULSED LASERS
Summary of progress in laser fusion; advanced technology developments: National Laser Users Facility news; and a laser system report --- laser fusion and laser energetics
[DE93-009054] p 3047 N93-27120
Quasiclassical approach to ionization of atoms by strong laser pulses: The comparison with the simpleman's models and Newtonian dynamics
[DE93-008738] p 3137 N93-28463

PULSEJET ENGINES
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase
p 2922 N93-27186

PURSUIT TRACKING
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208

PYLON MOUNTING
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070

PYLONS
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070

PYROLYSIS
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine
[AD-A261965] p 3008 N93-27666
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336

PYROLYTIC GRAPHITE
STM tip-induced transitions of dislocation network structures on the surface of highly oriented pyrolytic graphite
[AD-A262419] p 3004 N93-27655
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303

PYROPHORIC MATERIALS
Aerospace applications of metal combustion
p 2920 N93-27175

PYRROLES
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685

Q

QUADRATIC EQUATIONS
Bifurcation of limit cycles in a particular class of quadratic systems with two centres
[REPT-92-43] p 3119 N93-27931

QUADRATIC PROGRAMMING
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
Concurrent data objects in quadratic space
[CS-9112] p 3101 N93-28066

QUADRATURE PHASE SHIFT KEYING
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190

QUADRATURES
Digital tracking loops for a programmable digital modem
[NASA-CR-189219] p 3089 N93-27014

QUADRUPOLES
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711

QUALITY CONTROL
Some aspects of a 3-dimensional reference system for surveying in the Netherlands: Quality analysis of GPS phase observations
[REPT-92.1] p 3063 N93-27368
A system for measurement and control of weld pool geometry in automatic arc welding
[ETN-93-93154] p 3050 N93-27380
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
Software quality and testing: What DOD can learn from commercial practices
[AD-A262332] p 3099 N93-27652
An examination of selected software testing tools:
[AD-A261941] p 3099 N93-27665
Application of quality function deployment to the design of a lithium battery
[DE93-008346] p 3033 N93-28459

QUANTILES
Bootstrapping multivariable U-quantiles and related statistics
[CWI-BS-R9215] p 3126 N93-28091

QUANTUM CHROMODYNAMICS
Mass spectra of the particle-antiparticle system with a Dirac oscillator interaction p 3146 N93-27351
Time evolution of the quark-gluon plasma
[DE93-008703] p 3149 N93-27620
The improvement of hadronic matrix elements in lattice QCD
[SSCL-PREPRINT-737] p 3157 N93-28162
Final state interactions from Euclidean Correlation Functions
[SSCL-PREPRINT-742] p 3122 N93-28196
First calculation of D(+) approaches (K bar)(*0)e(+)nu(sub e) in lattice QCD
[SSCL-PREPRINT-748] p 3135 N93-28208
Hadron structure on the lattice
[SSCL-PREPRINT-754] p 3157 N93-28211
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
Recent progress in lattice QCD
[DE93-006827] p 3157 N93-28312
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353
Beyond metric gravity: Progress on PS-200
[DE93-008723] p 3158 N93-28461

QUANTUM EFFICIENCY
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216

QUANTUM ELECTRONICS
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz
p 3014 N93-27749
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871
JSEP annual report, 11 January 1991 - 10 January 1993
[AD-A261948] p 3031 N93-27918
Solid state research
[AD-A262874] p 3154 N93-28247
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A262704] p 3028 N93-28393

QUANTUM MECHANICS
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
Quons, an interpolation between Bose and Fermi oscillators p 3141 N93-27312
Phase-space quantum mechanics study of two identical particles in an external oscillatory potential
p 3141 N93-27314
The SU(2) action-angle variables
p 3129 N93-27316
Symmetries of coupled harmonic oscillators
p 3142 N93-27318
The q-harmonic oscillators, q-coherent states and the q-symplecton p 3142 N93-27319
Deformation of supersymmetric and conformal quantum mechanics through affine transformations
p 3142 N93-27321
Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327
Point form relativistic quantum mechanics and relativistic SU(6) p 3144 N93-27332
Phase space localization for anti-de Sitter quantum mechanics and its zero curvature limit
p 3144 N93-27333
Proper-time relativistic dynamics p 3144 N93-27334
On harmonic oscillators and their Kemmer relativistic forms p 3144 N93-27336
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342
Quantized discrete space oscillators
p 3146 N93-27349
From harmonic to anharmonic oscillators
p 3146 N93-27352
Atomic supersymmetry p 3146 N93-27353
Covariant harmonic oscillators: 1973 revisited
p 3147 N93-27358
Fluctuations in quantum transport theories of nuclear matter
[KVI-930] p 3155 N93-27395
The Mathai-Quillen formalism and topological field theory
[NIKHEF-H/92-07] p 3155 N93-27496
The N equals 2 topological gauge theory, the Euler characteristic of moduli spaces, and the Casson invariant
[NIKHEF-H/91-28] p 3156 N93-27509
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
Transformation of the Kepler problem
p 3156 N93-28068
Magnetic properties and critical behavior of the conductivity near the M-I transition
[DE93-011437] p 3032 N93-28217
Beyond metric gravity: Progress on PS-200
[DE93-008723] p 3158 N93-28461

QUANTUM OPTICS
Which Q-analogue of the squeezed oscillator?
p 3142 N93-27320
Novel properties of the q-analogue quantized radiation field p 3143 N93-27324
Distribution of photons in squeezed polymode light
p 3143 N93-27325
Two photon annihilation operators and squeezed vacuum p 3143 N93-27326
Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327
Using harmonic oscillators to determine the spot size of Hermite-Gaussian laser beams p 3049 N93-27328
Squeezed states of damped oscillator chain
p 3143 N93-27329
The uncertainty principle in resonant gravitational wave antennae and quantum non-demolition measurement schemes p 3143 N93-27330
Harmonic oscillator states in aberration optics
p 3143 N93-27331
Squeezing phenomena in interacting electron-phonon systems
[SSCL-PREPRINT-727] p 3134 N93-28100
Non-isospectral extension of the chiral model and its geometry
[SSCL-PREPRINT-735] p 3128 N93-28101

QUANTUM STATISTICS
Can Bose condensation of alpha particles be observed in heavy ion collisions?
[NASA-TM-108996] p 3138 N93-27259
Quons, an interpolation between Bose and Fermi oscillators p 3141 N93-27312
Wigner expansions for partition functions of nonrelativistic and relativistic oscillator systems
p 3145 N93-27343
A boson field stochastic calculus and quantum filtering in Fock space
[SSCL-PREPRINT-723] p 3156 N93-28096
Large deviations theory and stochastic gauge fixing
[SSCL-PREPRINT-739] p 3126 N93-28193

QUANTUM THEORY
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
The q-harmonic oscillators, q-coherent states and the q-symplecton p 3142 N93-27319
Phase of the quantum harmonic oscillator with applications to optical polarization p 3142 N93-27322
Condition for equivalence of q-deformed and anharmonic oscillators p 3143 N93-27323
On inducing finite dimensional physical field representations for massless particles in even dimensions p 3144 N93-27339
Quantum harmonic oscillator in a thermal bath
p 3145 N93-27345
Symmetry algebra of a generalized anisotropic harmonic oscillator p 3122 N93-27347
On the spring and mass of the Dirac oscillator
p 3146 N93-27355
Classical confined particles p 3146 N93-27356
Second quantization in bit-string physics
p 3146 N93-27357
Algebraic conformal field theory
[NIKHEF-H/91-26] p 3128 N93-27507
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz
p 3014 N93-27749
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197
Quantum non-demolition measurements and generalized states at thermal equilibrium
[SSCL-PREPRINT-743] p 3158 N93-28386

Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

QUANTUM WELLS
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Simulation of electron transport in quantum well devices p 3019 N93-27773
Workshop on Optical Properties of Mesoscopic Semiconductor Structures
[AD-A263024] p 3147 N93-27912
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304

QUARK MODELS
Heavy quark masses
[SSCL-PREPRINT-772] p 3133 N93-27699
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368

QUARK PARTON MODEL
Calculation of the nucleon structure function from the nucleon wave function p 3147 N93-27359

QUARKS
Classical confined particles p 3146 N93-27356
Semiweak production of a top quark accompanied by a bottom quark and 2 jets at hadron colliders
[NIKHEF-H/91-27] p 3132 N93-27508
Time evolution of the quark-gluon plasma
[DE93-008703] p 3149 N93-27620
B(sub c) decays
[SSCL-PREPRINT-774] p 3132 N93-27638
Heavy quark masses
[SSCL-PREPRINT-772] p 3133 N93-27699
Theoretical nuclear reaction and structure studies using hyperons and photons
[DE93-009765] p 3136 N93-28213
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356

QUARTZ
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007

QUASARS
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
A search for quasar protoclusters at z greater than 4 p 3174 N93-26721
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
A faint field-galaxy redshift survey in quasar fields p 3179 N93-26751
Can quasars photoionize the intergalactic medium at high redshift? p 3179 N93-26756
Metal abundances at z = 3.4 p 3179 N93-26757
Neutral hydrogen at the present epoch: A constraint on the evolution of high redshift systems p 3181 N93-26763
Probing the extent and content of low ionization gas in galaxies: QSO absorption and HI emission p 3181 N93-26766
The two-point correlation function of randomly distributed Lyman alpha clouds p 3181 N93-26767
Ionization states of metallic absorption-line systems in continua of quasars p 3182 N93-26772
Multi-filter spectrophotometry of quasar environments p 3196 N93-26850
Reduction and analysis of VLA maps for 281 radio-loud quasars using the UNLV Cray Y-MP supercomputer p 3197 N93-26855
Quasars in rich galaxy clusters p 3197 N93-26856
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857
Narrow band imaging and long slit spectroscopy of UGC 5101 p 3198 N93-26860
Multi-filter spectrophotometry simulations p 3201 N93-26881
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
The Lyman alpha forest of the high-z quasar 0000-263 p 3203 N93-26890
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143

QUERY LANGUAGES
The power of parallel projection
[RUU-CS-92-17] p 3100 N93-27908

QUEUEING THEORY
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Polynomial-time algorithms for single-machine bicriteria scheduling
[MEMO-COSOR-92-21] p 3093 N93-27248
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling
[MEME-COSOR-92-08] p 3124 N93-27277
Upper and lower bounds for the waiting time in the symmetric shortest queue system
[MEMO-COSOR-92-09] p 3127 N93-27278
A globally gated polling system with server interruptions, and applications to the repairman problem
[CWI-BS-R9208] p 3127 N93-27309
Analysing E(sub k)/E(sub r)/c queues
[MEMO-COSOR-92-27] p 3127 N93-27396
The compensation approach applied to a 2 by 2 switch
[MEMO-COSOR-92-28] p 3115 N93-27397
Approximate analysis of an M/G/1 priority queue with priority changes due to impatience
[CWI-BS-R9202] p 3127 N93-27606
A recurrence type characterization of mu-exponential ergodicity for Markov processes
[TW-92-03] p 3125 N93-27905
Optimal server assignment in the case of service times with monotone failure rates
[TW-92-04] p 3125 N93-27906
On parallel data structuring: A parallel priority queue
[RUU-CS-92-19] p 3108 N93-28061
A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090

QUOTIENTS
Congruences and quotients in categories of algebras
[RUU-CS-92-23] p 3120 N93-28064

R

RADAR ANTENNAS
Development of novel ferrite antennas
[AD-A261690] p 3022 N93-26629

RADAR DATA
A new analysis of the multipath radar data measured by standard telecommunication laboratories
[AD-A261981] p 3026 N93-27643

RADAR DETECTION
Ultra-wideband radar transient detection using time-frequency and wavelet transforms
[AD-A262154] p 3026 N93-27549

RADAR IMAGERY
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054

RADAR MEASUREMENT
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar
[NASA-CR-193160] p 3047 N93-27249
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds
[AD-A262673] p 3078 N93-28115
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

RADAR TARGETS
Ultra-wideband radar transient detection using time-frequency and wavelet transforms
[AD-A262154] p 3026 N93-27549

RADAR TRACKING
Motion-sensitive optical correlator
[NASA-CASE-NPO-18769-1-CU] p 3148 N93-28133
An expert system for processing uncorrelated satellite tracks
[AD-A262713] p 2954 N93-28395

RADAR TRANSMISSION
A new analysis of the multipath radar data measured by standard telecommunication laboratories
[AD-A261981] p 3026 N93-27643

RADIAL DISTRIBUTION
The multicomponent structure of bulges p 3187 N93-26800

RADIAL VELOCITY
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
The dynamics of Abell 2634 p 3193 N93-26836
Evolution of molecular clouds p 3203 N93-26892

RADIANT FLUX DENSITY
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327

RADIATION DAMAGE
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347

RADIATION DISTRIBUTION
Novel properties of the q-analogue quantized radiation field p 3143 N93-27324
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347

RADIATION DOSAGE
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318

RADIATION EFFECTS
Silicon carbide semiconductor technology for high temperature and radiation environments p 2978 N93-26928
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106
Engineering design constraints of the lunar surface environment p 3022 N93-27975
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268
Spectral infrared hemispherical reflectance measurements for LDEF tray clamps p 3149 N93-28270
Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
Combined space environment on spacecraft engineering materials
[NASA-CR-192536] p 2996 N93-28407

RADIATION HAZARDS
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106

RADIATION PRESSURE
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite p 2924 N93-27199
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079

RADIATION PROTECTION
The radiation protection problems of high altitude and space flight
[DE93-008573] p 3218 N93-27106
Dose in water from external irradiation by electrons: Radiation protection data
[PB93-173425] p 3131 N93-27425
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421

RADIATION PYROMETERS
Correction-free pyrometry in radiant wall furnaces
[NASA-CASE-NPO-18655-1-CU] p 3046 N93-28322

RADIATION SHIELDING
Engineering design constraints of the lunar surface environment p 3022 N93-27975
Lunar base thermal management/power system analysis and design p 3089 N93-27985

RADIATION SOURCES
Ultraviolet Free-Electron Laser (UV FEL) Facility at Brookhaven National Laboratory
[DE93-007274] p 3048 N93-28355

RADIATION TOLERANCE
ELF electric and magnetic fields: Pacific Northwest Laboratory studies
[DE93-008255] p 3029 N93-28420

RADIATION TRANSPORT
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058
RADIATIVE HEAT TRANSFER
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Galaxy tracers in N-body simulations
p 3176 N93-26732
The hydrodynamics of galaxy formation on Kiloparsec scales p 3176 N93-26738
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
RADIATIVE TRANSFER
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution
p 3173 N93-26715
The absorption and emission spectrum of radiative cooling galactic fountain gas p 3200 N93-26871
RADICALS
Theoretical studies of the reactions and spectroscopy of radical species relevant to combustion reactions and diagnostics
[DE93-010247] p 2993 N93-26619
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
RADIO ANTENNAS
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. A: Multiband dipole antenna
[AD-A262010] p 3027 N93-27668
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas
p 3011 N93-27728
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
RADIO ASTRONOMY
Primeval galaxies in the sub-mm and mm
p 3172 N93-26713
Two searches for primeval galaxies
p 3172 N93-26714
Evolution of luminous IRAS galaxies: Radio imaging
p 3184 N93-26786
A neutral hydrogen survey of the Hydra 1 cluster
p 3194 N93-26843
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785
Characterization of lunar surface materials for use in construction p 3211 N93-27959
RADIO COMMUNICATION
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
RADIO EMISSION
A radio continuum survey of edge-on spiral galaxies at 90 cm p 3185 N93-26790
A study of the x ray environment of radio galaxies
p 3194 N93-26845
Nuclear activity and the environments of nearby radio galaxies p 3196 N93-26852
A halo and a blow-out in NGC 253
p 3199 N93-26869
RADIO EQUIPMENT
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243
RADIO FREQUENCIES
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
RADIO FREQUENCY INTERFERENCE
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
RADIO GALAXIES
Primeval galaxies in the sub-mm and mm
p 3172 N93-26713
Two searches for primeval galaxies
p 3172 N93-26714
Distant radio galaxies in the near IR
p 3177 N93-26742
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
A study of the x ray environment of radio galaxies
p 3194 N93-26845
Nuclear activity and the environments of nearby radio galaxies p 3196 N93-26852
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873
RADIO INTERFEROMETERS
Feeding IC 342: The nuclear spiral of a starburst galaxy p 3184 N93-26782
RADIO JETS (ASTRONOMY)
Numerical simulations of bent, disrupted radio jets
p 3188 N93-26813
Radio jets in colliding galaxies: Testing the interaction-activity connection p 3191 N93-26828
Jet induced star formation in centrally dominant galaxies? p 3193 N93-26840
RADIO OBSERVATION
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
RADIO RECEIVERS
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas
p 3011 N93-27728
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions
p 3013 N93-27743
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
A low-noise 492 GHz SIS waveguide receiver
p 3015 N93-27750
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
Progress in integrated-circuit horn antennas for receiver applications. Part 2: A 90 GHz quasi-integrated horn antenna receiver p 3016 N93-27756
Embedding impedance approximations in the analysis of SIS mixers p 3016 N93-27760
Source conductance scaling for high frequency superconducting quasiparticle receivers
p 3018 N93-27771
A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785
RADIO SOURCES (ASTRONOMY)
The dynamics of Abell 2634 p 3193 N93-26836
RADIO SPECTRA
Starburst ages in HII galaxies p 3183 N93-26777
RADIO TELEMETRY
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
RADIO TELESCOPES
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785
RADIO TRANSMISSION
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations
[NASA-TM-106172] p 2956 N93-27064
RADIO TRANSMITTERS
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas
p 3011 N93-27728
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
RADIO WAVES
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243
RADIOACTIVE DECAY
Studies in medium energy physics
[DE93-007305] p 3131 N93-27048
B(sub c) decays
[SSCL-PREPRINT-774] p 3132 N93-27638
A lattice computation of the decay constant of the B-meson
[SSCL-PREPRINT-747] p 3135 N93-28198
First calculation of D(+) approaches (K bar)(*0)e(+)nu(sub e) in lattice QCD
[SSCL-PREPRINT-748] p 3135 N93-28208
Hadron structure on the lattice
[SSCL-PREPRINT-754] p 3157 N93-28211
Selected problems in experimental intermediate energy physics
[DE93-007300] p 3137 N93-28356
Medium energy measurements on N-N parameters
[DE93-007304] p 3137 N93-28358
Leading non-logarithmic contribution to the electropenguin diagram and phenomenology of kaon decays
[SSCL-PREPRINT-745] p 3137 N93-28388
Experimental challenges at future hadron colliders (lectures for the 1992 Saint Croix Summer School)
[DE93-008613] p 3140 N93-28429
RADIOACTIVE ISOTOPES
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058
Status of the Soviet-American gallium experiment
[DE93-009067] p 3218 N93-28157
The search for cold dark matter using germanium detectors p 3205 N93-28250
RADIOACTIVE WASTES
Survey of fiber-optic sensor for remote sensing in radiologically and chemically harsh environments
[DE93-004998] p 3062 N93-26624
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
Status and integration of the gas generation studies performed for the hydrogen safety program
[DE93-008518] p 2994 N93-27105
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
RADIOACTIVITY
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
RADIOCHEMISTRY
Status of the Soviet-American gallium experiment
[DE93-009067] p 3218 N93-28157
RADIOMETERS
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
Coherent systems in the terahertz frequency range: Elements, operation, and examples
p 3011 N93-27727
All-solid-state radiometers for environmental studies to 700 GHz p 3020 N93-27784
RADIOTELEPHONES
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
RAIL TRANSPORTATION
Comparison of major parameters in electrodynamic and electromagnetic levitation transport systems
[PB93-154755] p 3051 N93-27412
Aerodynamic forces on maglev vehicles
[PB93-154813] p 2930 N93-27413
RAIN
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385
RAMAN SPECTRA
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar
[NASA-CR-193160] p 3047 N93-27249
RAMJET ENGINES
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
Regression rate mechanism in a solid fuel ramjet
p 2922 N93-27185
RANDOM ACCESS MEMORY
Rutger's CAM2000 chip architecture
[NASA-CR-193078] p 3151 N93-27094
A single-transistor memory cell and sense amplifier for a gallium arsenide dynamic random access memory
[AD-A261975] p 3153 N93-27953

RANDOM NOISE
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference
[AD-A263020] p 3031 N93-27911
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
Statistical techniques for signal processing
[AD-A262731] p 3126 N93-28400
RANDOM PROCESSES
Experiments: Design, parametric and nonparametric analysis, and selection
[MEMO-COSOR-92-15] p 3123 N93-27234
Subset selection: Robustness and imprecise selection
[MEMO-COSOR-92-10] p 3124 N93-27279
The compensation approach applied to a 2 by 2 switch
[MEMO-COSOR-92-28] p 3115 N93-27397
On the asymptotic behavior of discrete events systems
[ISBN-90-74488-01-3] p 3125 N93-27876
Finite interpolation of random fields
[CWI-BS-R9210] p 3126 N93-28087
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics
[SSCL-PREPRINT-725] p 3126 N93-28098
On Radon-Nikodym derivatives of finitely additive measures induced by nonlinear transformations on Hilbert space
[MEMO-1063] p 3129 N93-28147
RANDOM VARIABLES
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Some limit theorems in log density
[W-9108] p 3126 N93-28120
On Radon-Nikodym derivatives of finitely additive measures induced by nonlinear transformations on Hilbert space
[MEMO-1063] p 3129 N93-28147
RANGE (EXTREMES)
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
Wavelet local extrema applied to image processing
[AD-A262362] p 3118 N93-27691
RANKINE CYCLE
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985
RANKINE-HUGONIOT RELATION
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219
RAPID QUENCHING (METALLURGY)
Precipitation phenomena in aluminium-based metal matrix composites: Effects of reinforcement on kinetics and misfit accommodation
[ETN-93-93604] p 2999 N93-27877
RAPID TRANSIT SYSTEMS
Comparison of major parameters in electrodynamic and electromagnetic levitation transport systems
[PB93-154755] p 3051 N93-27412
Aerodynamic forces on maglev vehicles
[PB93-154813] p 2930 N93-27413
RARE EARTH ELEMENTS
Low-spin identical bands in neighboring odd-A and even-even nuclei
[DE93-008569] p 3132 N93-27486
RAREFIED GAS DYNAMICS
Hypersonic panel flutter in a rarefied atmosphere
[NASA-CR-4514] p 2929 N93-27084
RASTER SCANNING
An architecture for interactive raster graphics
[CWI-CS-R9229] p 3102 N93-28102
RATIONAL FUNCTIONS
On ranks of twists of elliptic curves and power-free values of binary forms
[W-9213] p 3118 N93-27868
RATS
Variations of time-to-incapacitation and carboxyhemoglobin values in rats exposed to two carbon monoxide concentrations
[DOT/FAA/AM-93/7] p 3082 N93-27152
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415
ELF electric and magnetic fields: Pacific Northwest Laboratory studies
[DE93-008255] p 3029 N93-28420
RAWINSONDES
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
RAY TRACING
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
Correction-free pyrometry in radiant wall furnaces
[NASA-CASE-NPO-18655-1-CU] p 3046 N93-28322
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451
RDX
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine
[AD-A261965] p 3008 N93-27666
REACTING FLOW
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610
REACTION KINETICS
Experiment and simulation of hole-coupled resonator modes with a CW HeNe laser
[DE93-007729] p 3047 N93-26613
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Recovery and separation of precious metals from space p 3001 N93-26686
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Regression rate mechanism in a solid fuel ramjet p 2922 N93-27185
Regenerable biocide delivery unit, volume 2
[NASA-CR-185701-VOL-2] p 3082 N93-27360
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
REACTION PRODUCTS
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine
[AD-A261965] p 3008 N93-27666
REACTION WHEELS
Attitude stabilization of bias momentum satellites p 2923 N93-27195
TechSAT attitude control p 2924 N93-27197
REACTIVITY
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
Novel gas phase ion molecule reactions of C60(++) with O2
[AD-A262821] p 3136 N93-28225
Stability and reactivity of dimethylethoxysilane p 2997 N93-28258
Atomic oxygen effects on LDEF experiment AO171 p 3138 N93-28281
REACTOR CORES
Particle bed reactor modeling p 2980 N93-26954
REACTOR DESIGN
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
Particle bed reactor modeling p 2980 N93-26954
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421
REACTOR MATERIALS
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
REACTOR SAFETY
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
Mission design considerations for nuclear risk mitigation p 2978 N93-26923
SNTP environmental, safety, and health p 2980 N93-26939
Radionuclide inventories for short run-time space nuclear reactor systems
[DE93-004040] p 3138 N93-28058
Austrian contributions to reactor safety research
[OEFZS-4622] p 3139 N93-28203
READING
Educational software marketplace and adult literacy niches
[PB93-163897] p 3160 N93-27414
Case study of technology use in adult literacy programs
[PB93-163905] p 3161 N93-27415
Software for adult literacy: Scope, suitability, available sources for information, and implications for federal policy
[PB93-163913] p 3161 N93-27416
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
REAL NUMBERS
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
REAL TIME OPERATION
Real time process algebra with prefixed integration
[CWI-CS-R9219] p 3114 N93-27362
Priority inheritance in real-time micro kernels
[MEMO-INF-92-52] p 3095 N93-27387
Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
Burst-by-burst laser frequency monitor
[NASA-CASE-NPO-18596-1-CU] p 3048 N93-28132
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460
RECEIVERS
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Progress in integrated-circuit horn antennas for receiver applications. Part 1: Antenna design p 3015 N93-27755
Measurements of the single sideband suppression for a 650 GHz heterodyne receiver p 3020 N93-27780
A broadband THz receiver for low background space applications p 3020 N93-27782
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785
RECEPTORS (PHYSIOLOGY)
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181
RECOIL PROTONS
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
RECOMBINATION COEFFICIENT
Contactless microwave lifetime measurement
[ETN-93-93595] p 3027 N93-27870
RECONSTRUCTION
Restoration of incomplete contour images using Markov random fields
[INRIA-RR-1688] p 3126 N93-28445
RECORDING INSTRUMENTS
Optical disk technology Spaceflight Optical Disk Recorder (SODR) p 2964 N93-27710
RECRYSTALLIZATION
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
RECTANGLES
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
RECTANGULAR PANELS
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
RECTANGULAR PLATES
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
RECTANGULAR WAVEGUIDES
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
RECTANGULAR WINGS
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450
RECTENNAS
Rectenna thermal model development p 3022 N93-27986
Choice of antenna geometry for microwave power transmission from solar power satellites p 2988 N93-27987
RECURSIVE FUNCTIONS
Provably recursive programs
[CWI-CS-R9212] p 3097 N93-27500
A primitive recursive set theory and AFA: On the logical complexity of the largest bisimulation
[CWI-CS-R9213] p 3097 N93-27501
Computable processes and bisimulation equivalence
[CWI-CS-R9207] p 3098 N93-27552

RECYCLING
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136
Trend survey of the global environment adaptation type industry technology
[DE93-781442] p 3066 N93-28435
RED SHIFT
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Two searches for primeval galaxies p 3172 N93-26714
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
The nature of faint emission-line galaxies p 3173 N93-26716
Two protogalaxy candidates in one night p 3173 N93-26717
A search for quasar protoclusters at z greater than 4 p 3174 N93-26721
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
Environmental influences on galaxy evolution p 3175 N93-26727
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Gas dynamic simulations of galaxy formation p 3176 N93-26736
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Distant radio galaxies in the near IR p 3177 N93-26742
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
A faint field-galaxy redshift survey in quasar fields p 3179 N93-26751
Searching for Lyman alpha emission from a possible Zel'dovich pancake p 3179 N93-26755
Can quasars photoionize the intergalactic medium at high redshift? p 3179 N93-26756
Metal abundances at z = 3.4 p 3179 N93-26757
Evidence for a multiphase, inhomogeneous interstellar medium in damped Ly alpha systems p 3180 N93-26760
HST/FOS spectra of PG 1351+64: An intrinsic absorber at low redshift p 3180 N93-26761
Low redshift Lyman alpha absorption lines and the dark matter halos of disk galaxies p 3180 N93-26762
Neutral hydrogen at the present epoch: A constraint on the evolution of high redshift systems p 3181 N93-26763
Probing the extent and content of low ionization gas in galaxies: QSO absorption and HI emission p 3181 N93-26766
Intensity correlation of ionizing background at high redshifts p 3181 N93-26768
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
Multi-filter spectrophotometry simulations p 3201 N93-26881
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
Dynamics of the baryonic component in hierarchical clustering universes p 3203 N93-26888
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143
REDUCED GRAVITY
Acceleration Studies
[NASA-CR-192547] p 2947 N93-26948
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
A multi-zone muffle furnace design
[NASA-TM-106153] p 3009 N93-27011
Growth factor involvement in tension-induced skeletal muscle growth
[NASA-CR-193023] p 3083 N93-27113
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
Magnetic Actuators and Suspension for Space Vibration Control
[NASA-CR-193038] p 3057 N93-27594
Evaluation of actuators for the SDOF and MDOF active microgravity isolation systems p 3057 N93-27595
Metals production p 3214 N93-27970
Rapid Thermal Processing (RTP) of semiconductors in space
[NASA-CR-193110] p 3009 N93-28408
Electrophoretic separation of cells and particles from rat pituitary and rat spleen
[NASA-CR-193073] p 3083 N93-28415
REDUCTION (CHEMISTRY)
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-27969
REENTRY VEHICLES
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
REFILLING
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank
[NASA-TM-106018] p 3039 N93-27155
REFINING
Lunar materials processing system integration p 3021 N93-27972
REFLECTANCE
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
REFLECTED WAVES
Migration of seismic data in the double Radon transformed domain
[ETN-93-93596] p 3073 N93-28094
REFLECTION
The reflection operator in discrete event systems
[CS-9201] p 3110 N93-28067
REFLECTOMETERS
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
REFLECTOR ANTENNAS
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-193030] p 3026 N93-27283
REFLECTORS
Aberration correction of unstable resonators
[NASA-CASE-NPO-18662-1-CU] p 3148 N93-28428
REFRACTIVITY
Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431
REFRACTORY COATINGS
Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431
REFRACTORY MATERIALS
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080
Radial basis function network learns ceramic processing and predicts related strength and density
[NASA-TM-106048] p 2990 N93-27129
Aerospace applications of metal combustion p 2920 N93-27175
Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts p 2962 N93-27575
REFRACTORY METALS
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052
Hot hydrogen testing of refractory metals and ceramics
[NASA-CR-192560] p 2998 N93-27484
REFRIGERANTS
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528
REFRIGERATING
Diffusion-absorption heat pump
[PB93-165777] p 3037 N93-26620
REFRIGERATORS
Diffusion-absorption heat pump
[PB93-165777] p 3037 N93-26620
REFUELING
An engineer/constructor's view of lunar resource development p 3211 N93-27960
REGENERATION (ENGINEERING)
Development of a high temperature steam regenerative H2S removal process based on alumina supported MnO and FeO
[ETN-93-93617] p 2995 N93-27938
REGENERATIVE FUEL CELLS
SPE (tm) regenerative hydrogen/oxygen fuel cells for extraterrestrial surface and microgravity applications p 2969 N93-27813
Fuel cell energy storage for Space Station enhancement p 2969 N93-27815
Fuel cell technology for lunar surface operations p 3067 N93-27965
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
REGIONAL PLANNING
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419
REGISTERS (COMPUTERS)
Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999
Linear-time snapshot protocols for unbalanced systems
[CWI-CS-R9236] p 3091 N93-28000
REGOLITH
Magnetic beneficiation of lunar soils p 3213 N93-27968
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984
Research on lunar resources development and their utilization p 2952 N93-28039
REGRESSION ANALYSIS
Removing Malmquist bias from linear regressions p 3122 N93-26872
Basic statistical analyses of candidate nickel-hydrogen cells for the Space Station Freedom
[NASA-TM-106111] p 3123 N93-27124
A comparison of variable selection criteria for multiple linear regression: A second simulation study
[AD-A262512] p 3125 N93-27664
REGRESSION COEFFICIENTS
Derivation of total ozone amount from NOAA/TOVS data p 3071 N93-26997
REGULATIONS
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
REINFORCING FIBERS
The study of fiber-matrix interactions via FT-IR microscopy and NMR imaging
[AD-A262326] p 3004 N93-27651
RELATIVISTIC EFFECTS
Point form relativistic quantum mechanics and relativistic SU(6) p 3144 N93-27332
Phase space localization for anti-de Sitter quantum mechanics and its zero curvature limit p 3144 N93-27333
Proper-time relativistic dynamics p 3144 N93-27334
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143
RELATIVISTIC PARTICLES
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
Remarks about massive and massless particles in supersymmetry p 3138 N93-27335
Covariant harmonic oscillators: 1973 revisited p 3147 N93-27358
RELATIVISTIC THEORY
Point form relativistic quantum mechanics and relativistic SU(6) p 3144 N93-27332
Phase space localization for anti-de Sitter quantum mechanics and its zero curvature limit p 3144 N93-27333
Proper-time relativistic dynamics p 3144 N93-27334
The algebra of supertraces for 2+1 super de Sitter gravity p 3144 N93-27337
Wigner expansions for partition functions of nonrelativistic and relativistic oscillator systems p 3145 N93-27343
RELATIVISTIC VELOCITY
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models
[NASA-TM-4462] p 3138 N93-27110
RELATIVITY
Variational methods in general relativity: Mitteleuropean mathematical inaccuracy and Italian rigour. The contribution of A. Palatini
[SSCL-PREPRINT-760] p 3156 N93-28145

Beyond metric gravity: Progress on PS-200
[DE93-008723] p 3158 N93-28461
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

RELAXATION (MECHANICS)
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics
[SSCL-PREPRINT-725] p 3126 N93-28098

RELIABILITY
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report
p 2983 N93-26976
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398
Follow-on operational test and evaluation of the NAVSTAR global positioning system air integration/installation program
[AD-A263067] p 2941 N93-27925

RELIABILITY ANALYSIS
Reliability analysis of complex models using sure bounds
[NASA-CR-191445] p 3091 N93-26897
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184

RELIABILITY ENGINEERING
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report
p 2983 N93-26976
Onboard system health assessment
p 2965 N93-27716

RELIEF VALVES
Gas storage and recovery system
[NASA-CASE-MSC-22091-1] p 3021 N93-28136

REMOTE CONTROL
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
An electromagnetically levitated two-axis gimbaless pointing mechanism p 2961 N93-27565

REMOTE MANIPULATOR SYSTEM
The mobile servicing system p 2970 N93-27821
Space teleoperations technology for Space Station evolution p 2970 N93-27823
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover
p 2951 N93-28032

REMOTE SENSING
Dual use of distributed remote sensing satellites
[DE93-008852] p 3062 N93-26615
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689
GRAMI: A crop growth model that can use remotely sensed information
[PB93-162014] p 3062 N93-27053
Remotely sensed data from space: Distribution, pricing, and applications. An OTA background paper
p 3062 N93-27066
Desktop publishing in remote sensing
[BCRS-92-15] p 3063 N93-27702
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Coherent systems in the terahertz frequency range: Elements, operation, and examples
p 3011 N93-27727
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949
Unmanned lunar surface exploration
p 2951 N93-28035
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5
[AD-A262117] p 3079 N93-28183
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192

REMOTE SENSORS
Survey of fiber-optic sensor for remote sensing in radiologically and chemically harsh environments
[DE93-004998] p 3062 N93-26624
All-solid-state radiometers for environmental studies to 700 GHz p 3020 N93-27784
Sensor and actuator technology development
p 3047 N93-27900
Moon revolving observation satellite
p 2952 N93-28038

RENDEZVOUS TRAJECTORIES
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204

RENORMALIZATION GROUP METHODS
Remarks on turbulent constitutive relations
[NASA-TM-106116] p 3038 N93-27010

REPLENISHMENT
The resupply interface mechanism
p 2968 N93-27800

REPRESENTATIONS
Finite element mesh generation from CSG models
[ETN-93-93614] p 3119 N93-27932

REPRODUCTION (BIOLOGY)
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943

RESCUE OPERATIONS
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
Simplified Aid For Crew Rescue (SAFR)
p 2967 N93-27793

RESEARCH
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 8: Phillips Laboratory
[AD-A261972] p 3163 N93-27642

RESEARCH AND DEVELOPMENT
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-192883] p 3206 N93-26674
Satellites and the BISDN: An overview of NASA R/D
[NASA-TM-106108] p 3025 N93-26903
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-002] p 2948 N93-27286
CSTL technical activities 1992
[PB93-173482] p 3219 N93-27399
Ceramics technical activities, 1992 (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173508] p 3003 N93-27400
Magnetic Suspension Technology Workshop
[NASA-CP-3202] p 2959 N93-27554
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 10: Wright Laboratory
[AD-A262018] p 3161 N93-27596
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 11: Arnold Engineering Development Center, Civil Engineering Laboratory, Frank J. Seiler Research Laboratory, Wilford Hall Medical Center
[AD-A262019] p 3161 N93-27597
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 12: Armstrong Laboratory
[AD-A262020] p 3161 N93-27598
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 13: Phillips Laboratory
[AD-A262021] p 3161 N93-27599
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 14: Rome Laboratory
[AD-A262022] p 3161 N93-27600
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 15: Wright Laboratory
[AD-A262023] p 3162 N93-27601
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 2: Armstrong Laboratory
[AD-A261989] p 3162 N93-27628
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 3: Phillips Laboratory
[AD-A261990] p 3162 N93-27629
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 4: Rome Laboratory
[AD-A261991] p 3162 N93-27630
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 5A: Wright Laboratory
[AD-A261992] p 3162 N93-27631
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 5B: Wright Laboratory
[AD-A261993] p 3162 N93-27632
Summer research program (1992). Summer Faculty Research Program (SFRP) reports. Volume 6: Arnold Engineering Development Center, Civil Engineering Laboratory, Frank J. Seiler Research Laboratory, Wilford Hall Medical Center
[AD-A261994] p 3162 N93-27633
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 9: Rome Laboratory
[AD-A262017] p 3163 N93-27634
JSEP annual report, 11 January 1991 - 10 January 1993
[AD-A261948] p 3031 N93-27918
Activities report of the Technische Dienst TNO-TU, Delft (Netherlands)
[ETN-93-93343] p 3219 N93-28201
Summer research program (1992). Graduate student
[AD-A261971] p 3163 N93-28223
Third Annual Women in Science and Technology Conference
[DE93-005271] p 3164 N93-28297
Activities report of the Netherlands Organization for Applied Scientific Research (TNO)
[ETN-93-93339] p 3226 N93-28317

RESEARCH FACILITIES
Facilities p 2954 N93-26963
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
Space Station: Information on National Security applications and cost. Report to the Honorable John W. Warner, US Senate
[GAO/NSIAD-93-208] p 3169 N93-27825
Experimental challenges at future hadron colliders (lectures for the 1992 Saint Croix Summer School)
[DE93-008613] p 3140 N93-28429
Productivity increases in science
[DE93-009473] p 3109 N93-28453

RESEARCH MANAGEMENT
Productivity increases in science
[DE93-009473] p 3109 N93-28453

RESEARCH PROJECTS
The Center of Excellence for Hypersonics Training and Research at the University of Texas at Austin
[NASA-CR-193070] p 2930 N93-27126
Workshop on Harmonic Oscillators
[NASA-CP-3197] p 3141 N93-27311
NASA Small Business Innovation Research Program. Composite List of Projects, 1983 to 1989
[NASA-TM-104991] p 3164 N93-27639
Summer research program (1992). Graduate student
[AD-A261971] p 3163 N93-28223

RESERVOIRS
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

RESIDUAL STRESS
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086

RESIN MATRIX COMPOSITES
A new class of high strength molding resins, phase 1
[AD-A262691] p 3005 N93-28117
The effects of long-duration space exposure on the mechanical properties of some carbon-reinforced resin matrix composites p 2993 N93-28266

RESINS
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622

RESISTOJET ENGINES
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216

RESONANCE
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
Evaluation of integrated tuning elements with SIS devices p 3018 N93-27770
A study of the higher order Lamb resonances on elastic shells: Their prediction and interpretation
[AD-A262237] p 3130 N93-27933
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159

RESONANT FREQUENCIES
Cosmology with liquid mirror telescopes
p 3171 N93-26708
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data
[AD-A262363] p 2942 N93-27692

RESONANT TUNNELING
A quasioptical resonant-tunneling-diode oscillator operating above 200 GHz p 3017 N93-27764
Negative Differential Resistance (NDR) frequency conversion with gain p 3017 N93-27766
Resonant tunneling diodes as sources for millimeter and submillimeter wavelengths p 3018 N93-27772
Simulation of electron transport in quantum well devices p 3019 N93-27773
RESONATORS
Aberration correction of unstable resonators
[NASA-CASE-NPO-18662-1-CU] p 3148 N93-28428
RESOURCES MANAGEMENT
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
RESPIRATORY DISEASES
Evaluation of NO(x)-induced toxicity
[AD-A261034] p 3084 N93-28122
RESPONSE TIME (COMPUTERS)
Polynomial-time algorithms for single-machine bicriteria scheduling
[MEMO-COSOR-92-21] p 3093 N93-27248
REUSABLE LAUNCH VEHICLES
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018
Conceptual study of fly-back booster p 2950 N93-28026
Fly-back booster p 2950 N93-28027
Conceptual study of fly-back booster p 2950 N93-28028
REUSABLE ROCKET ENGINES
NTRE extended life feasibility assessment p 2977 N93-26921
REUSABLE SPACECRAFT
Manned engineering test satellites p 2948 N93-28016
REVERSE ENGINEERING
The theory of interface slicing
[NASA-CR-193108] p 3104 N93-28320
REVERSE OSMOSIS
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
REVERSED FLOW
Combined forced and free convection in a curved duct p 2937 N93-27461
REVIEWING
Study of miniature and microminiature satellite technology p 2949 N93-28022
REYNOLDS EQUATION
Elastohydrodynamic lubrication of multilayered elastic solids p 3053 N93-28413
REYNOLDS NUMBER
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448
REYNOLDS STRESS
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428
RHEOLOGY
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352
RIBONUCLEIC ACIDS
Characterization and classification of strains of Francisella tularensis isolated in the central Asian focus of the Soviet Union and in Japan
[FOA-B-40421-4.4] p 3082 N93-28200
Use of RNA hybridization in the diagnosis of a case of ulceroglandular tularemia
[FOA-B-40422-4.4] p 3083 N93-28212
RICCATI EQUATION
Solutions of the ARE in terms of the Hamiltonian for Riesz-spectral systems
[MEMO-1054] p 3119 N93-28002
Equivalent conditions for the solvability of the infinite-dimensional LQ-problem with unbounded input and output operators
[W-9209] p 3121 N93-28138
RIDING QUALITY
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928
RIEMANN MANIFOLD
Commutative diagrams and tensor calculus in Riemann spaces
[SSCL-PREPRINT-741] p 3122 N93-28195
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197
RIESZ THEOREM
Solutions of the ARE in terms of the Hamiltonian for Riesz-spectral systems
[MEMO-1054] p 3119 N93-28002
RING GALAXIES
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
Models of the Cartwheel ring galaxy: Spokes and starbursts p 3190 N93-26823
Spokes in ring galaxies p 3202 N93-26885
RING WINGS
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
RISK
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
Mission design considerations for nuclear risk mitigation p 2978 N93-26923
ROBOT ARMS
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Adaptive control strategies for flexible robotic arm
[NASA-CR-193111] p 3050 N93-27159
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
Extended task space control for robotic manipulators
[NASA-CASE-NPO-18902-1-CU] p 3052 N93-28129
Parallel manipulators. Part 5: Determination of the workspace for a constant orientation
[INRIA-RR-1645] p 3053 N93-28439
ROBOT CONTROL
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Adaptive control strategies for flexible robotic arm
[NASA-CR-193111] p 3050 N93-27159
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
Robotics technology discipline p 2973 N93-27864
Intelligent robots for planetary exploration and construction p 3054 N93-27980
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Parallel manipulators. Part 5: Determination of the workspace for a constant orientation
[INRIA-RR-1645] p 3053 N93-28439
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460
ROBOT DYNAMICS
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
EVA and telerobot interaction p 2967 N93-27792
The complexity of the free space for motion planning amidst fat obstacles
[RUU-CS-92-31] p 3102 N93-28106
A random approach to motion planning
[RUU-CS-92-32] p 3110 N93-28107
ROBOT SENSORS
Robotics technology discipline p 2973 N93-27864
ROBOTICS
Propellant production and useful materials: Hardware data from components and the systems p 3009 N93-26675
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
Mobile robot navigation using qualitative reasoning
[DE93-008277] p 3109 N93-27104
Technology for Space Station Evolution. Volume 4: Power Systems/Propulsion/Robotics
[NASA-TM-108727] p 2968 N93-27803
The mobile servicing system p 2970 N93-27821
Agent-independent planning p 2970 N93-27822
Automated assembly of large space structures p 2971 N93-27842
Robotics technology discipline p 2973 N93-27864
Return to the Moon: Lunar robotic science missions p 3211 N93-27958
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160
Rapid Thermal Processing (RTP) of semiconductors in space
[NASA-CR-193110] p 3009 N93-28408
ROBOTS
Intelligent robots for planetary exploration and construction p 3054 N93-27980
The use of automation and robotic systems to establish and maintain lunar base operations p 3111 N93-27982
Robust control of robots using only position measurements
[MEMO-1073] p 3110 N93-28092
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460
ROBUSTNESS (MATHEMATICS)
Robustness enhancement of neurocontroller and state estimator
[NASA-TM-106028] p 2946 N93-26907
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947
Mixed H2/H infinity control in a stochastic framework
[MEMO-COSOR-92-13] p 3109 N93-27232
Subset selection: Robustness and imprecise selection
[MEMO-COSOR-92-10] p 3124 N93-27279
The Middeck Active Control Experiment (MACE): Identification for robust control p 3059 N93-27898
Sensor and actuator technology development p 3047 N93-27900
Robust control of robots using only position measurements
[MEMO-1073] p 3110 N93-28092
Robust control for uncertain structures p 3061 N93-28174
Cost averaging techniques for robust control of flexible structural systems p 3061 N93-28175
ROCKET ENGINE DESIGN
Requirements management and control p 2977 N93-26916
Rover/NERVA-derived near-term nuclear propulsion p 2977 N93-26918
Advanced propulsion engine assessment based on a cermet reactor p 2977 N93-26919
NTRE extended life feasibility assessment p 2977 N93-26921
Engine management during NTRE start up p 2980 N93-26953
Rocketdyne/Westinghouse nuclear thermal rocket engine modeling p 2980 N93-26955
Nuclear Engine System Simulation (NESS) version 2.0 p 2981 N93-26958
Next generation system modeling of NTR systems p 2981 N93-26961
Rocket engine numerical simulator p 2981 N93-26962
Reliability studies of integrated modular engine system designs
[NASA-TM-106178] p 2984 N93-27022
Design verification test matrix development for the STME thrust chamber assembly
[NASA-TM-108406] p 2986 N93-27251
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 2: Appendices
[NASA-CR-191059-VOL-2] p 2986 N93-27532
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535
ROCKET ENGINES
Los Alamos research in nozzle based coaxial plasma thrusters p 2983 N93-26981
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
Space Station propulsion integrated propulsion test article p 2970 N93-27818
Qualitative model-based diagnostics for rocket systems
[NASA-TM-106234] p 2956 N93-28052
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300
Advanced transportation system studies. Alternate propulsion subsystem concepts: Propulsion database
[NASA-CR-192545] p 2987 N93-28325
Hybrid bearings for turbopumps and the like
[NASA-CASE-MFS-28491-1] p 3052 N93-28326

ROCKET LININGS
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
ROCKET NOZZLES
Nuclear thermal propulsion technology overview
p 2978 N93-26927
Probabilistic structural analysis for nuclear thermal propulsion p 2979 N93-26931
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324
ROCKET PROPELLANTS
Flow instability in particle-bed nuclear reactors
p 2979 N93-26934
SNTP propellant management system
p 2979 N93-26937
ROCKET TEST FACILITIES
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966
Kauai Test Facility CDX rocket operation environmental assessment, Sandia National Laboratories, Albuquerque, New Mexico
[DE93-005491] p 3070 N93-28300
ROCKET VEHICLES
Lunar NTR vehicle design and operations study
p 2978 N93-26922
ROLL
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence
p 2927 N93-27220
ROLLER BEARINGS
Hybrid bearings for turbopumps and the like
[NASA-CASE-MFS-28491-1] p 3052 N93-28326
ROLLING MOMENTS
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite
p 2925 N93-27203
ROOM TEMPERATURE
Crack propagation in NiAl and FeAl
[DE93-007244] p 3061 N93-28313
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
ROOT-MEAN-SQUARE ERRORS
LUTE primary mirror study
[NASA-CR-193069] p 3148 N93-28448
ROTARY WING AIRCRAFT
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241
ROTARY WINGS
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450
ROTATING BODIES
A conventional point of view on active magnetic bearings p 2961 N93-27568
ROTATING CYLINDERS
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
ROTATING DISKS
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
ROTATING ENVIRONMENTS
Magnetic Suspension Technology Workshop
[NASA-CP-3202] p 2959 N93-27554
ROTATING SHAFTS
Magnetic suspension characteristics of electromagnetic actuators p 2960 N93-27561
ROTATION
Optimization method in nonlinear analysis of a circular rotating cluster package p 2926 N93-27213
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955
ROTATIONAL SPECTRA
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
CO deficiency in galaxies of the Fornax cluster?
p 3185 N93-26791
Molecular gas temperature and density in spiral galaxies p 3185 N93-26792
Molecular clouds in the centers of galaxies: Constraints from HCN and CO-13 line emission
p 3188 N93-26806
ROTOR AERODYNAMICS
Dynamic System Coupler Program (DYSCO 4.1). Volume 1: Theoretical manual
[AD-B131156L] p 3098 N93-27531
ROTOR BLADES (TURBOMACHINERY)
Magnetic bearings: Fifty years of progress
p 2959 N93-27556
Digital control of magnetic bearings supporting a multimass flexible rotor p 2959 N93-27558
A conventional point of view on active magnetic bearings p 2961 N93-27568
ROTOR DYNAMICS
Active magnetic bearings applied to industrial compressors p 2961 N93-27570
ROTORCRAFT AIRCRAFT
Robust crossfeed design for hovering rotorcraft
[NASA-CR-193107] p 2942 N93-27241
ROTORS
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132
ROVING VEHICLES
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Outline of Mars explorer system p 2953 N93-28048
RUNGE-KUTTA METHOD
Stability of parallel Volterra-Runge-Kutta methods
[CWI-NM-R9207] p 3106 N93-27304
A-stable diagonally implicit Runge-Kutta-Nystrom methods for parallel computers
[CWI-NM-R9208] p 3107 N93-27375
Time-step enlargement for Runge-Kutta integration algorithms by implicit smoothing
[NLR-TP-91229-U] p 3096 N93-27394
Note on the performance of direct and indirect Runge-Kutta-Nystroem methods
[CWI-NM-R9214] p 3120 N93-28082
RUNWAYS
Protection of taxiing traffic in airports through mode S secondary radar technology
[ETN-93-93455] p 2941 N93-28206
RUTHENIUM
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359

S

SABOT PROJECTILES
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator
p 2985 N93-27138
Transient simulation of ram accelerator flowfields
p 2986 N93-27139
Numerical simulations of reactive flows in ram accelerators p 2986 N93-27140
SADDLE POINTS
Number of saddle points of the energy surface in SK spin-glass
[SSCL-PREPRINT-726] p 3134 N93-28099
SAFETY
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
Materials reliability. Technical activities, 1992. (NAS-NRC Assessment Panel, 13-14 May 1993)
[PB93-173466] p 3055 N93-27398
SAFETY FACTORS
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report
p 2983 N93-26976
SAFETY MANAGEMENT
Mission design considerations for nuclear risk mitigation p 2978 N93-26923
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
SALINITY
Geothermal research and development program
[DE93-008400] p 3071 N93-26671
C-vector derived three dimensional circulations in the farallones national marine sanctuary
[AD-A262885] p 3080 N93-28227
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244
SAMPLERS
Mars aqueous chemistry experiment
[NASA-CR-193134] p 3211 N93-27604
SAMPLING
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
Extended task space control for robotic manipulators
[NASA-CASE-NPO-18902-1-CU] p 3052 N93-28129
SANDWICH STRUCTURES
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
SARSAT
COSPAS-SARSAT system: Present operation and development p 3024 N93-26658
SATELLITE ANTENNAS
Choice of antenna geometry for microwave power transmission from solar power satellites
p 2988 N93-27987
SATELLITE ATTITUDE CONTROL
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera
p 2923 N93-27194
Attitude stabilization of bias momentum satellites
p 2923 N93-27195
TechSAT attitude control p 2924 N93-27197
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite
p 2925 N93-27203
SATELLITE COMMUNICATION
The 1992 United Nations Workshop on Space Communication for Development: Proceedings
p 3022 N93-26640
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region
p 3022 N93-26641
Project 21: A new range of personal mobile satellite services p 3022 N93-26642
Iridium: Covering the globe with personal communication p 3022 N93-26644
Digital audio and video broadcasting by satellite
p 3023 N93-26645
Mobile communication via satellite towards the year 2000 p 3023 N93-26646
SOVCAN STAR: An international satellite system
p 3023 N93-26647
Satellite communications for aeronautical and navigation service p 3023 N93-26648
Zohreh: The Iranian domestic satellite system
p 3023 N93-26649
Satellite communication services for Tibet autonomous region by domestic satellite in China
p 3023 N93-26650
Mugunghwa: The first Korean domestic satellite for FSS and DBS services p 3023 N93-26651
Japanese experiments for medical and educational broadcasts by Kiku satellite (PARTNERS Project using ETS-V) p 3024 N93-26652
Worldwide seamless cellular satellite communications: The global mobile communication by Globalstar system
p 3024 N93-26653
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
Data communications service by VSAT network in the Philippines p 3024 N93-26655
Management of the disaster communications by satellite p 3024 N93-26656
Communication service by satellite link in Vietnam
p 3024 N93-26657
Telecommunication service by leased transponders of the regional satellite p 3025 N93-26661
Satellite communication programmes for rural education and development p 3025 N93-26662
A communications system for the United Nations Transitional Authority in Cambodia (UNTAC)
p 3025 N93-26663
Privatization of data communication services by domestic satellite in Thailand p 3025 N93-26664
Satellites and the BISDN: An overview of NASA R/D
[NASA-TM-106108] p 3025 N93-26903
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations
[NASA-TM-106172] p 2956 N93-27064
Mars exploration mission p 2953 N93-28045
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
Information Switching Processor (ISP) contention analysis and control
[NASA-CR-191130] p 2957 N93-28416
SATELLITE CONTROL
Mars revolving observation satellite
p 2953 N93-28047
SATELLITE DESIGN
TechSAT attitude control p 2924 N93-27197
Manned engineering test satellites
p 2948 N93-28016

Conceptual study on manned engineering test satellites p 2949 N93-28017
Artificial gravity experiment satellites p 2949 N93-28018
Linearly connected solar power satellite p 2949 N93-28019
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038
Mars revolving observation satellite p 2953 N93-28047

SATELLITE IMAGERY
Remotely sensed data from space: Distribution, pricing, and applications. An OTA background paper p 3062 N93-27066
A synoptic comparison of special sensor microwave/imager displays with numerical products [AD-A261960] p 3078 N93-27949

SATELLITE INSTRUMENTS
Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198

SATELLITE LIFETIME
Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198

SATELLITE NETWORKS
Dual use of distributed remote sensing satellites [DE93-008852] p 3062 N93-26615
The 1992 United Nations Workshop on Space Communication for Development: Proceedings p 3022 N93-26640
The Advanced Communications Technology Satellite (ACTS): Five new technologies p 3022 N93-26643
Iridium: Covering the globe with personal communication p 3022 N93-26644
SOVCAN STAR: An international satellite system p 3023 N93-26647
Zohreh: The Iranian domestic satellite system p 3023 N93-26649
Telecommunication service by leased transponders of the regional satellite p 3025 N93-26661
Satellite communication programmes for rural education and development p 3025 N93-26662
Privatization of data communication services by domestic satellite in Thailand p 3025 N93-26664
Minimum number of satellites for Earth coverage by a constellation of low-orbit satellites p 2924 N93-27200

SATELLITE OBSERVATION
Dual use of distributed remote sensing satellites [DE93-008852] p 3062 N93-26615
Meteorological Satellite Center Technical Note, no. 25, 1992 [MSC-TN-25] p 3075 N93-26991
The relationship between satellite-derived cloud parameters and measured maximum wind speed in the typhoon genesis stage p 3075 N93-26993
Remotely sensed data from space: Distribution, pricing, and applications. An OTA background paper p 3062 N93-27066
An evaluation of satellite-derived humidity and its relationship to convective development [NASA-CR-193077] p 3077 N93-27262
Desktop publishing in remote sensing [BCRS-92-15] p 3063 N93-27702
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5 [AD-A262117] p 3079 N93-28183
A maritime and continental aerosol-cloud interaction study from ASTEX 1992 [AD-A262088] p 3079 N93-28192
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky [NASA-CR-193075] p 3171 N93-28414

SATELLITE ORBITS
Mars revolving observation satellite p 2953 N93-28047

SATELLITE PERTURBATION
The use of satellites in gravity field determination and model adjustment [ISBN-90-6275-802-9/CIP] p 2973 N93-27946

SATELLITE POWER TRANSMISSION
Systems analysis on laser beamed power [NASA-CR-193206] p 3047 N93-27036
Linearly connected solar power satellite p 2949 N93-28019

SATELLITE ROTATION
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite p 2924 N93-27199

SATELLITE SOUNDING
Derivation of total ozone amount from NOAA/TOVS data p 3071 N93-26997
Adjustment of TIROS operational vertical sounder data to a vertical view [NOAA-TR-NESDIS-64] p 3071 N93-27059
A noise level analysis of special multiple-spin VAS data during storm-fest [NOAA-TR-NESDIS-65] p 3071 N93-27079

SATELLITE TEMPERATURE
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings [NASA-TM-106146] p 2957 N93-27019

SATELLITE TRACKING
An expert system for processing uncorrelated satellite tracks [AD-A262713] p 2954 N93-28395

SATELLITE TRANSMISSION
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations [NASA-TM-106172] p 2956 N93-27064

SATELLITE-BORNE INSTRUMENTS
EOS/AMSU-A NASA/Aerojet Interface Meeting [NASA-TM-108234] p 3063 N93-27288
A broadband THz receiver for low background space applications p 3020 N93-27782

SATELLITE-BORNE PHOTOGRAPHY
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera p 2923 N93-27194

SCALARS
Quantum wormholes and harmonic oscillators p 3144 N93-27338

SCALE MODELS
Development of a material processing plant for lunar soil p 3021 N93-26694
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz p 3014 N93-27749

SCANNING ELECTRON MICROSCOPY
Beneficiation of ilmenite from lunar analog p 2997 N93-26681
Cryogenic ultrahigh vacuum scanning tunneling microscopy [AD-A262264] p 2995 N93-28187
Solid state research [AD-A262273] p 3154 N93-28237

SCANNING TUNNELING MICROSCOPY
Band electronic structures and crystal packing forces [DE93-009763] p 3151 N93-26667
STM tip-induced transitions of dislocation network structures on the surface of highly oriented pyrolytic graphite [AD-A262419] p 3004 N93-27655
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy [AD-A263031] p 3152 N93-27922
Cryogenic ultrahigh vacuum scanning tunneling microscopy [AD-A262264] p 2995 N93-28187
Solid state research [AD-A262273] p 3154 N93-28237

SCATTERING
Towards rotationally state-resolved differential cross sections for the hydrogen exchange reaction [DE93-007735] p 3131 N93-26614
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
Electronic structure theory of alloy phase stability [DE93-009547] p 3000 N93-28232
The Monte Carlo/S(sub N) hybrid method with orthogonal interface basis vectors [DE93-005462] p 3104 N93-28299

SCATTERING AMPLITUDE
Complex geometry and string theory [SSCL-PREPRINT-746] p 3157 N93-28197

SCATTERING CROSS SECTIONS
Comparisons of cross-section predictions for relativistic iron and argon beams with semiempirical fragmentation models [NASA-TM-4462] p 3138 N93-27110
Optical model calculations of 14.6A GeV silicon fragmentation cross sections [NASA-TM-4461] p 3138 N93-27111

SCENE ANALYSIS
Sparse arrangements and the number of views of polyhedral scenes [RUU-CS-92-24] p 3120 N93-28065

SCHEDULING
New lower and upper bounds for scheduling around a small common date [MEMO-COSOR-92-18] p 3093 N93-27246
Minimizing total inventory cost on a single machine in just-in-time manufacturing [MEMO-COSOR-92-20] p 3093 N93-27247
Polynomial-time algorithms for single-machine bicriteria scheduling [MEMO-COSOR-92-21] p 3093 N93-27248
A note on the effect of varying routing probability on two parallel queues with dynamic routing under a threshold-type scheduling [MEME-COSOR-92-08] p 3124 N93-27277
A globally gated polling system with server interruptions, and applications to the repairman problem [CWI-BS-R9208] p 3127 N93-27309
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [MEMO-COSOR-92-32] p 3106 N93-27361
Local search in physical distribution management [MEMO-COSOR-92-30] p 3163 N93-27384
Priority inheritance in real-time micro kernels [MEMO-INF-92-52] p 3095 N93-27387
Approximate analysis of an M/G/1 priority queue with priority changes due to impatience [CWI-BS-R9202] p 3127 N93-27606
Optimal server assignment in the case of service times with monotone failure rates [TW-92-04] p 3125 N93-27906
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness [AD-A263033] p 3084 N93-27923
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [CWI-BS-R9211] p 3108 N93-27990

SCHOOLS
Mathematics as technology: Mathematical engineering [CWI-AM-R9202] p 3113 N93-27296
Digest of education statistics, 1992 [PB93-169522] p 3161 N93-27420
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 12: Armstrong Laboratory [AD-A262020] p 3161 N93-27598
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 13: Phillips Laboratory [AD-A262021] p 3161 N93-27599
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 14: Rome Laboratory [AD-A262022] p 3161 N93-27600
Summer research program (1992). High School Apprenticeship Program (HSAP) reports. Volume 15: Wright Laboratory [AD-A262023] p 3162 N93-27601
Third Annual Women in Science and Technology Conference [DE93-005271] p 3164 N93-28297

SCHOTTKY DIODES
The development of hydrogen sensor technology at NASA Lewis Research Center [NASA-TM-106141] p 3045 N93-27021
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Superlattice barrier varactors p 3012 N93-27738
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
Progress in integrated-circuit horn antennas for receiver applications. Part 2: A 90 GHz quasi-integrated horn antenna receiver p 3016 N93-27756
Monolithic millimeter-wave diode grid frequency multiplier arrays p 3019 N93-27775
Planar GaAs diodes for THz frequency mixing applications p 3019 N93-27776
New approach to the design of Schottky barrier diodes for THz mixers p 3019 N93-27778
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781
All-solid-state radiometers for environmental studies to 700 GHz p 3020 N93-27784

A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785

SCHROEDINGER EQUATION

Wave packet motion in harmonic potential and computer visualization p 3141 N93-27315

Alternative descriptions of wave and particle aspects of the harmonic oscillator p 3142 N93-27317

Boundary conditions in tunneling via quantum hydrodynamics p 3143 N93-27327

Localized solutions of N + 1 dimensional evolution equations

[SSCL-PREPRINT-753] p 3157 N93-28210

SCHWARZSCHILD METRIC

Spinning particles in Schwarzschild space-time

[NIKHEF-H/92-09] p 3156 N93-27511

SCIENTISTS

Third Annual Women in Science and Technology Conference

[DE93-005271] p 3164 N93-28297

SCINTILLATION

Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes

[AD-A262091] p 3028 N93-28190

Study of intermediates from transition metal excited-state electron-transfer reactions

[DE93-010904] p 3137 N93-28359

SCINTILLATION COUNTERS

Radiation interaction and detection principles

[DE93-005302] p 3136 N93-28298

SEA BREEZE

Sea breeze simulation with a static profile of the eddy viscosity

[FOA-B-40415-4.5] p 3078 N93-27831

SEA ICE

Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates

[NASA-CR-193027] p 3073 N93-28137

Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0)

[AD-A262794] p 3081 N93-28377

SEA KEEPING

HMS Speedy: Seakeeping trials, 25 February to 1 March 1982

[ARE-AMTE(H)-R84117] p 3021 N93-27853

SEA STATES

A real-time wave data quality control algorithm

[KNMI-TR-139] p 3080 N93-27637

SEA SURFACE TEMPERATURE

Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5

[AD-A262117] p 3079 N93-28183

Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method p 3074 N93-28249

SEA WATER

Free boundary problems in fresh-salt groundwater flow

[REPT-92-45] p 3041 N93-27882

SEALING

Oxygen production on Mars and the Moon p 3021 N93-26683

SECONDARY FLOW

Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187

SECONDARY ION MASS SPECTROMETRY

Accelerator Mass Spectrometry facility (AMS)

[AD-A262458] p 3134 N93-27829

Oxygen isotopes implanted in the LDEF spacecraft p 2997 N93-28256

Development of germanium-silicon growth technology

[AD-A262891] p 3154 N93-28304

SEDIMENTS

Organic geochemistry of continental margin and deep ocean sediments

[DE93-011045] p 3080 N93-28336

SEGMENTS

Second quantization in bit-string physics p 3146 N93-27357

SEISMIC ENERGY

Analysis of seismograms from nuclear explosions of known yield at Degelen Mountain and Konystan in east Kazakhstan, USSR

[AWE-O-2/92] p 3073 N93-27703

SEISMIC WAVES

Analysis of seismograms from nuclear explosions of known yield at Degelen Mountain and Konystan in east Kazakhstan, USSR

[AWE-O-2/92] p 3073 N93-27703

Migration of seismic data in the double Radon transformed domain

[ETN-93-93596] p 3073 N93-28094

Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models

[AD-A263209] p 3075 N93-28384

SEISMOGRAMS

Analysis of seismograms from nuclear explosions of known yield at Degelen Mountain and Konystan in east Kazakhstan, USSR

[AWE-O-2/92] p 3073 N93-27703

Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models

[AD-A263209] p 3075 N93-28384

SEISMOLOGY

GPS measurements at Vandenberg, AFB

[AD-A262280] p 2941 N93-28241

SELECTION

The best variety or an almost best one? A comparison of subset selection procedures

[MEMO-COSOR-92-22] p 3123 N93-27237

Extensions of choice behaviour

[MEMO-COSOR-92-23] p 3163 N93-27280

SELF ORGANIZING SYSTEMS

The construction of minimal multi-layered perceptrons: A case study for sorting

[MEMO-COSOR-92-14] p 3112 N93-27233

Exact classification with two-layered perceptrons

[MEMO-COSOR-92-25] p 3112 N93-27273

The minimal number of layers of a perceptron that sorts

[MEMO-COSOR-92-06] p 3112 N93-27275

SEMANTICS

A theory of first-order built-in's of PROLOG

[CWI-CS-R9216] p 3093 N93-27255

Transition systems and dynamic semantics

[CWI-CS-R9217] p 3094 N93-27256

Real time process algebra with prefixed integration

[CWI-CS-R9219] p 3114 N93-27362

A comparison of OBJ3 and ASF + SDF

[CWI-CS-R9223] p 3094 N93-27363

Using cached functions and constructors for incremental attribute evaluation

[RUU-CS-92-11] p 3094 N93-27369

Termination of term writing by interpretation

[RUU-CS-92-14] p 3114 N93-27381

Comparative transition system semantics

[CWI-CS-R9222] p 3095 N93-27389

An executable semantics for a subset of COLD

[CWI-CS-R9145] p 3097 N93-27493

Towards a design theory for database triggers

[CWI-CS-R9201] p 3166 N93-27494

Bisimulation semantics for concurrency with atomicity and action refinement

[CWI-CS-R9210] p 3116 N93-27498

Processes as terms: Non-well-founded models for bisimulation

[CWI-CS-R9211] p 3097 N93-27499

A simple specification language combining processes, time, and data

[CWI-CS-R9209] p 3097 N93-27525

Asynchronous communication in process algebra (extended abstract)

[CWI-CS-R9206] p 3098 N93-27551

Computable processes and bisimulation equivalence

[CWI-CS-R9207] p 3098 N93-27552

Index expression belief networks for information disclosure

[TR-92-12] p 3167 N93-27915

Index expression belief networks for information disclosure

[RUU-CS-92-21] p 3167 N93-27929

Origin tracking

[CWI-CS-R9230] p 3100 N93-27994

Regular processes with relative time and silent steps

[CWI-CS-R9231] p 3101 N93-27995

Specification and generation of a lambda-calculus environment

[CWI-CS-R9233] p 3101 N93-27997

Dynamic modal predicate logic

[CWI-CS-R9237] p 3101 N93-28001

Current trends in the semantics of dataflow

[RUU-CS-92-22] p 3167 N93-28063

Semantic models for distributed data base management. Part 1: Development of a metamodel for fragmentation

[REPT-92-33] p 3168 N93-28390

SEMICONDUCTOR DEVICES

Innovative sputtering techniques for CIS and CdTe submodule fabrication

[DE93-000085] p 3065 N93-27626

Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator

[AD-A262352] p 3031 N93-27645

Spinning-current method for offset reduction in silicon Hall plates

[ISBN-90-6275-780-4/CIP] p 3152 N93-27873

Transport of electron-waves and single-charges in semiconductor nanostructures

[ETN-93-93609] p 3031 N93-27880

Workshop on Optical Properties of Mesoscopic Semiconductor Structures

[AD-A263024] p 3147 N93-27912

Study of switching transients in high frequency converters

[NASA-CR-193105] p 3032 N93-28327

SEMICONDUCTOR DIODES

Optoelectronic Materials Center: A collaborative program including University of New Mexico, Stanford University and California Institute of Technology

[AD-A262377] p 3147 N93-27695

SEMICONDUCTOR JUNCTIONS

Fast interfacial electron transfer: Evidence for inverted region kinetic behavior

[AD-A262434] p 3133 N93-27658

A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions p 3013 N93-27743

SEMICONDUCTORS (MATERIALS)

Silicon carbide semiconductor technology for high temperature and radiation environments p 2978 N93-26928

A Petrov-Galerkin mixed finite element method with exponential fitting

[CWI-NM-R9204] p 3113 N93-27301

Incomplete Line LU for discretized coupled PDE's as preconditioner in Bi-CGSTAB

[CWI-NM-R9213] p 3031 N93-27367

Investigation of a new concept in semiconductor microwave oscillators: The contiguous domain oscillator

[AD-A262352] p 3031 N93-27645

Innovative optoelectronic materials and structures using OMVPE

[AD-A262202] p 3152 N93-27683

Development of model based magnetic LP-LEC growth of large diameter GaAs

[AD-A262361] p 3152 N93-27690

Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736

Superlattice barrier varactors p 3012 N93-27738

A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739

Workshop on Optical Properties of Mesoscopic Semiconductor Structures

[AD-A263024] p 3147 N93-27912

Nonlinear Optics: Materials, Fundamentals, and Applications. Postdeadline papers

[AD-A261807] p 3147 N93-28123

Long lifetime silicon photoconductive semiconductor switches

[DE93-006757] p 3032 N93-28150

Solid state x ray detector calibration techniques and linac beam intensity measurements

[AD-A262097] p 3153 N93-28177

Electron transfer reactions in microporous solids

[DE93-011261] p 3154 N93-28216

Magnetic properties and critical behavior of the conductivity near the M-I transition

[DE93-011437] p 3032 N93-28217

Rapid Thermal Processing (RTP) of semiconductors in space

[NASA-CR-193110] p 3009 N93-28408

SENSITIVITY

Sensitivity calculations for a 2D, inviscid, supersonic forebody problem

[NASA-CR-191444] p 2928 N93-27004

SENSORS

The development of hydrogen sensor technology at NASA Lewis Research Center

[NASA-TM-106141] p 3045 N93-27021

Fiber-optic shock position sensor

[DE93-009607] p 3045 N93-27625

SENSORY PERCEPTION

Theory of signal detection and its application to visual target acquisition: A review of the literature

[AD-A262920] p 3085 N93-28307

SEPARATED FLOW

An aerodynamic model for one and two degree of freedom wing rock of slender delta wings

[NASA-CR-193130] p 2930 N93-27150

Calculations of turbulent separated flows

[NASA-TM-106154] p 3039 N93-27161

Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448

Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451

Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452

Dynamic airfoil stall investigations p 2935 N93-27453

Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455
Plume effects on the flow around a blunted cone at hypersonic speeds p 2936 N93-27460
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189

SEPARATION
Investigation of separation in a strap-on Space Shuttle system
[AD-A262372] p 2956 N93-27693

SEPARATORS
Beneficiation of ilmenite from lumar analog
p 2997 N93-26681
Magnetic beneficiation of lunar soils
p 3213 N93-27968

SEQUENCING
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007
A globally gated polling system with server interruptions, and applications to the repairman problem
[CWI-BS-R9208] p 3127 N93-27309
Priority inheritance in real-time micro kernels
[MEMO-INF-92-52] p 3095 N93-27387
Analysing E(sub k)/E(sub r)/c queues
[MEMO-COSOR-92-27] p 3127 N93-27396
Some experiments in transforming towards parallel executability
[TR-92-08] p 3107 N93-27903

SERIES (MATHEMATICS)
The construction of minimal multi-layered perceptrons: A case study for sorting
[MEMO-COSOR-92-14] p 3112 N93-27233
Exact classification with two-layered perceptrons
[MEMO-COSOR-92-25] p 3112 N93-27273
The minimal number of layers of a perceptron that sorts
[MEMO-COSOR-92-06] p 3112 N93-27275
On transfinite abstract reduction systems
[CWI-CS-R9205] p 3117 N93-27550

SERIES EXPANSION
Asymptotic estimates of Stirling numbers
[CWI-AM-R9204] p 3113 N93-27310
Wigner expansions for partition functions of nonrelativistic and relativistic oscillator systems
p 3145 N93-27343

SERVICE LIFE
Regenerable biocide delivery unit, volume 1
[NASA-CR-185701] p 3081 N93-27122
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders
[PB93-165835] p 3057 N93-27417
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184

SERVOCONTROL
Parallel manipulators. Part 5: Determination of the workspace for a constant orientation
[INRIA-RR-1645] p 3053 N93-28439

SERVOMECHANISMS
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160

SET THEORY
The best variety or an almost best one? A comparison of subset selection procedures
[MEMO-COSOR-92-22] p 3123 N93-27237
New lower and upper bounds for scheduling around a small common date
[MEMO-COSOR-92-18] p 3093 N93-27246
Exact classification with two-layered perceptrons
[MEMO-COSOR-92-25] p 3112 N93-27273
Subset selection: Robustness and imprecise selection
[MEMO-COSOR-92-10] p 3124 N93-27279
Extensions of choice behaviour
[MEMO-COSOR-92-23] p 3163 N93-27280
Characteristic sets in commutative algebra: An overview
[MEMO-COSOR-92-24] p 3112 N93-27281
The design of chip architectures for accurate inner product computation
[ISBN-9-09-005204-6] p 3090 N93-27372
On Hamiltonian properties of 2-tough graphs
p 3115 N93-27471
Toughness and the cycle structure of graphs
p 3115 N93-27472
A primitive recursive set theory and AFA: On the logical complexity of the largest bisimulation
[CWI-CS-R9213] p 3097 N93-27501
On ranks of twists of elliptic curves and power-free values of binary forms
[W-9213] p 3118 N93-27868
The set of super-stable marriages forms a distributive lattice
[MEMO-1052] p 3125 N93-27907
Measurability of operators
[W-9203] p 3125 N93-27930
Cuttings and applications
[RUU-CS-92-26] p 3122 N93-28166

SEYFERT GALAXIES
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask
p 3173 N93-26719
HST/FOS spectra of PG 1351+64: An intrinsic absorber at low redshift p 3180 N93-26761
The environments of Seyfert and Markarian galaxies
p 3185 N93-26789
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Infrared coronal emission lines and the possibility of their maser emission in Seyfert nuclei p 3196 N93-26853
Influence of the active nucleus on the multiphase interstellar medium in NGC 1068 p 3196 N93-26854
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects
p 3197 N93-26857
IUEAGN: A database of ultraviolet spectra of active galactic nuclei p 3197 N93-26858
High resolution 1-20 micron imaging of the nuclear environment of NGC 1068 p 3197 N93-26859
Long slit spectroscopy of NGC 5506
p 3198 N93-26861
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863

SHADOWGRAPH PHOTOGRAPHY
A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123

SHALES
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236

SHALLOW WATER
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179

SHAPES
Fiber shape effects on metal matrix composite behavior
[NASA-TM-106067] p 2989 N93-26704
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem
p 3188 N93-26810
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
A composite structured/unstructured-mesh Euler method for complex airfoil shapes p 2933 N93-27439
Experimental and computational ice shapes and resulting drag increase for a NACA 0012 airfoil
p 2933 N93-27440
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467

SHEAR
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296

SHEAR FLOW
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097

SHEAR LAYERS
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble
p 2936 N93-27457
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610

SHEAR PROPERTIES
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682
Plastic deformation of granular materials
[AD-A262449] p 3058 N93-27826
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207

SHEAR STRAIN
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075

SHEAR STRENGTH
Determination of plate wave velocities and diffuse field decay rates with braod-band acousto-ultrasonic signals
[NASA-TM-106158] p 3055 N93-27080

SHEAR STRESS
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428

SHELL GALAXIES
Gas distribution and starbursts in shell galaxies
p 3183 N93-26780

SHIPS
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
HMS Speedy: Seakeeping trials, 25 February to 1 March 1982
[ARE-AMTE(H)-R84117] p 3021 N93-27853

SHOCK FRONTS
Fiber-optic shock position sensor
[DE93-009607] p 3045 N93-27625

SHOCK HEATING
The ISM in the M82 starburst p 3202 N93-26887

SHOCK LAYERS
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455

SHOCK WAVES
Calibration of a shock wave position sensor using artificial neural networks
[NASA-TM-106138] p 3045 N93-27001
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
Godunov-type schemes applied to detonation flows
[NASA-CR-191447] p 2929 N93-27090
On steady, inviscid shock waves at continuously curved, convex surfaces
[CWI-NM-R9202] p 3039 N93-27299
The importance of sterically hindered shear in determining the sensitivity of explosive crystals
[DE93-003861] p 3009 N93-28296
Rocket engine nozzle attenuator
[NASA-CASE-MFS-28739-1] p 2987 N93-28324

SHUTTLE DERIVED VEHICLES
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592

SIDEBANDS
Slot antenna SIS mixers for submillimeter wavelengths
p 3014 N93-27745
Measurements of the single sideband suppression for a 650 GHz heterodyne receiver p 3020 N93-27780

SIDELOBES
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744

SIGNAL ANALYSIS
A 200 GHz tripler using single barrier varactor
p 3013 N93-27740
Description of an adder board
[TR-92-09] p 3027 N93-27904

SIGNAL DETECTION
Increased fire and toxic contaminant detection responsibility by use of distributed, aspirating sensors
p 2965 N93-27722
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307

SIGNAL DETECTORS
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153

SIGNAL ENCODING
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073

SIGNAL FADING
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071
SIGNAL PROCESSING
Analog signal isolation techniques
[DE93-008059] p 3147 N93-27524
Ultra-wideband radar transient detection using time-frequency and wavelet transforms
[AD-A262154] p 3026 N93-27549
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
Adaptive filtering methods: On methods to use a priori information in order to reduce complexity while maintaining convergence properties
[ISBN-90-9005143-0] p 3121 N93-28109
Filtering, statistical signal processing and variational problems
[AD-A262276] p 3028 N93-28238
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
Computer simulation studies of two-dimensional beamforming for linear arrays using a parallel computer system
[AD-A262712] p 3108 N93-28394
Statistical techniques for signal processing
[AD-A262731] p 3126 N93-28400
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403
SIGNAL RECEPTION
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations
[NASA-TM-106172] p 2956 N93-27064
SIGNAL TO NOISE RATIOS
Performance evaluation of UHF fading satellite channel by simulation for different modulation schemes
[AD-A262091] p 3028 N93-28190
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
SIGNAL TRANSMISSION
Description of an adder board
[TR-92-09] p 3027 N93-27904
SIGNATURES
Globular cluster formation in merging galaxies?
p 3175 N93-26729
The search for cold dark matter using germanium detectors p 3205 N93-28250
SILANES
Stability and reactivity of dimethylethoxysilane
p 2997 N93-28258
SILICA GEL
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
SILICA GLASS
Optical bleaching of bismuth implanted silica glass: A threshold effect
[DE93-009716] p 3007 N93-28436
SILICATES
Experimental study of the electrolysis of silicate melts
p 2997 N93-26679
Glasses, ceramics, and composites from lunar materials p 3214 N93-27971
SILICIDES
Niobium silicides for high temperature applications
[AD-A262334] p 2991 N93-28113
SILICON
Silicon-Film(tm) on ceramic solar cells
[DE93-009608] p 3065 N93-27108
Optical model calculations of 14.6A GeV silicon fragmentation cross sections
[NASA-TM-4461] p 3138 N93-27111
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Structure and properties of novel compounds of silicon, germanium and tin
[AD-A262445] p 3133 N93-27696
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
SILICON CARBIDES
Silicon carbide semiconductor technology for high temperature and radiation environments
p 2978 N93-26928
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Exploration of multilayer concepts for oxidation protection of carbon-carbon composites
[AD-A262380] p 2991 N93-27653
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
SILICON DIOXIDE
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Silazine to silica p 2997 N93-28257
Stability and reactivity of dimethylethoxysilane
p 2997 N93-28258
Characterization of thermal annealed Bi implanted silica
[DE93-009712] p 3005 N93-28318
SILICON FILMS
Diamond composite films for protective coatings on metals and method of formation
[NASA-CASE-NPO-18501-1-CU] p 3006 N93-28426
SILICON NITRIDES
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Slot-line end-fire antennas for THz frequencies
p 3015 N93-27751
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
SILICON OXIDES
Structure property relationships of nanometer size metal clusters in glasses
[DE93-007922] p 3002 N93-26672
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
Slot-line end-fire antennas for THz frequencies
p 3015 N93-27751
SILICONES
Silazine to silica p 2997 N93-28257
SILVER
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
SILVER ZINC BATTERIES
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
SIMD (COMPUTERS)
Some experiments in transforming towards parallel executability
[TR-92-08] p 3107 N93-27903
SIMULATED ANNEALING
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
SIMULATION
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble
p 2936 N93-27457
Processes as terms: Non-well-founded models for bisimulation
[CWI-CS-R9211] p 3097 N93-27499
SIMULATORS
Rocket engine numerical simulator
p 2981 N93-26962
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
SINGLE CRYSTALS
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
Fatigue in single crystal nickel superalloys
[AD-A262126] p 2999 N93-27674
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056
Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114
Motion-sensitive optical correlator
[NASA-CASE-NPO-18769-1-CU] p 3148 N93-28133
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
SINGULARITY (MATHEMATICS)
Explicit robust schemes for implementation of a class of principal value-based constitutive models: Symbolic and numeric implementation
[NASA-TM-106124] p 3089 N93-26946
Operator algebra from fusion rules 2: Implementing apparent singularities
[NIKHEF-H/92-06] p 3155 N93-27307
Wavelet local extrema applied to image processing
[AD-A262362] p 3118 N93-27691
Numerical models of plane-symmetric spacetimes with applications to gravity-wave collisions
p 3204 N93-28081
SINTERING
Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270
Effects of composition on sintering of current interconnects in SOFC
[DE93-004837] p 3065 N93-27613
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229
SIS (SEMICONDUCTORS)
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions
p 3013 N93-27743
SIS (SUPERCONDUCTORS)
A 200 GHz tripler using single barrier varactor
p 3013 N93-27740
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744
Slot antenna SIS mixers for submillimeter wavelengths
p 3014 N93-27745
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz
p 3014 N93-27749
A low-noise 492 GHz SIS waveguide receiver
p 3015 N93-27750
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758
Embedding impedance approximations in the analysis of SIS mixers p 3016 N93-27760
Sub micron area Nb/AlO(x)/Nb tunnel junctions for submillimeter mixer applications p 3016 N93-27761
Fabrication and characterization of high current-density, submicron, NbN/MgO/NbN tunnel junctions
p 3017 N93-27763
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Submillimeter wave detection with superconducting tunnel diodes p 3018 N93-27769
Evaluation of integrated tuning elements with SIS devices p 3018 N93-27770
Source conductance scaling for high frequency superconducting quasiparticle receivers
p 3018 N93-27771
SISO (CONTROL SYSTEMS)
Control design for the SERC experimental testbed
p 3058 N93-27891
Nonlinear H(sub infinity) almost disturbance decoupling
[MEMO-1066] p 3110 N93-28075
SITE SELECTION
Los Alamos studies of the Nevada test site facilities for the testing of nuclear rockets p 2954 N93-26966

Bibliography of the Maryland Power Plant Research Program, fourteenth edition
[PB93-174241] p 3068 N93-27404

SKIN FRICTION
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226

SKY SURVEYS (ASTRONOMY)
The nature of faint emission-line galaxies
p 3173 N93-26716
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
Distant radio galaxies in the near IR
p 3177 N93-26742
Massive low surface brightness galaxies
p 3178 N93-26746
A faint field-galaxy redshift survey in quasar fields
p 3179 N93-26751
Interstellar Mg II and C IV absorption by 1 1/2 galaxies along the sightline to MrK 205 p 3182 N93-26770
Ultraviolet Imaging Telescope (UIT) observations of galaxies p 3184 N93-26785
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
A radio continuum survey of edge-on spiral galaxies at 90 cm p 3185 N93-26790
Dust and ionized gas in elliptical galaxies: Signatures of merging collisions p 3186 N93-26799
Molecular gas content of galaxies in the Hydra-Centaurus supercluster p 3188 N93-26807
The critical density for star formation in HII galaxies
p 3189 N93-26817
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects
p 3197 N93-26857
IUEAGN: A database of ultraviolet spectra of active galactic nuclei p 3197 N93-26858
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds
p 3201 N93-26878
Multi-filter spectrophotometry simulations
p 3201 N93-26881
Cordoba Durchmusterung, volume 1
[NASA-RP-1299-VOL-1] p 3170 N93-27116
Cordoba Durchmusterung, volume 2
[NASA-RP-1299-VOL-2] p 3170 N93-27117
Cordoba Durchmusterung, volume 3
[NASA-RP-1299-VOL-3] p 3170 N93-27118
Cordoba Durchmusterung, volume 4
[NASA-RP-1299-VOL-4] p 3170 N93-27119
Bonner Durchmusterung, volume 1
[NASA-RP-1297-VOL-1] p 3170 N93-27382
Bonner Durchmusterung, volume 2
[NASA-RP-1297-VOL-2] p 3170 N93-27383
Supporting research and technology activities in the preparation of a three-dimensional map of the infrared sky
[NASA-CR-193075] p 3171 N93-28414

SKY WAVES
Auroral-E observations: The first year's data
[AD-A263158] p 3074 N93-28308

SLEEP DEPRIVATION
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923

SLENDER BODIES
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250

SLENDER WINGS
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150

SLIDING
Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410

SLIDING FRICTION
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364

SLOT ANTENNAS
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
Moment method analysis of linearly tapered slot antennas
[NASA-CR-191474] p 2955 N93-27261
Microwave characterization of slotline on high resistivity silicon for antenna feed network
[NASA-TM-106058] p 3031 N93-27265
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
Slot antenna SIS mixers for submillimeter wavelengths
p 3014 N93-27745
Slot-line end-fire antennas for THz frequencies
p 3015 N93-27751
Double-slot antennas on extended hemispherical dielectric lenses p 3016 N93-27759

SMALL SCIENTIFIC SATELLITES
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290

SMART STRUCTURES
Growing the Space Station's electrical power plant
p 2969 N93-27810
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167
Intelligent structures technology p 3061 N93-28176
Demonstration and fabrication of large area 1-3 PZT composite panels
[AD-A262904] p 2992 N93-28305

SMOKE
Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model
[DOT/FAA/CT-89/25] p 2941 N93-28055

SMOKE DETECTORS
Increased fire and toxic contaminant detection responsibility by use of distributed, aspirating sensors
p 2965 N93-27722

SOCIAL FACTORS
The challenges and benefits of lunar exploration
p 3211 N93-27957

SOFTENING
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110

SOFTWARE ENGINEERING
DADiSP processing guide p 2947 N93-26949
Considerations for control system software verification and validation specific to implementations using distributed processor architectures
[DE93-007920] p 3090 N93-27051
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
International survey of industrial applications of formal methods. Volume 1: Purpose, approach, analysis, and conclusions
[PB93-178556] p 3010 N93-27517
International survey of industrial applications of formal methods. Volume 2: Case studies
[PB93-178564] p 3010 N93-27518
DEFMEF predesign document
[NLR-TP-91269-U] p 3098 N93-27543
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593
Software quality and testing: What DOD can learn from commercial practices
[AD-A262332] p 3099 N93-27652
An examination of selected software testing tools:
[AD-A261941] p 3099 N93-27665
Space Station Freedom Software Support Environment p 2964 N93-27706
An overview of MCC and its research
p 2965 N93-27717
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Advanced automation of a prototypic thermal control system for Space Station p 2972 N93-27846
Data management system technology discipline
p 2972 N93-27857
Flexible control techniques for a lunar base
p 3111 N93-27981
An integrated environment for the development of scientific and engineering applications
[AD-A262277] p 3103 N93-28239
Improvements to the high-frequency benchmark propagation analysis program
[AD-A262278] p 3103 N93-28240
Repository-Based Software Engineering Program: Working Program Management Plan
[NASA-CR-193113] p 3104 N93-28319
The theory of interface slicing
[NASA-CR-193108] p 3104 N93-28320
The repository-based software engineering program: Redefining AdaNET as a mainstream NASA source
[NASA-CR-193114] p 3104 N93-28328

SOFTWARE RELIABILITY
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
Development of a software safety process and a case study of its use
[NASA-CR-193159] p 3094 N93-27291
An analytical solution to the consistency problem for the Littlewood model in software reliability
[CWI-BS-R9129] p 3096 N93-27392
Software quality and testing: What DOD can learn from commercial practices
[AD-A262332] p 3099 N93-27652

SOFTWARE REUSE
Repository-Based Software Engineering Program: Working Program Management Plan
[NASA-CR-193113] p 3104 N93-28319
The theory of interface slicing
[NASA-CR-193108] p 3104 N93-28320
The repository-based software engineering program: Redefining AdaNET as a mainstream NASA source
[NASA-CR-193114] p 3104 N93-28328

SOFTWARE TOOLS
Parallel programming with PCN
[DE93-008087] p 3105 N93-26627
CDM analysis
[NASA-CR-193132] p 3106 N93-27149
Validation of structure metrics: A case study
[MEMO-INF-92-58] p 3096 N93-27491
DEFMEF predesign document
[NLR-TP-91269-U] p 3098 N93-27543
XlnPosse: Structural simulation for graphics hardware
[CWI-CS-R9208] p 3098 N93-27553
An examination of selected software testing tools:
[AD-A261941] p 3099 N93-27665
GWB: Manual for the Grammar Work Bench, version 1.0
[TR-91-28] p 3100 N93-27885
The Grammar Workbench. A first step towards Lingware engineering
[TR-92-06] p 3100 N93-27902
The second Garnet compendium: Collected papers 1990-1992
[AD-A262696] p 3102 N93-28118
An astrophysics data program investigation of spatial structure of supernova remnants
[NASA-CR-193104] p 3205 N93-28409

SOI (SEMICONDUCTORS)
Quantum transport of electrons in nanostructured silicon MOSFET's
[ETN-93-93597] p 3031 N93-27871

SOIL MOISTURE
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057

SOILS
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605

SOL-GEL PROCESSES
Sol-gel preparation of ion-conducting ceramics for use in thin films
[DE93-007720] p 3003 N93-27616

SOLAR ACTIVITY
Physics of solar activity
[NASA-CR-193139] p 3217 N93-27114
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513
Solar-geophysical data number 582, February 1993. Part 2: (Comprehensive reports). Data for August 1992 and miscellaneous
[PB93-174043] p 3218 N93-27514
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827

SOLAR ARRAYS
A photovoltaic catenary-tent array for the Martian surface
[NASA-CR-191144] p 2976 N93-26703
Solar array electrical performance assessment for Space Station Freedom
[NASA-TM-106161] p 2984 N93-27039
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
A PWM current-source inverter for interconnection between a photovoltaic array and the utility line
[EUT-91-E-253] p 3065 N93-27227
Electrical power system WP-04 p 2968 N93-27804
Miniaturized Cassegrainian solar array development
p 2968 N93-27808

Fuel cell technology for lunar surface operations
p 3067 N93-27965
Atomic oxygen effects on LDEF experiment AO171
p 3138 N93-28281

SOLAR CELLS
Diffusion length variation in 0.5- and 3-MeV-proton-irradiated, heteroepitaxial indium phosphide solar cells
[NASA-TM-106147] p 3030 N93-27002
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
Silicon-Film(tm) on ceramic solar cells
[DE93-009608] p 3065 N93-27108
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626
High efficiency low cost GaAs/Ge cell technology
p 2968 N93-27809
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules
p 3066 N93-27962
Linearly connected solar power satellite
p 2949 N93-28019
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-000084] p 3065 N93-28056
Study of the Staebler-Wronski degradation effect in a-Si:H based p-i-n solar cell
[NASA-CR-193076] p 3066 N93-28406

SOLAR COLLECTORS
Advanced solar dynamic technology program
p 2968 N93-27806
Advanced photovoltaic power systems using tandem GaAs/GaSb concentrator modules
p 3066 N93-27962
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program
[DE93-005743] p 3065 N93-28302

SOLAR COSMIC RAYS
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513

SOLAR CYCLES
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827

SOLAR DYNAMIC POWER SYSTEMS
Space Station Freedom solar dynamic power generation p 2968 N93-27805
Advanced solar dynamic technology program
p 2968 N93-27806
Fuel cell energy storage for Space Station enhancement p 2969 N93-27815

SOLAR ECLIPSES
Annular Solar Eclipse of 10 May 1994
[NASA-RP-1301] p 3169 N93-27057

SOLAR ENERGY
Electrical power integration for lunar operations
p 2988 N93-27966
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060

SOLAR ENERGY CONVERSION
Study of the Staebler-Wronski degradation effect in a-Si:H based p-i-n solar cell
[NASA-CR-193076] p 3066 N93-28406

SOLAR FLARES
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513
Solar-geophysical data number 582, February 1993. Part 2: (Comprehensive reports). Data for August 1992 and miscellaneous
[PB93-174043] p 3218 N93-27514

SOLAR FLUX
Status of the Soviet-American gallium experiment
[DE93-009067] p 3218 N93-28157

SOLAR GENERATORS
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program
[DE93-005743] p 3065 N93-28302

SOLAR GRAVITATION
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079

SOLAR MAGNETIC FIELD
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827

SOLAR NEIGHBORHOOD
Heavy element abundances and massive star formation p 3172 N93-26709
Far-infrared line images of dwarf galaxies
p 3186 N93-26797

SOLAR NEUTRINOS
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095
Status of the Soviet-American gallium experiment
[DE93-009067] p 3218 N93-28157

SOLAR OBSERVATORIES
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029

SOLAR PHYSICS
Investigation of solar active regions at high resolution by balloon flights of the solar optical universal polarimeter, extended definition phase
[NASA-CR-192555] p 3217 N93-27029

SOLAR POWER SATELLITES
Choice of antenna geometry for microwave power transmission from solar power satellites
p 2988 N93-27987
Linearly connected solar power satellite
p 2949 N93-28019

SOLAR RADIATION
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Observations of IRAS F10214+4724 at the Nobeyama millimeter array p 3187 N93-26802
The ISM in the M82 starburst p 3202 N93-26887
Powering the superwind in NGC 253
p 3203 N93-26893
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite
p 2924 N93-27199
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537
Spectral infrared hemispherical reflectance measurements for LDEF tray clamps
p 3149 N93-28270
Optical characterization of LDEF contaminant film
p 3149 N93-28274

SOLAR RADIATION SHIELDING
Contamination measurements on experiment M0003
p 2998 N93-28273

SOLAR RADIO BURSTS
Solar-geophysical data number 582, February 1993. Part 2: (Comprehensive reports). Data for August 1992 and miscellaneous
[PB93-174043] p 3218 N93-27514

SOLAR RADIO EMISSION
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513

SOLAR REFLECTORS
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program
[DE93-005743] p 3065 N93-28302

SOLAR SAILS
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite
p 2925 N93-27203

SOLAR SIMULATORS
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201

SOLAR SPECTRA
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889

SOLAR SYSTEM
Spacewatch discovery of near-Earth asteroids
p 3205 N93-26691

SOLAR WIND
Abundance of He-3 and other solar-wind-derived volatiles in lunar soil p 3209 N93-26692
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Ultraviolet resonance radiation and the structure of the heliosphere p 3218 N93-28079
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program
[DE93-005743] p 3065 N93-28302

SOLAR X-RAYS
Solar-geophysical data number 582, February 1993. Part 2: (Comprehensive reports). Data for August 1992 and miscellaneous
[PB93-174043] p 3218 N93-27514

SOLDERS
A maskless flip-chip solder bumping technique
[DE93-009631] p 3021 N93-28372

SOLID ELECTROLYTES
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229

SOLID FUELS
SOFC chromite sintering and electrolyte/air-electrode interface reactions
[DE93-008260] p 2995 N93-28229

SOLID MECHANICS
Institute for Computational Mechanics in Propulsion (ICOMP)
[NASA-TM-106155] p 3111 N93-27061

SOLID PROPELLANT COMBUSTION
Aerospace applications of metal combustion
p 2920 N93-27175
Prediction of propellant behavior in spinning flow of a space motor p 2923 N93-27193
Computer-aided surface regression analysis
p 2927 N93-27217
The effects of small changes in the input data on the determination of closed-bomb burning rates and surface area
[AD-A261969] p 3156 N93-27952

SOLID PROPELLANT IGNITION
Aerospace applications of metal combustion
p 2920 N93-27175

SOLID PROPELLANT ROCKET ENGINES
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
Prediction of propellant behavior in spinning flow of a space motor p 2923 N93-27193
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215

SOLID ROCKET PROPELLANTS
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
Computer-aided surface regression analysis
p 2927 N93-27217

SOLID SOLUTIONS
Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216

SOLID STATE
Solid state research
[AD-A262874] p 3154 N93-28247

SOLID STATE DEVICES
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Solid state x ray detector calibration techniques and linac beam intensity measurements
[AD-A262097] p 3153 N93-28177
Solid state research
[AD-A262273] p 3154 N93-28237
Solid state research
[AD-A262874] p 3154 N93-28247

SOLID STATE LASERS
Thermal management in gas cooled solid state laser disk amplifiers
[DE93-009241] p 3048 N93-28230
Solid state research
[AD-A262874] p 3154 N93-28247

SOLID STATE PHYSICS
Solid state research
[AD-A262273] p 3154 N93-28237
Solid state research
[AD-A262874] p 3154 N93-28247
Research investigation directed toward extending the useful range of the electromagnetic spectrum
[AD-A262704] p 3028 N93-28393

SOLID WASTES
Alternative processes for water reclamation and solid waste processing in a physical/chemical bioregenerative life support system p 2965 N93-27721

SOLID-SOLID INTERFACES
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346

SOLIDIFICATION
Experiment/facility requirements document for the Space Station Furnace Facility. Section 1: Integrated configuration
[NASA-CR-192533] p 2958 N93-27147

SOLIDS
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110
X ray and gamma ray spectroscopy of solids under pressure
[DE93-010966] p 2996 N93-28360
SOLIDS FLOW
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
SOLITARY WAVES
Non-isospectral extension of the chiral model and its geometry
[SSCL-PREPRINT-735] p 3128 N93-28101
Localized solutions of N + 1 dimensional evolution equations
[SSCL-PREPRINT-753] p 3157 N93-28210
SOLUTES
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309
SOLVENTS
Simulations of solvent effects on confined electrolytes
[AD-A262294] p 3133 N93-27677
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010
Monte Carlo simulations of solvent effects on confined electrolytes
[AD-A262292] p 2996 N93-28245
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309
SOMMERFELD APPROXIMATION
An efficient method for analyzing microstrip antennas with a dielectric cover using a spectral domain moment method
[EUT-91-E-255] p 3026 N93-27228
SONIC BOOMS
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
SONOLUMINESCENCE
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
SOUND FIELDS
Simulation of boundary-layer transition: Receptivity to spike stage
[NASA-CR-191413] p 3040 N93-27588
SOUND GENERATORS
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
SOUND PROPAGATION
Research summary
[NASA-CR-193082] p 3129 N93-27127
Collective dynamics in dense fluid mixtures
p 3041 N93-28069
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
SOUND WAVES
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Roughness-induced generation of crossflow vortices in three-dimensional boundary layers
[NASA-CR-4505] p 2929 N93-27096
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342
Collective dynamics in dense fluid mixtures
p 3041 N93-28069
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
SOURCE PROGRAMS
Regenerable biocide delivery unit, volume 2
[NASA-CR-185701-VOL-2] p 3082 N93-27360
Origin tracking
[CWI-CS-R9230] p 3100 N93-27994
SOUTH KOREA
Mugunghwa: The first Korean domestic satellite for FSS and DBS services p 3023 N93-26651
SOUTHERN OSCILLATION
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
SOUTHERN SKY
Cordoba Durchmusterung, volume 1
[NASA-RP-1299-VOL-1] p 3170 N93-27116
Cordoba Durchmusterung, volume 2
[NASA-RP-1299-VOL-2] p 3170 N93-27117
Cordoba Durchmusterung, volume 3
[NASA-RP-1299-VOL-3] p 3170 N93-27118
Cordoba Durchmusterung, volume 4
[NASA-RP-1299-VOL-4] p 3170 N93-27119
SOYUZ SPACECRAFT
SOYUZ escape trajectory analysis from Space Station Freedom
[NASA-CR-4508] p 2954 N93-27609
SPACE BASES
Options for a lunar base surface architecture
p 3214 N93-27974
The use of automation and robotic systems to establish and maintain lunar base operations
p 3111 N93-27982
SPACE COLONIES
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Considerations for lunar colony communications systems p 3030 N93-27983
SPACE COMMERCIALIZATION
Energy for lunar resource exploitation
p 3212 N93-27961
SPACE COMMUNICATION
The 1992 United Nations Workshop on Space Communication for Development: Proceedings
p 3022 N93-26640
Satellite communications service: Leased or owned transponders on domestic, regional, or global satellite systems? p 3024 N93-26654
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Considerations for lunar colony communications systems p 3030 N93-27983
SPACE COOLING (BUILDINGS)
The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049
SPACE DEBRIS
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
Approaches to dealing with meteoroid and orbital debris protection on the Space Station p 2971 N93-27838
Debris observation and arresting experiment satellite
p 2949 N93-28023
Conceptual study of debris observation and arresting experiment satellite p 2950 N93-28024
SPACE ENVIRONMENT SIMULATION
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201
SPACE ERECTABLE STRUCTURES
Automated assembly of large space structures
p 2971 N93-27842
A preliminary structural analysis of space-based inflatable tubular frame structures p 3086 N93-27849
SPACE EXPLORATION
Mars exploration program p 2976 N93-26909
Nuclear electric propulsion systems overview
p 2955 N93-26970
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
Scoping calculations of power sources for NEP
p 2982 N93-26973
NEP processing, operations, and disposal
p 2982 N93-26975
The 20 kWe NEP flight system p 2983 N93-26983
Innovative electric propulsion thruster modeling
p 2984 N93-26989
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290
The challenges and benefits of lunar exploration
p 3211 N93-27957
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Intelligent robots for planetary exploration and construction p 3054 N93-27980
AI in space: Past, present, and possible futures
p 3111 N93-27988
Mars exploration mission p 2953 N93-28045
ROSETTA: The ESA sample return mission
p 2953 N93-28049
SPACE HABITATS
Proceedings of the Lunar Materials Technology Symposium
[NASA-CR-192881] p 3211 N93-27956
Engineering design constraints of the lunar surface environment p 3022 N93-27975
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977
The use of automation and robotic systems to establish and maintain lunar base operations
p 3111 N93-27982
Conceptual study on manned lunar surface site
p 2950 N93-28029
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover
p 2951 N93-28032
Lunar surface experiment system
p 2951 N93-28034
SPACE HEATING (BUILDINGS)
The role of gas heat pumps in electric DSM
[DE93-007858] p 3038 N93-27049
SPACE INDUSTRIALIZATION
Energy for lunar resource exploitation
p 3212 N93-27961
Future space activities: How can a baby having grown up too much in a cradle be dealt with?
p 2948 N93-28015
SPACE INFRARED TELESCOPE FACILITY
Development of far infrared detection techniques
[NASA-CR-193153] p 3141 N93-27225
A broadband THz receiver for low background space applications p 3020 N93-27782
SPACE LOGISTICS
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Space Station fluid management logistics
p 2967 N93-27799
An engineer/constructor's view of lunar resource development p 3211 N93-27960
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964
SPACE MANUFACTURING
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687
An integrated database with system optimization and design features p 3168 N93-26697
Energy for lunar resource exploitation
p 3212 N93-27961
SPACE MISSIONS
Mars exploration program p 2976 N93-26909
Solar System Exploration Division: Requirements for space nuclear propulsion p 2976 N93-26910
Nuclear electric propulsion systems overview
p 2955 N93-26970
The 20 kWe NEP system studies
p 2982 N93-26971
Conceptual definition of a 50-100 kWe NEP system for planetary science missions p 2982 N93-26972
Scoping calculations of power sources for NEP
p 2982 N93-26973
European space programme p 2920 N93-27174
NASA Discovery Program Workshop
[NASA-TM-108233] p 2948 N93-27290
Options for a lunar base surface architecture
p 3214 N93-27974
SPACE OBSERVATIONS (FROM EARTH)
Near-Earth asteroids: Observer alert network and physical observations p 3168 N93-26699
Debris observation and arresting experiment satellite
p 2949 N93-28023
Conceptual study of debris observation and arresting experiment satellite p 2950 N93-28024
SPACE PLASMAS
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
Modelling of plasmaspheric flows
p 3150 N93-28412
SPACE PLATFORMS
Combined space environment on spacecraft engineering materials
[NASA-CR-192536] p 2996 N93-28407
SPACE POWER REACTORS
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
The 20 kWe NEP system studies
p 2982 N93-26971
The 100-500 kWe NEP systems p 2983 N93-26984
Nuclear electric propulsion options for piloted Mars missions p 2984 N93-26985

An evolution strategy for lunar nuclear surface power p 2988 N93-27963
Electrical power integration for lunar operations p 2988 N93-27966
Radionuclide inventories for short run-time space nuclear reactor systems [DE93-004040] p 3138 N93-28058

SPACE PROBES
ROSETTA: The ESA sample return mission p 2953 N93-28049

SPACE PROCESSING
Melt-processing of lunar ceramics p 3007 N93-26685
Development of a material processing plant for lunar soil p 3021 N93-26694
In-situ materials processing systems and bioregenerative life support systems interrelationships p 2992 N93-26695
A multi-zone muffle furnace design [NASA-TM-106153] p 3009 N93-27011
Rapid Thermal Processing (RTP) of semiconductors in space [NASA-CR-193110] p 3009 N93-28408

SPACE PROGRAMS
Nuclear systems in space? Does/will the public accept them? p 2977 N93-26917
Aeronautics and space report of the President: Fiscal year 1992 activities p 3219 N93-27041
Future space activities: How can a baby having grown up too much in a cradle be dealt with? p 2948 N93-28015

SPACE RENDEZVOUS
Vertical landing on an asteroid p 2924 N93-27202
ROSETTA: The ESA sample return mission p 2953 N93-28049

SPACE SHUTTLE ASCENT STAGE
Investigation of separation in a strap-on Space Shuttle system [AD-A262372] p 2956 N93-27693

SPACE SHUTTLE BOOSTERS
Chronology of KSC and KSC related events for 1992 [NASA-TM-107561] p 3219 N93-27285
Investigation of separation in a strap-on Space Shuttle system [AD-A262372] p 2956 N93-27693

SPACE SHUTTLE MAIN ENGINE
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system [NASA-TM-106118] p 2955 N93-27018
Study of hydraulic actuation system for Space Shuttle main engine propellant valves [NASA-CR-193136] p 3050 N93-27112
Design verification test matrix development for the STME thrust chamber assembly [NASA-TM-108406] p 2986 N93-27251

SPACE SHUTTLE MISSIONS
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722

SPACE SHUTTLE ORBITERS
Investigation of separation in a strap-on Space Shuttle system [AD-A262372] p 2956 N93-27693

SPACE SHUTTLE PAYLOADS
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Electrical design of Space Shuttle payload G-534: The pool boiling experiment [NASA-TM-106143] p 2959 N93-27260

SPACE SHUTTLES
Battery selection for Space Shuttle experiments [NASA-TM-106142] p 2958 N93-27038
Chronology of KSC and KSC related events for 1992 [NASA-TM-107561] p 3219 N93-27285
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual [NASA-CR-192557] p 2957 N93-27592

SPACE STATION FREEDOM
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings [NASA-TM-106146] p 2957 N93-27019
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program [NASA-TM-106006] p 3055 N93-27025
Solar array electrical performance assessment for Space Station Freedom [NASA-TM-106161] p 2984 N93-27039
Regenerable biocide delivery unit, volume 1 [NASA-CR-185701] p 3081 N93-27122
Basic statistical analyses of candidate nickel-hydrogen cells for the Space Station Freedom [NASA-TM-106111] p 3123 N93-27124
Integrated Station Executive requirements and systems design approach [NASA-CR-185708] p 2958 N93-27143
Experiment/facility requirements document for the Space Station Furnace Facility. Section 1: Integrated configuration [NASA-CR-192533] p 2958 N93-27147
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation [NASA-TM-106128] p 2989 N93-27266
Advisory Committee on the Redesign of the Space Station [NASA-TM-108760] p 2963 N93-27579
SOYUZ escape trajectory analysis from Space Station Freedom [NASA-CR-4508] p 2954 N93-27609
Technology for Space Station Evolution. Volume 2: Data Management System/Environmental Control and Life Support Systems [NASA-TM-108725] p 2963 N93-27704
Technology for Space Station evolution: The data management system p 2963 N93-27705
Space Station Freedom Software Support Environment p 2964 N93-27706
Validated fault tolerant architectures for Space Station p 2964 N93-27707
A fault-tolerant RISC microprocessor for spacecraft applications p 2964 N93-27708
High rate science data handling p 2964 N93-27709
Electronic neural networks p 2964 N93-27711
Space Station displays and controls technology evolution p 2964 N93-27712
Onboard system health assessment p 2965 N93-27716
Environmental control and life support system evolution p 2965 N93-27719
Technologies for ECLSS evolution p 2965 N93-27720
Alternative processes for water reclamation and solid waste processing in a physical/chemical bioregenerative life support system p 2965 N93-27721
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724
JSC ECLSS R/T program overview p 2966 N93-27725

Approaches to dealing with meteoroid and orbital debris protection on the Space Station p 2971 N93-27838
Advanced automation of a prototypic thermal control system for Space Station p 2972 N93-27846
SPE water electrolyzers in support of the lunar outpost p 3088 N93-27977

SPACE STORAGE
Conceptual study of propellant storage and transfer engineering test satellite p 2950 N93-28025

SPACE TRANSPORTATION
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

SPACE TRANSPORTATION SYSTEM
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Advanced transportation system studies. Alternate propulsion subsystem concepts: Propulsion database
[NASA-CR-192545] p 2987 N93-28325

SPACE TRANSPORTATION SYSTEM FLIGHTS
Ultraviolet Imaging Telescope (UIT) observations of galaxies p 3184 N93-26785
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Debris/ice/TPS assessment and integrated photographic analysis for Shuttle Mission STS-56
[NASA-TM-107560] p 2956 N93-27538
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841

SPACE-TIME FUNCTIONS
Quasar redshifts and non-potential interactions
[SSCL-PREPRINT-758] p 3205 N93-28143

SPACEBORNE ASTRONOMY
White paper on science operations p 3165 N93-27047
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726

SPACEBORNE EXPERIMENTS
A multi-zone muffle furnace design
[NASA-TM-106153] p 3009 N93-27011
Battery selection for Space Shuttle experiments
[NASA-TM-106142] p 2958 N93-27038
Electrical design of Space Shuttle payload G-534: The pool boiling experiment
[NASA-TM-106143] p 2959 N93-27260
Superfluid helium needs and resupply on Space Station p 2968 N93-27802
Midcourse Space Experiment (MSX) environmental assessment
[AD-A262460] p 3127 N93-27830
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841
Controlled Structures Technology Steering Committee Workshop
[NASA-CR-192992] p 3058 N93-27888
The Middeck Active Control Experiment (MACE) p 3059 N93-27896
The Middeck Active Control Experiment (MACE): Identification for robust control p 3059 N93-27898
Conceptual study on manned engineering test satellites p 2949 N93-28017
Artificial gravity experiment satellites p 2949 N93-28018
Lunar surface experiment system p 2951 N93-28034
The Middeck Active Control Experiment (MACE) p 3061 N93-28173
LDEF: 69 Months in Space. Part 3: Second Post-Retrieval Symposium
[NASA-CP-3194-PT-3] p 3219 N93-28254
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Selected results for LDEF thermal control coatings p 3008 N93-28279

SPACEBORNE LASERS
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964

SPACEBORNE TELESCOPES
Shuttle PRCS plume contamination analysis for Astro-2 mission
[NASA-CR-193101] p 2986 N93-27240
A magnetic isolation and pointing system for the astrometric telescope facility p 2960 N93-27563

SPACECRAFT CHARGING
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 1
[AD-A262783] p 2974 N93-28401
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 2
[AD-A262784] p 2974 N93-28402

SPACECRAFT COMMUNICATION
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073
Communications and tracking technology discipline p 2972 N93-27856
Data management system technology discipline p 2972 N93-27857

SPACECRAFT COMPONENTS
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Conceptual study on manned engineering test satellites p 2949 N93-28017
Linearly connected solar power satellite p 2949 N93-28019
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Mars revolving observation satellite p 2953 N93-28047

SPACECRAFT CONFIGURATIONS
Conceptual study of fly-back booster p 2950 N93-28028
Lunar surface roving explorer p 2952 N93-28041
ROSETTA: The ESA sample return mission p 2953 N93-28049

SPACECRAFT CONSTRUCTION MATERIALS
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686
Technology for Space Station Evolution. Volume 5: Structures and Materials/Thermal Control System
[NASA-TM-108726] p 2970 N93-27835
Structures and materials technology discipline p 2973 N93-27865
LDEF materials overview p 2997 N93-28255
Combined space environment on spacecraft engineering materials
[NASA-CR-192536] p 2996 N93-28407

SPACECRAFT CONTAMINATION
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Shuttle PRCS plume contamination analysis for Astro-2 mission
[NASA-CR-193101] p 2986 N93-27240
Effects of spacecraft materials outgassing products on cryogenic surfaces
[AD-A262671] p 2963 N93-27686
LDEF materials overview p 2997 N93-28255
An XPS study of space-exposed polyimide film p 3007 N93-28267
Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268
Surface characterization of selected LDEF tray clamps p 3001 N93-28271
Contamination on LDEF: Sources, distribution, and history p 2998 N93-28272
Contamination measurements on experiment M0003 p 2998 N93-28273
Optical characterization of LDEF contaminant film p 3149 N93-28274

SPACECRAFT CONTROL
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
Minimum effort interception of multiple targets p 2925 N93-27205
Advanced actuators for the control of large space structures p 2962 N93-27572
Attitude control and stabilization technology discipline p 2972 N93-27855
The Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-27893
MODE: Structural Test Article (STA) p 3059 N93-27894
Lunar surface roving explorer p 2952 N93-28042
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248

SPACECRAFT DESIGN
Lunar NTR vehicle design and operations study p 2978 N93-26922
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
The 20 kWe NEP system studies p 2982 N93-26971
An analytical optimization of electric propulsion orbit transfer vehicles
[NASA-CR-191129] p 2985 N93-27060
Cryogenic transfer module for geosynchronous orbit p 2920 N93-27176
Advisory Committee on the Redesign of the Space Station
[NASA-TM-108760] p 2963 N93-27579
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Technology for Space Station Evolution. Volume 2: Data Management System/Environmental Control and Life Support Systems
[NASA-TM-108725] p 2963 N93-27704
Technology for Space Station Evolution. Volume 3: EVA/Manned Systems/Fluid Management System
[NASA-TM-108726] p 2966 N93-27786
Technology for Space Station Evolution. Volume 5: Structures and Materials/Thermal Control System
[NASA-TM-108728] p 2970 N93-27835
Structures for Space Station Freedom: Overview of current concept p 2970 N93-27836
PROBE (Precision Reflector Orbital Build Experiment): A proposed flight experiment to study EVA assembly of precision segmented reflectors p 2971 N93-27841
Interferometer testbed: Overview and hardware summary p 3058 N93-27889
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Conceptual study of fly-back booster p 2950 N93-28026
Fly-back booster p 2950 N93-28027
Conceptual study of fly-back booster p 2950 N93-28028
Conceptual study of manned lunar transportation system p 2951 N93-28030
Manned lunar surface site: Conceptual study on pressurized lunar surface operation rover p 2951 N93-28032
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Conceptual study of lunar landing modules p 2952 N93-28043
Outline of Mars explorer system p 2953 N93-28048
ROSETTA: The ESA sample return mission p 2953 N93-28049

SPACECRAFT DOCKING
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
Communications and tracking technology discipline p 2972 N93-27856

SPACECRAFT ENVIRONMENTS
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201
SPACECRAFT EQUIPMENT
Magnetic bearings: Fifty years of progress p 2959 N93-27556
Magnetic bearing turbomachinery case histories and applications for space related equipment p 2959 N93-27557
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Manned engineering test satellites p 2948 N93-28016
Conceptual study on manned engineering test satellites p 2949 N93-28017
Linearly connected solar power satellite p 2949 N93-28019
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022
Lunar surface experiment system p 2951 N93-28034
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038
Conceptual study of lunar roving explorer p 2952 N93-28040
Lunar surface roving explorer p 2952 N93-28041
Lunar surface roving explorer p 2952 N93-28042
Mars revolving observation satellite p 2953 N93-28047
SPACECRAFT GUIDANCE
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
SPACECRAFT INSTRUMENTS
Future Space Activity Workshop: Lunar Base Workshop 1992
[JTN-93-80420] p 2948 N93-28014
Manned engineering test satellites p 2948 N93-28016
Conceptual study on manned engineering test satellites p 2949 N93-28017
Linearly connected solar power satellite p 2949 N93-28019
Study of satellite microminiaturization technology p 2949 N93-28020
Study of satellite microminiaturization technology p 2949 N93-28021
Study of miniature and microminiature satellite technology p 2949 N93-28022
Lunar surface experiment system p 2951 N93-28034
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
Moon revolving observation satellites p 2952 N93-28037
Moon revolving observation satellite p 2952 N93-28038
Conceptual study of lunar roving explorer p 2952 N93-28040
SPACECRAFT LANDING
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
SPACECRAFT LAUNCHING
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
The design and evolution of the beta two-stage-to-orbit horizontal takeoff and landing launch system
[NASA-TM-106118] p 2955 N93-27018
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
SPACECRAFT MAINTENANCE
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
The resupply interface mechanism p 2968 N93-27800
The mobile servicing system p 2970 N93-27821
Welding/brazing for Space Station repair p 2971 N93-27840
SPACECRAFT MANEUVERS
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016
SPACECRAFT MODULES
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794
Manned engineering test satellites p 2948 N93-28016
Space Station Furnace Facility. Volume 2: Summary of technical reports
[NASA-CR-192534] p 2973 N93-28323
SPACECRAFT MOTION
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
SPACECRAFT ORBITS
Detail design of Mars transfer orbit p 2953 N93-28046
SPACECRAFT PERFORMANCE
Conceptual study of fly-back booster p 2950 N93-28026
SPACECRAFT POWER SUPPLIES
A photovoltaic catenary-tent array for the Martian surface
[NASA-CR-191144] p 2976 N93-26703
NEP power subsystem modeling p 2982 N93-26974
NEP systems model p 2984 N93-26986
Systems analysis on laser beamed power
[NASA-CR-193206] p 3047 N93-27036
Enhanced plasma current collection from weakly conducting solar array blankets
[NASA-TM-106168] p 2958 N93-27081
Basic statistical analyses of candidate nickel-hydrogen cells for the Space Station Freedom
[NASA-TM-106111] p 3123 N93-27124
Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198
Low Earth orbital atomic oxygen environmental simulation facility for space materials evaluation
[NASA-TM-106128] p 2989 N93-27266
Evolution of Space Station EMU PLSS technology recommendations p 2966 N93-27790
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814
Conceptual study of the moon revolving observation satellites p 2952 N93-28036
SPACECRAFT PROPULSION
Nuclear Propulsion Technical Interchange Meeting, volume 1
[NASA-CP-10116-VOL-1] p 2976 N93-26908
DOD requirements for space nuclear thermal propulsion p 2976 N93-26911
Focused technology: Nuclear propulsion p 2976 N93-26912
Overview of DOE space nuclear propulsion programs p 2977 N93-26913
Space Nuclear Thermal Propulsion (SNTP) program p 2977 N93-26914
Systems overview p 2977 N93-26915
Requirements management and control p 2977 N93-26916
Rover/NERVA-derived near-term nuclear propulsion p 2977 N93-26918
Advanced propulsion engine assessment based on a cermet reactor p 2977 N93-26919
Babcock and Wilcox assessment of the Pratt and Whitney XNR2000 p 2977 N93-26920
Lunar NTR vehicle design and operations study p 2978 N93-26922
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Overview of NASA/DOE/DOD interagency modeling team and activities p 2980 N93-26952
SAFSIM overview p 2981 N93-26959

Next generation system modeling of NTR systems p 2981 N93-26961
Rocket engine numerical simulator p 2981 N93-26962
Facilities p 2954 N93-26963
Plum Brook facilities p 2954 N93-26964
Space nuclear thermal propulsion: Evaluation of PIPET at the INEL's CTF p 2955 N93-26967
Space Nuclear Thermal Propulsion (SNTP) Air Force facility p 2955 N93-26968
Nuclear electric propulsion systems overview p 2955 N93-26970
NEP processing, operations, and disposal p 2982 N93-26975
NEP technology: FY 1992 milestones (NASA LeRC) p 2983 N93-26977
Power management and distribution technology p 2983 N93-26978
Radiator technology p 2983 N93-26979
The 20 kWe NEP flight system p 2983 N93-26983
NEP systems model p 2984 N93-26986
GPS system simulation methodology p 2984 N93-26990
Institute for Computational Mechanics in Propulsion (ICOMP)
[NASA-TM-106155] p 3111 N93-27061
Collection of papers of the 31st Israel Annual Conference on Aviation and Astronautics
[ITN-93-85187] p 2919 N93-27166
Vertical landing on an asteroid p 2924 N93-27202
Propulsion needs for lunar/Mars missions p 2967 N93-27798
The resupply interface mechanism p 2968 N93-27800
Orbital storage and supply of subcritical liquid nitrogen p 2968 N93-27801
Earth to space power beaming: A new NASA technology initiative p 2988 N93-27964
SPACECRAFT RADIATORS
The 100-500 kWe NEP systems p 2983 N93-26984
Conceptual study on manned engineering test satellites p 2949 N93-28017
SPACECRAFT RELIABILITY
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Study of hydraulic actuation system for Space Shuttle main engine propellant valves
[NASA-CR-193136] p 3050 N93-27112
SPACECRAFT SHIELDING
Method for retarding oxidation of an organic substrate
[NASA-CASE-LEW-15306-2] p 3006 N93-28425
SPACECRAFT STABILITY
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
Attitude stabilization of bias momentum satellites p 2923 N93-27195
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite p 2925 N93-27203
SPACECRAFT STRUCTURES
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Advanced actuators for the control of large space structures p 2962 N93-27572
Technology for Space Station Evolution. Volume 5: Structures and Materials/Thermal Control System
[NASA-TM-108728] p 2970 N93-27835
Controlled Structures Technology Steering Committee Workshop
[NASA-CR-192992] p 3058 N93-27888
Interferometer testbed: Overview and hardware summary p 3058 N93-27889
Finite element model and identification procedure p 3058 N93-27890
A stochastic approach to robust broadband structural control p 3058 N93-27892
The Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-27893
The Middeck Active Control Experiment (MACE) p 3059 N93-27896
The middeck active control experiment: Gravity and suspension effects p 3010 N93-27897
The Middeck Active Control Experiment (MACE): Identification for robust control p 3059 N93-27898
Strain actuated aeroelastic control p 3059 N93-27899
Manned engineering test satellites p 2948 N93-28016
Study of satellite microminiaturization technology p 2949 N93-28021
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167
Optical interferometer testbed p 3060 N93-28168
The application of controlled structures technology to adaptive optics p 3060 N93-28170
Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-28171
Inhibiting multiple mode vibration in controlled flexible systems p 3061 N93-28172
The Middeck Active Control Experiment (MACE) p 3061 N93-28173
Robust control for uncertain structures p 3061 N93-28174
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248

Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269
SPACECRAFT TRACKING
Communications and tracking technology discipline p 2972 N93-27856
SPACECRAFT TRAJECTORIES
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual [NASA-CR-192557] p 2957 N93-27592
SOYUZ escape trajectory analysis from Space Station Freedom [NASA-CR-4508] p 2954 N93-27609
MASTRE trajectory code update to automate flight trajectory design, performance predictions, and vehicle sizing for support of shuttle and shuttle derived vehicles: Programmers manual [NASA-CR-192558] p 2954 N93-28321
SPACECREWS
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
Nuclear electric propulsion operational reliability and crew safety study: NEP systems/modeling report p 2983 N93-26976
Engineering design constraints of the lunar surface environment p 3022 N93-27975
SPACELAB
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
Electrical design of Space Shuttle payload G-534: The pool boiling experiment [NASA-TM-106143] p 2959 N93-27260
SPALLATION
The search for cold dark matter using germanium detectors p 3205 N93-28250
SPARK GAPS
High-voltage pulse generator capable of 200 J at 5 kV [AD-A262111] p 3031 N93-27673
SPATIAL DISTRIBUTION
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
Emission line galaxies in a narrow strip toward Perseus p 3201 N93-26877
Fractional brownian motion, wavelets, and infrared detector noise [AD-A262956] p 3129 N93-28290
SPATIAL RESOLUTION
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Results on Monte-Carlo simulations of a microstrip gas counter [NIKHEF-H/92-10] p 3040 N93-27541
SPECIFIC IMPULSE
Computational fluid dynamics for nuclear thermal propulsion p 2979 N93-26930
An analytical optimization of electric propulsion orbit transfer vehicles [NASA-CR-191129] p 2985 N93-27060
SPECIFICATIONS
Description of an adder board [TR-92-09] p 3027 N93-27904
Specification of adaptive aiding systems [AD-A263071] p 3087 N93-27927
Specification and generation of a lambda-calculus environment [CWI-CS-R9233] p 3101 N93-27997
SPECKLE HOLOGRAPHY
Self-Referenced Speckle Holography (SRSH) image reconstruction performance [AD-A262487] p 3045 N93-27661
SPECTRAL BANDS
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar [NASA-CR-193160] p 3047 N93-27249
SPECTRAL CORRELATION
Intensity correlation of ionizing background at high redshifts p 3181 N93-26768
SPECTRAL EMISSION
The Amsterdam Pulse Stretcher AmPS as a photon source p 3139 N93-28338
SPECTRAL LINE WIDTH
Intensity correlation of ionizing background at high redshifts p 3181 N93-26768
SPECTRAL METHODS
Multidimensional spectral load balancing [DE93-008362] p 3106 N93-26669
Pseudospectral simulation of compressible turbulence using logarithmic variables [NASA-TM-107707] p 3040 N93-27586
SPECTRAL REFLECTANCE
Composition of near-Earth asteroids p 3205 N93-26690
Spectral infrared hemispherical reflectance measurements for LDEF tray clamps p 3149 N93-28270
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions [NASA-CR-193158] p 3064 N93-28417
SPECTRAL RESOLUTION
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
SPECTRAL SIGNATURES
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
SPECTROMETERS
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
SPECTROPHOTOMETRY
The nature of faint emission-line galaxies p 3173 N93-26716
Multi-filter spectrophotometry simulations p 3201 N93-26881
SPECTROSCOPIC ANALYSIS
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics [PB93-173011] p 3069 N93-27423
Non-traditional ion beam analyses [DE93-007590] p 3134 N93-28008
Development of germanium-silicon growth technology [AD-A262891] p 3154 N93-28304
SPECTROSCOPY
Velocity resolved spectroscopy of molecular hydrogen emission in NGC6240 p 3187 N93-26801
Coherent systems in the terahertz frequency range: Elements, operation, and examples p 3011 N93-27727
Non-traditional ion beam analyses [DE93-007590] p 3134 N93-28008
X ray and gamma ray spectroscopy of solids under pressure [DE93-010966] p 2996 N93-28360
SPECTRUM ANALYSIS
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
13 C NMR spectra of allosteric effectors of hemoglobin [AD-A262979] p 3084 N93-28293
SPEECH
DARPA TIMIT acoustic-phonetic continous speech corpus CD-ROM. NIST speech disc 1-1.1 [PB93-173938] p 3026 N93-27403
SPEECH RECOGNITION
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794
SPENT FUELS
Status and integration of the gas generation studies performed for the hydrogen safety program [DE93-008518] p 2994 N93-27105
SPHERES
Collective dynamics in dense fluid mixtures p 3041 N93-28069
SPHEROIDS
The multicomponent structure of bulges p 3187 N93-26800
SPIN
Spinning-current method for offset reduction in silicon Hall plates [ISBN-90-6275-780-4/CIP] p 3152 N93-27873
SPIN DECOUPLING
Zeeman spin splitting frequency renormalization in disordered interacting electronic systems [SSCL-PREPRINT-755] p 3157 N93-28315
SPIN DYNAMICS
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields [NIKHEF-H/92-1] p 3155 N93-27306
SPIN GLASS
Number of saddle points of the energy surface in SK spin-glass [SSCL-PREPRINT-726] p 3134 N93-28099
SPIN-SPIN COUPLING
Phase separation and superconductivity in the Kondo-like spin-hole coupled model [SSCL-PREPRINT-759] p 3153 N93-28144
SPINAL CORD
Secondary injury factors and preventative treatment [PB93-176014] p 3084 N93-27409
SPIRAL ANTENNAS
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779
SPIRAL GALAXIES
Heavy element abundances and massive star formation p 3172 N93-26709
What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
Environmental influences on galaxy evolution p 3175 N93-26727
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
Feeding IC 342: The nuclear spiral of a starburst galaxy p 3184 N93-26782
A radio continuum survey of edge-on spiral galaxies at 90 cm p 3185 N93-26790
Molecular gas temperature and density in spiral galaxies p 3185 N93-26792
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
The 158 micron (CII) mapping of galaxies: Probing the atomic medium p 3186 N93-26796
Far-infrared line images of dwarf galaxies p 3186 N93-26797
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
Molecular gas content of galaxies in the Hydra-Centaurus supercluster p 3188 N93-26807
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811
Density wave triggered star formation in grand design spirals p 3190 N93-26820
Tidal interactions and the formation of Magellanic spiral galaxies p 3190 N93-26821
Cluster tidal fields: Effects on disk galaxies p 3191 N93-26824
High chemical abundances in stripped Virgo spiral galaxies p 3191 N93-26825
Declining rotation curves in interacting galaxies p 3192 N93-26829
The formation of low-ionization emission in the halo of NGC 891 p 3198 N93-26864
The disk-halo interface in edge-on spirals p 3198 N93-26865
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867
Can cluster environment modify the dynamical evolution of spiral galaxies? p 3201 N93-26880
Ly alpha and IR galaxy companions of high redshift damped Ly alpha QSO absorbers p 3201 N93-26882
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889
H1 in RSA galaxies p 3203 N93-26891
Powering the superwind in NGC 253 p 3203 N93-26893
SPLINE FUNCTIONS
Closed G(sup 1)-continuous cubic Bezier surfaces [CWI-CS-R9226] p 3095 N93-27390
Survey of continuities of curves and surfaces [CWI-CS-R9202] p 3097 N93-27495
An algorithm for determining the approximation orders of multivariate periodic spline spaces [MEMO-1061] p 3101 N93-28012
SPOKES
Spokes in ring galaxies p 3202 N93-26885
SPONTANEOUS EMISSION
Energy transfer studies in interhalogen molecules [AD-A262888] p 3137 N93-28375
SPRAY CHARACTERISTICS
Simulation of preburner sprays, volumes 1 and 2 [NASA-CR-193031] p 2994 N93-27223
SPRAY NOZZLES
Simulation of preburner sprays, volumes 1 and 2 [NASA-CR-193031] p 2994 N93-27223
SPRAYERS
Velocity and drop size measurements in a swirl-stabilized, combusting spray [NASA-TM-106130] p 2944 N93-27130
SPREAD SPECTRUM TRANSMISSION
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals [AD-A263019] p 3027 N93-27910
An improved Kalman filter excisor for suppressing narrowband Gaussian noise interference [AD-A263020] p 3031 N93-27911
Multipath noise reduction spread spectrum signals [NASA-CASE-NPO-18970-1-CU] p 3028 N93-28126
SPUTTERING
Deposition and properties of novel nitride superlattice coatings [DE93-011532] p 3005 N93-28219

SQUARE WAVES
Practical input optimization for aircraft parameter estimation experiments
[NASA-CR-191462] p 2946 N93-27264
SQUARE WELLS
Phase of the quantum harmonic oscillator with applications to optical polarization p 3142 N93-27322
SQUEEZED STATES (QUANTUM THEORY)
Which Q-analogue of the squeezed oscillator? p 3142 N93-27320
Distribution of photons in squeezed polymode light p 3143 N93-27325
Two photon annihilation operators and squeezed vacuum p 3143 N93-27326
Squeezed states of damped oscillator chain p 3143 N93-27329
The uncertainty principle in resonant gravitational wave antennae and quantum non-demolition measurement schemes p 3143 N93-27330
Decoherence of multimode thermal squeezed coherent states p 3145 N93-27344
The harmonic oscillator and nuclear physics p 3146 N93-27354
Squeezing phenomena in interacting electron-phonon systems
[SSCL-PREPRINT-727] p 3134 N93-28100
SR-71 AIRCRAFT
The development of aircraft in the Lockheed Skunk Works from 1954 to 1991 p 2919 N93-27168
STABILITY
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
The set of super-stable marriages forms a distributive lattice
[MEMO-1052] p 3125 N93-27907
Linear stability analysis in the numerical solution of initial value problems
[TW-92-07] p 3118 N93-27916
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
STABILITY TESTS
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
The onset of vortex turbulence p 2938 N93-28251
STABILIZATION
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite p 2925 N93-27203
Correction and simplification to the order of a stabilizing regulator is sufficient a priori information for adaptive stabilization
[MEMO-1070] p 3110 N93-28155
Towards the formal design of self-stabilizing distributed algorithms
[RUU-CS-92-25] p 3102 N93-28165
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
STABILIZED PLATFORMS
Enhanced orbital gyrocompassing by the optical flow sensed by an Earth-pointing camera p 2923 N93-27194
STAINLESS STEELS
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
STANDARDS
Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379
STAR CLUSTERS
A search for quasar protoclusters at z greater than 4 p 3174 N93-26721
Results on the evolution of galaxies and their environment from the Ultraviolet Imaging Telescope on Astro-1 p 3174 N93-26723
IRAS studies of galactic supershells p 3183 N93-26776
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
STAR DISTRIBUTION
Two protogalaxy candidates in one night p 3173 N93-26717
Searching for Lyman alpha emission from a possible Zel'dovich pancake p 3179 N93-26755
Star-dust geometries in galaxies: The effect of interstellar matter distributions on optical and infrared properties of late-type galaxies p 3185 N93-26788
STAR FORMATION
The Evolution of Galaxies and Their Environment
[NASA-CP-3190] p 3171 N93-26706
Heavy element abundances and massive star formation p 3172 N93-26709
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
Globular cluster formation in merging galaxies? p 3175 N93-26729
Distant radio galaxies in the near IR p 3177 N93-26742
Massive low surface brightness galaxies p 3178 N93-26746
Oxygen abundances in low surface-brightness galaxies p 3178 N93-26747
H II regions in the dwarf galaxy UGC-A 86 p 3178 N93-26749
IRAS studies of galactic supershells p 3183 N93-26776
Starburst ages in HII galaxies p 3183 N93-26777
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
Starbursts triggered by central overpressure in interacting galaxies p 3183 N93-26781
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
OB associations and giant molecular clouds in the galaxy p 3185 N93-26787
The environments of Seyfert and Markarian galaxies p 3185 N93-26789
CO deficiency in galaxies of the Fornax cluster? p 3185 N93-26791
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
Ages, chemistry, and type 1A supernovae: Clues to the formation of the galactic stellar halo p 3187 N93-26803
Galactic oscillations p 3188 N93-26808
Is a local bar a good place to find a companion? The near infrared morphology of Maffei 2 p 3188 N93-26811
The morphology of and locations of star formation in impact induced ring galaxies p 3189 N93-26816
The critical density for star formation in HII galaxies p 3189 N93-26817
Density wave triggered star formation in grand design spirals p 3190 N93-26820
Models of the Cartwheel ring galaxy: Spokes and starbursts p 3190 N93-26823
Radio jets in colliding galaxies: Testing the interaction-activity connection p 3191 N93-26828
On the nature of star formation in cooling flow ellipticals p 3193 N93-26838
Star formation in cooling flow galaxies p 3193 N93-26839
Jet induced star formation in centrally dominant galaxies? p 3193 N93-26840
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Nuclear activity and the environments of nearby radio galaxies p 3196 N93-26852
Long slit spectroscopy of NGC 5506 p 3198 N93-26861
The ring around SN1987A p 3199 N93-26868
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds p 3201 N93-26878
Automata network models of galaxy evolution p 3201 N93-26879
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883
Gas in merging galaxies p 3202 N93-26886
Evolution of molecular clouds p 3203 N93-26892
Powering the superwind in NGC 253 p 3203 N93-26893
A (12)CO J = 2-1 map of the disk of Centaurus A: Evidence for large scale heating in the dust lane p 3204 N93-26894
The galactic center stellar population in the near infrared p 3204 N93-28080
STAR FORMATION RATE
Two searches for primeval galaxies p 3172 N93-26714
Low surface brightness galaxies and tidally triggered star formation p 3178 N93-26745
H II regions in the dwarf galaxy UGC-A 86 p 3178 N93-26749
Low surface brightness galaxies p 3178 N93-26750
Luminosities of H alpha emitting regions in a pair of interacting galaxies in the Bootes void p 3188 N93-26812
The critical density for star formation in HII galaxies p 3189 N93-26817
Density wave triggered star formation in grand design spirals p 3190 N93-26820
Deep H alpha images of interacting galaxies p 3191 N93-26826
Long slit spectroscopy of NGC 5506 p 3198 N93-26861
Automata network models of galaxy evolution p 3201 N93-26879
STARBURST GALAXIES
Heavy element abundances and massive star formation p 3172 N93-26709
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
Correlation between low level fluctuations in the x ray background and faint galaxies p 3179 N93-26752
Starburst ages in HII galaxies p 3183 N93-26777
Starburst models of merging galaxies p 3183 N93-26778
The effect of massive stars on the ionized medium of extragalactic HII regions p 3183 N93-26779
Feeding IC 342: The nuclear spiral of a starburst galaxy p 3184 N93-26782
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
The Lyman alpha emission of starburst galaxies p 3184 N93-26784
Deep H alpha images of interacting galaxies p 3191 N93-26826
Optical and near infrared photometry of Butcher-Oemler clusters p 3195 N93-26847
Long slit spectroscopy of NGC 5506 p 3198 N93-26861
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds p 3201 N93-26878
The ISM in the M82 starburst p 3202 N93-26887
STARK EFFECT
Nuclear isomers as ultra-high-energy-density materials
[DE93-009076] p 3135 N93-28158
STARS
Cordoba Durchmusterung, volume 1
[NASA-RP-1299-VOL-1] p 3170 N93-27116
Cordoba Durchmusterung, volume 2
[NASA-RP-1299-VOL-2] p 3170 N93-27117
Cordoba Durchmusterung, volume 3
[NASA-RP-1299-VOL-3] p 3170 N93-27118
Cordoba Durchmusterung, volume 4
[NASA-RP-1299-VOL-4] p 3170 N93-27119
STATIC LOADS
Multidimensional spectral load balancing
[DE93-008362] p 3106 N93-26669
STATIC PRESSURE
Analysis of fluctuating static pressure measurements in a large high Reynolds number transonic cryogenic wind tunnel
[NASA-TM-108722] p 2947 N93-27142
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189
STATISTICAL ANALYSIS
Statistical inference procedures for probability selection functions in long-term monitoring programs
[PB93-163012] p 3123 N93-26631
Annual review of aircraft accident data: US general aviation calendar year 1989
[PB93-160687] p 2940 N93-27033
Statistical modeling of software reliability
[NASA-CR-192986] p 3092 N93-27087
On the number of maxima in a discrete sample
[MEMO-COSOR-92-16] p 3112 N93-27235
Loudness and annoyance response to simulated outdoor and indoor sonic booms
[NASA-TM-107756] p 3130 N93-27271
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
Brorfelde Geomagnetic Observatory: Magnetic results, 1990
[DMI-92-1] p 3073 N93-27833
Godhavn (Greenland) Geophysical Observatory: Magnetic results, 1985-1990
[DMI-92-2] p 3073 N93-27834
Age 60 Project: Consolidated database experiments
[HS-TR-8025-3C(R2)] p 3087 N93-27851
Statistical techniques for signal processing
[AD-A262731] p 3126 N93-28400
STATISTICAL CORRELATION
Omega from the anisotropy of the redshift correlation function p 3172 N93-26711
Ways to improve your correlation functions p 3172 N93-26712

What determines the morphological fractions in clusters of galaxies? p 3175 N93-26726
The spatial correlation properties of dark galaxy halos in a CDM universe p 3176 N93-26735
Analysis of the Einstein sample of early-type galaxies p 3179 N93-26754
The two-point correlation function of randomly distributed Lyman alpha clouds p 3181 N93-26767
A study of electron transfer using a three-level system coupled to an ohmic bath p 3145 N93-27346

STATISTICAL DECISION THEORY
Theory of signal detection and its application to visual target acquisition: A review of the literature [AD-A262920] p 3085 N93-28307

STATISTICAL DISTRIBUTIONS
Subset selection: Robustness and imprecise selection [MEMO-COSOR-92-10] p 3124 N93-27279
The set of super-stable marriages forms a distributive lattice [MEMO-1052] p 3125 N93-27907

STATISTICAL MECHANICS
Quantum harmonic oscillator in a thermal bath p 3145 N93-27345
Orbit-orbit branching rules p 3146 N93-27350
Correlation functions and relaxation properties in chaotic, dynamic and statistical mechanics [SSCL-PREPRINT-725] p 3126 N93-28098

STATISTICAL TESTS
Experiments: Design, parametric and nonparametric analysis, and selection [MEMO-COSOR-92-15] p 3123 N93-27234

STATISTICAL WEATHER FORECASTING
Including maximum sustained wind speed in a time series model to forecast hurricane movement [AD-A262510] p 3078 N93-27663

STEADY FLOW
On the instability of the flow in an oscillating tank of fluid [NASA-CR-191424] p 3037 N93-26896
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results [NASA-TM-106150] p 3038 N93-27020
Stability investigations of airfoil flow by global analysis p 2932 N93-27436
Steady incompressible flow around objects in general coordinates with a multigrid solution method [REPT-92-48] p 3041 N93-27884

STEADY STATE
Parallel solution of high-order numerical schemes for solving incompressible flows [NASA-TM-4451] p 3106 N93-27040

STEAM
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems [PB93-173490] p 3002 N93-26638

STEAM FLOW
Evaluation of ceramic tubes, joints, and seals for high pressure heat exchange systems [PB93-173490] p 3002 N93-26638

STEEL STRUCTURES
Fracture mechanics analysis of NGV fuel cylinders. Part 1: Steel cylinders [PB93-165835] p 3057 N93-27417

STEELS
Nucleation and growth of rolling contact failure of 440C bearing steel [NASA-CR-193138] p 3001 N93-28410
Development and evaluation of a cleanable high efficiency steel filter [DE93-008024] p 3070 N93-28419

STEERABLE ANTENNAS
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731

STELLAR COLOR
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
The nature of faint emission-line galaxies p 3173 N93-26716
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Low redshift star-forming galaxies: What can they teach us about primeval galaxies? p 3200 N93-26875

STELLAR ENVELOPES
The origin and evolution of dust in interstellar and circumstellar environments [NASA-CR-193025] p 3204 N93-27287

STELLAR EVOLUTION
Heavy element abundances and massive star formation p 3172 N93-26709
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
Distant radio galaxies in the near IR p 3177 N93-26742
The ring around SN1987A p 3199 N93-26868
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884

STELLAR LUMINOSITY
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
The nature of faint emission-line galaxies p 3173 N93-26716
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
Globular cluster formation in merging galaxies? p 3175 N93-26729
Clustering of very luminous infrared galaxies and their environment p 3175 N93-26731
H II regions in the dwarf galaxy UGC-A 86 p 3178 N93-26749
Analysis of the Einstein sample of early-type galaxies p 3179 N93-26754
The evolution of the intergalactic medium and the origin of the galaxy luminosity function p 3180 N93-26759
Starburst models of merging galaxies p 3183 N93-26778
The galactic center stellar population in the near infrared p 3204 N93-28080

STELLAR MAGNITUDE
Cordoba Durchmusterung, volume 1 [NASA-RP-1299-VOL-1] p 3170 N93-27116
Cordoba Durchmusterung, volume 2 [NASA-RP-1299-VOL-2] p 3170 N93-27117
Cordoba Durchmusterung, volume 3 [NASA-RP-1299-VOL-3] p 3170 N93-27118
Cordoba Durchmusterung, volume 4 [NASA-RP-1299-VOL-4] p 3170 N93-27119
Bonner Durchmusterung, volume 1 [NASA-RP-1297-VOL-1] p 3170 N93-27382
Bonner Durchmusterung, volume 2 [NASA-RP-1297-VOL-2] p 3170 N93-27383

STELLAR MASS
Heavy element abundances and massive star formation p 3172 N93-26709
Cluster evolution as a probe of primordial density fluctuations p 3175 N93-26730
HI observations of dwarf galaxies out to a distance of 50 Mpc p 3186 N93-26794
Atomic hydrogen in the disturbed edge-on galaxy NGC 4631 p 3189 N93-26815
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
The ring around SN1987A p 3199 N93-26868
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884
Gas in merging galaxies p 3202 N93-26886
The ISM in the M82 starburst p 3202 N93-26887

STELLAR MASS ACCRETION
A comparative examination of LMC X-4 and Her X-1 x ray double star systems [MPE-232] p 3205 N93-28202

STELLAR MODELS
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution p 3173 N93-26715
The Lyman alpha forest of the high-z quasar 0000-263 p 3203 N93-26890

STELLAR SPECTRA
Survey incompleteness and the evolution of the QSO luminosity function p 3172 N93-26710
The nature of faint emission-line galaxies p 3173 N93-26716
Two protogalaxy candidates in one night p 3173 N93-26717
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
Everything you ever wanted to know about the ultraviolet spectra of star-forming galaxies but were afraid to ask p 3173 N93-26719
The ultraviolet signature of massive stars in starburst galaxies p 3174 N93-26720
A search for quasar protoclusters at z greater than 4 p 3174 N93-26721
Globular cluster formation in merging galaxies? p 3175 N93-26729
Near-IR imaging of moderate redshift galaxy clusters p 3177 N93-26741
Distant radio galaxies in the near IR p 3177 N93-26742
Extremely red objects in the fields of high redshift radio galaxies p 3177 N93-26743
Probing the optical depth of spiral galaxies using multi-waveband observations p 3202 N93-26884

STELLAR SPECTROPHOTOMETRY
Multi-filter spectrophotometry of quasar environments p 3196 N93-26850

STELLAR WINDS
Far-infrared line images of dwarf galaxies p 3186 N93-26797
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
Numerical modeling of the interstellar medium in galactic disks p 3199 N93-26866
The ring around SN1987A p 3199 N93-26868
A systematic investigation of edge-on starburst galaxies: Evidence for supernova-driven superwinds p 3201 N93-26878

STIFFNESS MATRIX
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites [NASA-CR-191142] p 2990 N93-27086

STIMULATION
Mechanical stimulation of skeletal muscle increases prostaglandin F2(alpha) synthesis and cyclooxygenase activity by a pertussis toxin sensitive mechanism [NASA-CR-193041] p 3083 N93-27102

STIRLING CYCLE
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program [DE93-005743] p 3065 N93-28302

STOCHASTIC PROCESSES
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
Mixed H2/H infinity control in a stochastic framework [MEMO-COSOR-92-13] p 3109 N93-27232
On the asymptotic behavior of discrete events systems [ISBN-90-74488-01-3] p 3125 N93-27876
A stochastic approach to robust broadband structural control p 3058 N93-27892
Optimal server assignment in the case of service times with monotone failure rates [TW-92-04] p 3125 N93-27906
Influence of stochastic contact resistance on coupling losses [MEMO-1067] p 3028 N93-28076
Incidence and lattice calculus with applications to stochastic geometry and image analysis [CWI-BS-R9213] p 3126 N93-28089
A boson field stochastic calculus and quantum filtering in Fock space [SSCL-PREPRINT-723] p 3156 N93-28096
Large deviations theory and stochastic gauge fixing [SSCL-PREPRINT-739] p 3126 N93-28193
The Gribov problem in the frame of stochastic quantization [SSCL-PREPRINT-740] p 3157 N93-28194
A modified Faddeev-Popov formula and the Gribov ambiguity [SSCL-PREPRINT-750] p 3157 N93-28209

STOKES LAW
Hyperasymptotics and the Stokes' phenomenon [CWI-AM-R9206] p 3120 N93-28085

STORAGE BATTERIES
Basic statistical analyses of candidate nickel-hydrogen cells for the Space Station Freedom [NASA-TM-106111] p 3123 N93-27124

STORAGE TANKS
Survey of fiber-optic sensor for remote sensing in radiologically and chemically harsh environments [DE93-004998] p 3062 N93-26624
Status and integration of the gas generation studies performed for the hydrogen safety program [DE93-008518] p 2994 N93-27105
Comparing the results of an analytical model of the no-vent fill process with no-vent fill test results for a 4.96 cubic meters (175 cubic feet) tank [NASA-TM-106018] p 3039 N93-27155
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219 [PB93-173441] p 2999 N93-27530
Stress analysis and evaluation of a rectangular pressure vessel [DE93-004990] p 3060 N93-28059

STORMS (METEOROLOGY)
Multiparameter radar and aircraft based studies of the micro-physical, kinematic and electrical structure of convective clouds [AD-A262673] p 3078 N93-28115
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena [AD-A262676] p 3078 N93-28116

STRAIN DISTRIBUTION
Composite laminated bend analysis and experiments p 2921 N93-27181

STRAIN MEASUREMENT
Near threshold fatigue testing
[DE93-009069] p 3061 N93-28432
STRAIN RATE
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262
STRANGE ATTRACTORS
Mixed spectra and rotational symmetry
[W-9212] p 3121 N93-28139
STRAPDOWN INERTIAL GUIDANCE
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207
STRATOCUMULUS CLOUDS
A maritime and continental aerosol-cloud interaction study from ASTEX 1992
[AD-A262088] p 3079 N93-28192
STRATOSPHERE
Study of emissions and control of stratospheric ozone-depleting compounds in California
[PB93-160752] p 3069 N93-27519
STREAMS
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
STRESS (PHYSIOLOGY)
ELF electric and magnetic fields: Pacific Northwest Laboratory studies
[DE93-008255] p 3029 N93-28420
STRESS ANALYSIS
Contact stress analysis of spiral bevel gears using nonlinear finite element static analysis
[NASA-TM-106176] p 3049 N93-27037
Composite laminated bend analysis and experiments p 2921 N93-27181
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
Application of magnetomechanical hysteresis modeling of magnetic techniques for monitoring neutron embrittlement and biaxial stress
[DE93-009760] p 3000 N93-28234
STRESS CONCENTRATION
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Fracture micromechanics of ceramic composites p 2920 N93-27172
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872
STRESS CORROSION CRACKING
Stress corrosion evaluation of HP 9Ni-4Co-0.20C steel
[NASA-TP-3384] p 3000 N93-28071
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253
STRESS DISTRIBUTION
Composite laminated bend analysis and experiments p 2921 N93-27181
STRESS FUNCTIONS
Explicit robust schemes for implementation of general principal value-based constitutive models
[NASA-TM-106123] p 3089 N93-26947
STRESS INTENSITY FACTORS
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363
STRESS RELIEVING
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253
STRESS TENSORS
Variational methods in general relativity: Mitteleuropean mathematical inaccuracy and Italian rigour. The contribution of A. Palatini
[SSCL-PREPRINT-760] p 3156 N93-28145
STRESS-STRAIN RELATIONSHIPS
Stability of single layer composite cylinders subjected to lateral pressure: Numerical approach p 2922 N93-27184
The fatigue behaviour of T- and X-joints made of square hollow sections
[ETN-93-93598] p 3058 N93-27872
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
Sub-nanosecond optical diagnostics of laser-material interaction and dynamic microstructure of materials
[DE93-008702] p 3049 N93-28369
STRING THEORY
Complex geometry and string theory
[SSCL-PREPRINT-746] p 3157 N93-28197
STRIP TRANSMISSION LINES
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224
STRONTIUM OXIDES
Selective methane oxidation over promoted oxide catalysts
[DE93-009768] p 2993 N93-26941
STRUCTURAL ANALYSIS
Probabilistic structural analysis for nuclear thermal propulsion p 2979 N93-26931
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Face-gear drives: Design, analysis, and testing for helicopter transmission applications
[NASA-TM-106101] p 3050 N93-27133
Softening of concrete loading in compression
[ISBN-9-03-860062-3] p 3056 N93-27371
Testing a wheeled landing gear system for the TH-57 helicopter
[AD-A262152] p 2942 N93-27547
Advanced buckling analyses of beams with arbitrary cross sections
[ISBN-9-9002808-0] p 3059 N93-27944
Automatization of structural analysis calculation procedure: NASTRAN pre and post processors
[ETN-93-93706] p 3100 N93-27947
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
Computer-assisted determination of minimum energy conformations. 7: A pharmacophore model of the active region of the alpha2-adrenoceptor
[AD-A262108] p 3135 N93-28181
High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362
LUTE primary mirror study
[NASA-CR-193069] p 3148 N93-28448
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451
STRUCTURAL BASINS
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422
STRUCTURAL DESIGN
Structural tailoring of aircraft engine blade subject to ice impact constraints
[NASA-TM-106033] p 3055 N93-26999
Compressive and shear buckling analysis of metal matrix composite sandwich panels under different thermal environments
[NASA-TM-4492] p 3056 N93-27263
Mechanics in material space
[AD-A262448] p 3057 N93-27698
Structures for Space Station Freedom: Overview of current concept p 2970 N93-27836
Structural technology challenges for evolutionary growth of Space Station Freedom p 2970 N93-27837
Finite element model and identification procedure p 3058 N93-27890
Mechanical design philosophy and construction of the Amsterdam Pulse Stretcher ring AmPS p 3139 N93-28339
STRUCTURAL DESIGN CRITERIA
The 80 kV electrostatic wire septum for AmPS p 3139 N93-28340
STRUCTURAL ENGINEERING
Controlled Structures Technology Steering Committee Workshop
[NASA-CR-192992] p 3058 N93-27888
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167
The application of controlled structures technology to adaptive optics p 3060 N93-28170
Intelligent structures technology p 3061 N93-28176
STRUCTURAL FAILURE
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
STRUCTURAL PROPERTIES (GEOLOGY)
Information extraction and integration in mineral exploration p 3167 N93-28072
STRUCTURAL RELIABILITY
Probabilistic sizing of laminates with uncertainties
[NASA-TM-106145] p 2990 N93-27082
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force p 2926 N93-27210
STRUCTURAL STABILITY
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
STRUCTURAL VIBRATION
Inclusion of transverse shear deformation in the exact buckling and vibration analysis of composite plate assemblies
[NASA-CR-4510] p 3056 N93-27075
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167
STRUCTURED PROGRAMMING
Verification of parameterised synchronous concurrent algorithms with OBJ3: The pixel planes architecture revisited
[CWI-CS-R9225] p 3095 N93-27378
A predicate transformer for unification
[CWI-CS-R9227] p 3096 N93-27391
STUDENTS
Digest of education statistics, 1992
[PB93-169522] p 3161 N93-27420
SUBMERGED BODIES
A study of the higher order Lamb resonances on elastic shells: Their prediction and interpretation
[AD-A262237] p 3130 N93-27933
SUBMILLIMETER WAVES
Primeval galaxies in the sub-mm and mm p 3172 N93-26713
Observations of the CO J=6-5 transition in starburst galaxies p 3184 N93-26783
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
A 380 GHz SIS receiver using Nb/AlO(x)/Nb junctions for a radioastronomical balloon-borne experiment: PRONAOS p 3013 N93-27742
Slot antenna SIS mixers for submillimeter wavelengths p 3014 N93-27745
A fixed tuned broadband matching structure for submillimeter SIS receivers p 3014 N93-27747
Slot-line end-fire antennas for THz frequencies p 3015 N93-27751
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
Zone plate lens antennas for millimeter and submillimeter wavelengths p 3016 N93-27757
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758
Sub micron area Nb/AlO(x)/Nb tunnel junctions for submillimeter mixer applications p 3016 N93-27761
Fabrication and characterization of high current-density, submicron, NbN/MgO/NbN tunnel junctions p 3017 N93-27763
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Submillimeter wave detection with superconducting tunnel diodes p 3018 N93-27769
Evaluation of integrated tuning elements with SIS devices p 3018 N93-27770
Source conductance scaling for high frequency superconducting quasiparticle receivers p 3018 N93-27771
Resonant tunneling diodes as sources for millimeter and submillimeter wavelengths p 3018 N93-27772
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774
Planar GaAs diodes for THz frequency mixing applications p 3019 N93-27776
New approach to the design of Schottky barrier diodes for THz mixers p 3019 N93-27778
Measurements of the single sideband suppression for a 650 GHz heterodyne receiver p 3020 N93-27780
InGaAs/InP heteroepitaxial Schottky barrier diodes for terahertz applications p 3020 N93-27781

A broadband THz receiver for low background space applications p 3020 N93-27782
AlGaAs/GaAs quasi-bulk effect mixers: Analysis and experiments p 3020 N93-27783
All-solid-state radiometers for environmental studies to 700 GHz p 3020 N93-27784
A 492 GHz cooled Schottky receiver for radio-astronomy p 3021 N93-27785

SUBROUTINES
Adaptive EAGLE dynamic solution adaptation and grid quality enhancement p 2937 N93-27464

SUBSONIC AIRCRAFT
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694

SUBSONIC FLOW
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610

SUBSONIC SPEED
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252
High-lift aerodynamics: Prospects and plans p 2933 N93-27442
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450

SUBSONIC WIND TUNNELS
Transition aerodynamics for 20-percent-scale VTOL unmanned aerial vehicle
[NASA-TM-4419] p 2928 N93-27032
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437

SUBSTRATES
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052
Investigation of misfit dislocation configurations in MBE-grown InGaAs layers on misaligned GaAs (001) substrates
[DE93-007578] p 3151 N93-27522
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy
[AD-A263031] p 3152 N93-27922
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437

SUCTION
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151

SUDDEN IONOSPHERIC DISTURBANCES
Solar-geophysical data number 582, February 1993. Part 1: (Prompt reports). Data for January 1993, December 1992 and late data
[PB93-174035] p 3218 N93-27513

SULFATES
A surface analytical investigation of the influence of sulphate reducing bacteria on metallic corrosion
[AD-A262357] p 2999 N93-27647

SULFONIC ACID
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292

SULFUR
Visible light emitting materials and injection devices
[AD-A263025] p 3152 N93-27913

SULFUR DIOXIDES
Technological options for acid rain control
[PB93-173094] p 3069 N93-27527

SULFUR FLUORIDES
ACE 1992 summary data report: Aircraft measurements of meteorological parameters and SF6
[PB93-174886] p 3077 N93-27407

SUMS
Description of an adder board
[TR-92-09] p 3027 N93-27904
Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083

SUPERCOMPUTERS
Information technologies for astrophysics circa 2001 p 3165 N93-27045
Strategic plan for scientific computing
[DE93-006875] p 3090 N93-27614

SUPERCONDUCTING DEVICES
Onset of dispersion in Nb microstrip transmission lines at submillimeter wave frequencies p 3016 N93-27758
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Electrical and infrared properties of thin niobium microbolometers near T(sub c) p 3020 N93-27779

SUPERCONDUCTING MAGNETS
Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
The role of superconductivity in magnetic bearings for high-load applications p 2962 N93-27576

SUPERCONDUCTING SUPER COLLIDER
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330
Experimental challenges at future hadron colliders (lectures for the 1992 Saint Croix Summer School)
[DE93-008613] p 3140 N93-28429

SUPERCONDUCTIVITY
Superconducting linear actuator p 2962 N93-27577
Phase separation and superconductivity in the U equals infinity limit of the extended multiband Hubbard model
[SSCL-PREPRINT-763] p 3151 N93-27580
Superconductivity, phase separation and charge transfer instability in the U = infinity limit of the three band model of the CuO2 planes
[SSCL-PREPRINT-749] p 3153 N93-28140
Superconductive fluctuations in the density of states and tunneling resistance in high T(sub c) superconductors
[SSCL-PREPRINT-756] p 3153 N93-28141
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
Condensed matter physics at surfaces and interfaces of solids
[DE93-005648] p 3154 N93-28346
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347

SUPERCONDUCTORS
Magnetic Suspension Technology Workshop
[NASA-CP-3202] p 2959 N93-27554
Magnetic bearings: Fifty years of progress p 2959 N93-27556
Performance of ceramic superconductors in magnetic bearings p 2963 N93-27578

SUPERGRAVITY
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

SUPERLATTICES
Strain-relaxed InGaAs buffer layers grown by molecular-beam epitaxy for 1.3 (mu)m Fabry-Perot optical modulators
[DE93-006774] p 3151 N93-26639
Superlattice barrier varactors p 3012 N93-27738
Deposition and properties of novel nitride superlattice coatings
[DE93-011532] p 3005 N93-28219

SUPERNOVA REMNANTS
Wide-field direct CCD observations supporting the Astro-1 Space Shuttle mission's Ultraviolet Imaging Telescope p 3174 N93-26722
Evidence for a multiphase, inhomogeneous interstellar medium in damped Ly alpha systems p 3180 N93-26760
An astrophysics data program investigation of spatial structure of supernova remnants
[NASA-CR-193104] p 3205 N93-28409

SUPERNOVA 1987A
The ring around SN1987A p 3199 N93-26868

SUPERNOVAE
Heavy element abundances and massive star formation p 3172 N93-26709
Evolution of luminous IRAS galaxies: Radio imaging p 3184 N93-26786
Ages, chemistry, and type 1A supernovae: Clues to the formation of the galactic stellar halo p 3187 N93-26803
High velocity clouds in nearby disk galaxies p 3187 N93-26804
Atomic hydrogen in the disturbed edge-on galaxy NGC 4631 p 3189 N93-26815
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095

SUPERPLASTICITY
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944

SUPERSONIC AIRCRAFT
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview p 2920 N93-27173
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694

SUPERSONIC COMBUSTION
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Experimental demonstration of a 120-mm ram accelerator p 2985 N93-27137
Navier-Stokes simulation of transient fluid dynamics and initiation of combustion in the ram accelerator p 2985 N93-27138
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226

SUPERSONIC COMBUSTION RAMJET ENGINES
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226

SUPERSONIC FLOW
Numerical models of jet disruption in cluster cooling flows p 3189 N93-26814
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Sensitivity calculations for a 2D, inviscid, supersonic forebody problem
[NASA-CR-191444] p 2928 N93-27004
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955

SUPERSONIC JET FLOW
Numerical simulations of bent, disrupted radio jets p 3188 N93-26813

SUPERSONIC SPEED
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method p 2935 N93-27455

SUPERSYMMETRY
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
Deformation of supersymmetric and conformal quantum mechanics through affine transformations p 3142 N93-27321
Remarks about massive and massless particles in supersymmetry p 3138 N93-27335
On harmonic oscillators and their Kemmer relativistic forms p 3144 N93-27336
Atomic supersymmetry p 3146 N93-27353
The Mathai-Quillen formalism and topological field theory
[NIKHEF-H/92-07] p 3155 N93-27496

SUPPLYING
Space Station fluid resupply p 2967 N93-27797
Space Station fluid management logistics p 2967 N93-27799

SUPPRESSORS
A fast Fourier transform approach to interference suppression in direct sequence spread spectrum signals
[AD-A263019] p 3027 N93-27910

SURFACE ACOUSTIC WAVE DEVICES
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153

SURFACE CRACKS
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363

SURFACE DEFECTS
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy
[AD-A263031] p 3152 N93-27922

Nucleation and growth of rolling contact failure of 440C bearing steel
[NASA-CR-193138] p 3001 N93-28410

SURFACE ENERGY
Sea ice-atmospheric interaction: Application of multispectral satellite data in polar surface energy flux estimates
[NASA-CR-193027] p 3073 N93-28137

SURFACE FINISHING
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

SURFACE GEOMETRY
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228

SURFACE IONIZATION
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000
Chemical analyses of provided samples
[NASA-CR-193211] p 2993 N93-27077

SURFACE NAVIGATION
Mobile robot navigation using qualitative reasoning
[DE93-008277] p 3109 N93-27104

SURFACE PROPERTIES
Filaments in the California current: Effects upon primary production
[AD-A263036] p 3080 N93-27924
Characterization of lunar surface materials for use in construction p 3211 N93-27959
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
Martensitic phase transitions with surface effects
[AD-A262886] p 3000 N93-28228
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions
[NASA-CR-193158] p 3064 N93-28417
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456

SURFACE REACTIONS
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Energy and chemical change
[AD-A262359] p 3133 N93-27648
Simulations of solvent effects on confined electrolytes
[AD-A262294] p 3133 N93-27677
Monte Carlo simulations of solvent effects on confined electrolytes
[AD-A262292] p 2996 N93-28245
An XPS study of space-exposed polyimide film p 3007 N93-28267
Surface characterization of selected LDEF tray clamps p 3001 N93-28271

SURFACE ROUGHNESS
Roughness-induced generation of crossflow vortices in three-dimensional boundary layers
[NASA-CR-4505] p 2929 N93-27096
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
Simulation of boundary-layer transition: Receptivity to spike stage
[NASA-CR-191413] p 3040 N93-27588
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007

SURFACE ROUGHNESS EFFECTS
Effect of fracture surface roughness on shear crack growth
[DE93-011047] p 3061 N93-28363

SURFACE TEMPERATURE
Newly found evidence of Sun-climate relationships
[NASA-TM-104583] p 3076 N93-27015
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5
[AD-A262117] p 3079 N93-28183

SURFACE VEHICLES
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636

SURFACTANTS
Transport of Zn(OH)4(-2) ions across a polyolefin microporous membrane
[AD-A262969] p 3136 N93-28292

SURVEILLANCE RADAR
Protection of taxiing traffic in airports through mode S secondary radar technology
[ETN-93-93455] p 2941 N93-28206

SURVEYS
Policy implications of the GRI baseline projection of US energy supply and demand to 2010, 1993
[PB93-165751] p 3064 N93-26634
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447

SUSPENSION SYSTEMS (VEHICLES)
The middeck active control experiment: Gravity and suspension effects p 3010 N93-27897
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928

SWEEP ANGLE
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450

SWELLING
The complex action of major solutes on radiation induced swelling of Fe-Cr-Ni austenitic alloys
[DE93-007994] p 3000 N93-28010

SWEPT WINGS
The experimental study of transition and leading edge contamination of swept wings
[LIB-TRANS-2197] p 2930 N93-27274
Three-dimensional compressible stability-transition calculations using the spatial theory p 2931 N93-27431
Recent progress in the analysis of iced airfoils and wings p 2933 N93-27441

SWIRLING
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154

SWITCHES
Long lifetime silicon photoconductive semiconductor switches
[DE93-006757] p 3032 N93-28150

SWITCHING
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327
Modal testing using a full instrumentation technique
[DE93-009635] p 3046 N93-28373
Information Switching Processor (ISP) contention analysis and control
[NASA-CR-191130] p 2957 N93-28416

SWITCHING CIRCUITS
A communications system for the United Nations Transitional Authority in Cambodia (UNTAC) p 3025 N93-26663
Monolithic millimeter-wave diode array beam controllers: Theory and experiment p 3011 N93-27731
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327
Information Switching Processor (ISP) contention analysis and control
[NASA-CR-191130] p 2957 N93-28416

SYMMETRY
Upper and lower bounds for the waiting time in the symmetric shortest queue system
[MEMO-COSOR-92-09] p 3127 N93-27278
Symmetries of coupled harmonic oscillators p 3142 N93-27318
Symmetries and motions in manifolds
[NIKHEF-H/92-08] p 3128 N93-27510
Mixed spectra and rotational symmetry
[W-9212] p 3121 N93-28139
Continuous symmetries of discrete equations
[SSCL-PREPRINT-738] p 3121 N93-28163

SYNCHRONISM
Verification of parameterised synchronous concurrent algorithms with OBJ3: The pixel planes architecture revisited
[CWI-CS-R9225] p 3095 N93-27378

SYNCHROTRON RADIATION
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311
Ultraviolet Free-Electron Laser (UV FEL) Facility at Brookhaven National Laboratory
[DE93-007274] p 3048 N93-28355

SYNCHROTRONS
A halo and a blow-out in NGC 253 p 3199 N93-26869
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311

SYNTAX
A comparison of OBJ3 and ASF+SDF
[CWI-CS-R9223] p 3094 N93-27363
An executable semantics for a subset of COLD
[CWI-CS-R9145] p 3097 N93-27493
Bisimulation semantics for concurrency with atomicity and action refinement
[CWI-CS-R9210] p 3116 N93-27498
Processes as terms: Non-well-founded models for bisimulation
[CWI-CS-R9211] p 3097 N93-27499
A simple specification language combining processes, time, and data
[CWI-CS-R9209] p 3097 N93-27525
The Grammar Workbench: A first step towards Lingware engineering
[TR-92-06] p 3100 N93-27902
Regular processes with relative time and silent steps
[CWI-CS-R9231] p 3101 N93-27995

SYNTHESIS (CHEMISTRY)
Probe molecule studies: Active species in alcohol synthesis
[DE93-009685] p 2993 N93-26616
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293

SYNTHETIC APERTURES
Characterization of lunar surface materials for use in construction p 3211 N93-27959

SYSTEM FAILURES
Process membership in asynchronous environments
[NASA-CR-192977] p 3091 N93-26904
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308

SYSTEM IDENTIFICATION
Parameter identification for nonlinear aerodynamic systems
[NASA-CR-193072] p 2930 N93-27282
Approximate identification and control design with application to a mechanical system
[ISBN-90-370-0065-7] p 3109 N93-27934

SYSTEMS ANALYSIS
Clustered engine study p 2978 N93-26925
NTP comparison process p 2978 N93-26926
Nuclear Engine System Simulation (NESS) version 2.0 p 2981 N93-26958
NEP systems model p 2984 N93-26986
NEP systems model p 2984 N93-26987
Thruster models for NEP system analysis p 2984 N93-26988
GPS system simulation methodology p 2984 N93-26990
Systems analysis on laser beamed power
[NASA-CR-193206] p 3047 N93-27036
1991 NASA Life Support Systems Analysis workshop
[NASA-CR-4466] p 3085 N93-27100
1992 NASA Life Support Systems Analysis workshop
[NASA-CR-4467] p 3085 N93-27101
Assessment of computational issues associated with analysis of high-lift systems p 2934 N93-27449
Efficient model-based diagnosis of dynamic systems with state
[MEMO-INF-92-53] p 3096 N93-27488
International survey of industrial applications of formal methods. Volume 1: Purpose, approach, analysis, and conclusions
[PB93-178556] p 3010 N93-27517
International survey of industrial applications of formal methods. Volume 2: Case studies
[PB93-178564] p 3010 N93-27518
On the asymptotic behavior of discrete events systems
[ISBN-90-74488-01-3] p 3125 N93-27876
Lunar base thermal management/power system analysis and design p 3089 N93-27985

SYSTEMS ENGINEERING
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
An integrated database with system optimization and design features p 3168 N93-26697
Requirements management and control p 2977 N93-26916
NTP comparison process p 2978 N93-26926
Computational modeling of nuclear thermal rockets p 2980 N93-26956
Integrated Station Executive requirements and systems design approach
[NASA-CR-185708] p 2958 N93-27143
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
Multidisciplinary design optimization: An emerging new engineering discipline
[NASA-TM-107761] p 2942 N93-27258
Robotics technology discipline p 2973 N93-27864
Specification of adaptive aiding systems
[AD-A263071] p 3087 N93-27927

SYSTEMS INTEGRATION
An integrated database with system optimization and design features p 3168 N93-26697
Engine management during NTRE start up p 2980 N93-26953
Radiator technology p 2983 N93-26979
Environmental control and life support system evolution p 2965 N93-27719

Fluid Management System (FMS) fluid systems overview p 2967 N93-27796
Integrated Power and Attitude Control System (IPACS) technology developments p 2969 N93-27814
Electrical power integration for lunar operations p 2988 N93-27966
Lunar materials processing system integration p 3021 N93-27972
Status of the Fiber Optic Control System Integration (FOCSI) program [NASA-TM-106151] p 3046 N93-28053

SYSTEMS MANAGEMENT
NEP power subsystem modeling p 2982 N93-26974
Integrated Station Executive requirements and systems design approach [NASA-CR-185708] p 2958 N93-27143
Onboard system health assessment p 2965 N93-27716
Fluid Management System (FMS) fluid systems overview p 2967 N93-27796

SYSTEMS SIMULATION
NEP systems model p 2984 N93-26986
Innovative electric propulsion thruster modeling p 2984 N93-26989
GPS system simulation methodology p 2984 N93-26990

T

T-38 AIRCRAFT
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data [AD-A262363] p 2942 N93-27692

TABLES (DATA)
TS software user manual for the Time Series program and utilities [PB93-167518] p 3091 N93-26635
Factorizations of a(sub n) +/- 1, 13 less than or equal to a less than 100 [CWI-NM-R9212] p 3114 N93-27366

TAKEOFF
Effect of underwing frost on transport aircraft takeoff performance [DOT/FAA/CT-TN93/9] p 2940 N93-27252
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443

TALC
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684

TANKS (COMBAT VEHICLES)
User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs [RTP/2180/01] p 3099 N93-27852

TANTALUM CARBIDES
Deposition and modification of tantalum carbide coatings on graphite by laser interactions [DE93-008055] p 3003 N93-27052

TARGET ACQUISITION
Ultra-wideband radar transient detection using time-frequency and wavelet transforms [AD-A262154] p 3026 N93-27549
Investigation of systematic effects in atmospheric microthermal probe data [AD-A262119] p 3074 N93-28185
Theory of signal detection and its application to visual target acquisition: A review of the literature [AD-A262920] p 3085 N93-28307

TARGET RECOGNITION
Theory of signal detection and its application to visual target acquisition: A review of the literature [AD-A262920] p 3085 N93-28307

TASK PLANNING (ROBOTICS)
Implicit point location in arrangements of line segments, with an application to motion planning [RUU-CS-92-15] p 3116 N93-27505
Agent-independent planning p 2970 N93-27822
FTS evolution p 2970 N93-27824

TASKS
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [MEMO-COSOR-92-32] p 3106 N93-27361
Complexity of scheduling multiprocessor tasks with prespecified processor allocations [CWI-BS-R9211] p 3108 N93-27990

TAXIING
Protection of taxiing traffic in airports through mode S secondary radar technology [ETN-93-93455] p 2941 N93-28206

TAXONOMY
A meta model for update in evolving information systems [TR-92-05] p 3167 N93-27887

TDR SATELLITES
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations [NASA-TM-106172] p 2956 N93-27064

TECHNOLOGICAL FORECASTING
Workshop proceedings: Information Systems for Space Astrophysics in the 21st Century, volume 1 [NASA-CR-192825] p 3165 N93-27042
Astrotech 21: A technology program for future astrophysics missions p 2953 N93-27043
Study of basic physical processes in liquid and solid rocket propulsion [NASA-CR-192550] p 2986 N93-27146

TECHNOLOGIES
Third Annual Women in Science and Technology Conference [DE93-005271] p 3164 N93-28297

TECHNOLOGY ASSESSMENT
The Advanced Communications Technology Satellite (ACTS): Five new technologies p 3022 N93-26643
Nuclear thermal propulsion technology overview p 2978 N93-26927
In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft [NASA-TM-103719] p 3129 N93-27058
1991 NASA Life Support Systems Analysis workshop [NASA-CR-4466] p 3085 N93-27100
1992 NASA Life Support Systems Analysis workshop [NASA-CR-4467] p 3085 N93-27101
Software for adult literacy: Scope, suitability, available sources for information, and implications for federal policy [PB93-163913] p 3161 N93-27416
High rate science data handling p 2964 N93-27709
The ECLSS advanced automation project evolution and technology assessment p 2966 N93-27723
Technology for Space Station Evolution. Volume 3: EVA/Manned Systems/Fluid Management System [NASA-TM-108726] p 2966 N93-27786
The challenges and benefits of lunar exploration p 3211 N93-27957
Options for a lunar base surface architecture p 3214 N93-27974
Assessment of the state of the art in life support environmental control for SEI p 3089 N93-27978
Future space activities: How can a baby having grown up too much in a cradle be dealt with? p 2948 N93-28015
Study of miniature and microminiature satellite technology p 2949 N93-28022

TECHNOLOGY TRANSFER
NASA SBIR product catalog, 1990 [NASA-TM-105103] p 3163 N93-27028
Magnetic Suspension Technology Workshop [NASA-CP-3202] p 2959 N93-27554

TECHNOLOGY UTILIZATION
Privatization of data communication services by domestic satellite in Thailand p 3025 N93-26664
Case study of technology use in adult literacy programs [PB93-163905] p 3161 N93-27415
Magnetic bearings for a high-performance optical disk buffer p 2961 N93-27569
Summer research program (1992). Graduate Student Research Program (GSRP) reports. Volume 8: Phillips Laboratory [AD-A261972] p 3163 N93-27642
A fault-tolerant RISC microprocessor for spacecraft applications p 2964 N93-27708
High efficiency low cost GaAs/Ge cell technology p 2968 N93-27809
Proceedings of the Lunar Materials Technology Symposium [NASA-CR-192881] p 3211 N93-27956
AI in space: Past, present, and possible futures p 3111 N93-27988
Long Duration Exposure Facility experiment M0003 deintegration observation data base p 3169 N93-28288

TECTONICS
Regional tectonic analysis of Venus equatorial highlands and comparison with Earth-based Magellan radar images [NASA-CR-192996] p 3210 N93-27164

TELECOMMUNICATION
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659
Digital telecommunications are a key development factor: Integration of satellite into overall telecommunication networks as a way to harmonize social and economic implications p 3025 N93-26660
Reliability analysis of complex models using sure bounds [NASA-CR-191445] p 3091 N93-26897

TELEMETRY
Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198

TELEOPERATORS
FTS evolution p 2970 N93-27824

TELEROBOTICS
EVA and telerobot interaction p 2967 N93-27792
Flight telerobotic servicer p 2970 N93-27820
Space teleoperations technology for Space Station evolution p 2970 N93-27823
FTS evolution p 2970 N93-27824

TELESCOPES
How to get unlimited observing time on a 4 metre telescope p 3171 N93-26707
Cosmology with liquid mirror telescopes p 3171 N93-26708
Bonner Durchmusterung, volume 1 [NASA-RP-1297-VOL-1] p 3170 N93-27382
Bonner Durchmusterung, volume 2 [NASA-RP-1297-VOL-2] p 3170 N93-27383
Characterization of lunar surface materials for use in construction p 3211 N93-27959

TELEVISION SYSTEMS
Digital audio and video broadcasting by satellite p 3023 N93-26645
Telecommunication service by leased transponders of the regional satellite p 3025 N93-26661

TELEVISION TRANSMISSION
Digital audio and video broadcasting by satellite p 3023 N93-26645

TEMPERATURE CONTROL
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings [NASA-TM-106146] p 2957 N93-27019
Design considerations for ultra-precision magnetic bearing supported slides p 2960 N93-27562
Environmental control and life support system p 2965 N93-27718
Electrical power system WP-04 p 2968 N93-27804
Technology for Space Station Evolution. Volume 5: Structures and Materials/Thermal Control System [NASA-TM-108728] p 2970 N93-27835
Thermal systems p 2971 N93-27843
Advanced interface heat exchangers for the Space Station main thermal bus p 2971 N93-27844
Space Station Freedom central thermal control system evolution p 2972 N93-27845
Advanced automation of a prototypic thermal control system for Space Station p 2972 N93-27846
Thermal control system technology discipline p 2973 N93-27866
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Wide range H2 sensor using catalytic alloys [DE93-007591] p 3046 N93-28009
Manned lunar surface site p 2951 N93-28033
Thermal management in gas cooled solid state laser disk amplifiers [DE93-009241] p 3048 N93-28230
The continuing materials analysis of the thermal control surfaces experiment (S0069) p 3007 N93-28276
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277

TEMPERATURE DEPENDENCE
Hot hydrogen testing of refractory metals and ceramics [NASA-CR-192560] p 2998 N93-27484
Tensile properties of epoxy encapsulants [DE93-008494] p 3005 N93-28207

TEMPERATURE DISTRIBUTION
The hot interstellar medium in NGC 1399 p 3179 N93-26753

TEMPERATURE EFFECTS
The role of gas heat pumps in electric DSM [DE93-007858] p 3038 N93-27049
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Rectenna thermal model development p 3022 N93-27986
Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model [DOT/FAA/CT-89/25] p 2941 N93-28055
Modeling the behavior of materials [DE93-010483] p 3060 N93-28161
Martensitic phase transitions with surface effects [AD-A262886] p 3000 N93-28228
Electronic structure theory of alloy phase stability [DE93-009547] p 3000 N93-28232
Contamination on LDEF: Sources, distribution, and history p 2998 N93-28272

TEMPERATURE GRADIENTS
A multi-zone muffle furnace design [NASA-TM-106153] p 3009 N93-27011

TEMPERATURE MEASUREMENT
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
Thermal control system technology discipline p 2973 N93-27866
Correction-free pyrometry in radiant wall furnaces
[NASA-CASE-NPO-18655-1-CU] p 3046 N93-28322
TEMPLATES
A local search template
[MEMO-COSOR-92-11] p 3092 N93-27230
New carbohydrate-based materials
[DE93-011116] p 3006 N93-28351
TEMPORAL DISTRIBUTION
Phase of the quantum harmonic oscillator with applications to optical polarization p 3142 N93-27322
TENNESSEE
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
TENSILE PROPERTIES
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
TENSILE STRENGTH
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207
TENSORS
Classical and quantum mechanics of a spinning particle interacting with anti-symmetric non-abelian tensor fields
[NIKHEF-H/92-1] p 3155 N93-27306
Commutative diagrams and tensor calculus in Riemann spaces
[SSCL-PREPRINT-741] p 3122 N93-28195
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368
TERCOM
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178
TERMINOLOGY
Machine aided indexing from natural language text
[NASA-CR-4512] p 3164 N93-26901
TERMS
Termination of term writing by interpretation
[RUU-CS-92-14] p 3114 N93-27381
TERNARY ALLOYS
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624
TERRAIN
Optimal configuration analysis for the Robotic All-Terrain Lunar Exploration Rover
[DE93-008340] p 3052 N93-28152
TERRAIN ANALYSIS
Information-based criteria of terrain navigability. Part 1: Data-base analysis p 2921 N93-27178
Digital parallel processor array for optimum path planning
[NASA-CASE-NPO-18727-1-CU] p 3108 N93-28427
TEST EQUIPMENT
An apparatus for gripping test specimens
[NASA-CASE-LEW-15345-2] p 3052 N93-28127
TEST FACILITIES
Development of a large-scale, outdoor, ground-based test capability for evaluating the effect of rain on airfoil lift
[NASA-TM-4420] p 2928 N93-26899
Nuclear Propulsion Technical Interchange Meeting, volume 2
[NASA-CP-10116-VOL-2] p 2980 N93-26951
Facilities p 2954 N93-26963
Plum Brook facilities p 2954 N93-26964
NEP facilities (LeRC) p 2954 N93-26965
Space nuclear thermal propulsion: Evaluation of PIPET at the INEL's CTF p 2955 N93-26967
Space Nuclear Thermal Propulsion (SNTP) Air Force facility p 2955 N93-26968
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
A laboratory study of subjective response to sonic booms measured at White Sands Missile Range
[NASA-TM-107746] p 3130 N93-27272
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189
Modal testing using a full instrumentation technique
[DE93-009635] p 3046 N93-28373
TEST FIRING
Gas generator igniter performance at extremely low temperatures p 2922 N93-27188
Qualitative model-based diagnostics for rocket systems
[NASA-TM-106234] p 2956 N93-28052
TEST STANDS
Fault-tolerant onboard digital information switching and routing for communications satellites
[NASA-TM-4471] p 2956 N93-26895
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
Interferometer testbed: Overview and hardware summary p 3058 N93-27889
Control design for the SERC experimental testbeds p 3058 N93-27891
Optical interferometer testbed p 3060 N93-28168
TETHERED SATELLITES
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
TETHERING
The dynamic phenomena of a tethered satellite: NASA's first Tethered Satellite Mission, TSS-1
[NASA-TP-3347] p 2959 N93-27162
TETHERLINES
TSS tether cable meteoroid/orbital debris damage analysis
[NASA-TM-108404] p 2957 N93-27023
TEXTS
GWB: Manual for the Grammar Work Bench, version 1.0
[TR-91-28] p 3100 N93-27885
THEOREM PROVING
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
Maximum imprecision related to intervals of measures and Bayesian inference with conjugate imprecise prior densities
[MEMO-COSOR-92-07] p 3124 N93-27276
Upper and lower bounds for the waiting time in the symmetric shortest queue system
[MEMO-COSOR-92-09] p 3127 N93-27278
Characteristic sets in commutative algebra: An overview
[MEMO-COSOR-92-24] p 3112 N93-27281
Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1043] p 3115 N93-27469
On Hamilton-connectedness of Cayley graphs p 3115 N93-27470
On Hamiltonian properties of 2-tough graphs p 3115 N93-27471
The Hopping Lemma p 3115 N93-27473
The complete closure of a graph p 3115 N93-27476
Two problems related to results of Chvatal-Erdos p 3116 N93-27478
Concerning the circumference of certain families of graphs p 3116 N93-27479
Ore-type conditions for cycles through specified vertices p 3116 N93-27480
Hamilton cycles in path-tough graphs p 3116 N93-27481
Cubic graphs containing k vertex-disjoint subgraphs of given cyclomatic number p 3116 N93-27482
Provably recursive programs
[CWI-CS-R9212] p 3097 N93-27500
On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540
On transfinite abstract reduction systems
[CWI-CS-R9205] p 3117 N93-27550
Incidence and lattice calculus with applications to stochastic geometry and image analysis
[CWI-BS-R9213] p 3126 N93-28089
Some limit theorems in log density
[W-9108] p 3126 N93-28120
Real theorem provers deserve real user-interfaces
[INRIA-RR-1684] p 3105 N93-28444
THEOREMS
On Hamilton-connectedness of Cayley graphs p 3115 N93-27470
The power of parallel projection
[RUU-CS-92-17] p 3100 N93-27908
Incidence and lattice calculus with applications to stochastic geometry and image analysis
[CWI-BS-R9213] p 3126 N93-28089
The commutant lifting theorem for contractions on Krein spaces
[W-9107] p 3128 N93-28119
Notes on Krein spaces
[W-9109] p 3128 N93-28121
The commutant lifting theorem in the Krein space setting: A proof based on the coupling method
[W-9208] p 3128 N93-28125
THEORETICAL PHYSICS
On the octonionic Nahm equations and self-dual membranes in 9 dimensions
[DE93-007974] p 3128 N93-26673
Covariant harmonic oscillators: 1973 revisited p 3147 N93-27358
Variational methods in general relativity: Mitteleuropean mathematical inaccuracy and Italian rigour. The contribution of A. Palatini
[SSCL-PREPRINT-760] p 3156 N93-28145
THERMAL ANALYSIS
Nuclear Engine System Simulation (NESS) version 2.0 p 2981 N93-26958
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Rectenna thermal model development p 3022 N93-27986
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451
THERMAL CONDUCTIVITY
Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458
THERMAL CONTROL COATINGS
Space environmental effects on LDEF composites: A leading edge coated graphite epoxy panel p 2992 N93-28265
LDEF thermal control coatings post-flight analysis p 3008 N93-28278
Selected results for LDEF thermal control coatings p 3008 N93-28279
Fluorescence measurements of the thermal control experiments coatings on LDEF S0069 and A0114 p 3008 N93-28280
Second LDEF Post-Retrieval Symposium interim results of experiment A0034 p 3008 N93-28283
THERMAL DECOMPOSITION
Thermal decomposition of energetic materials. 3: Temporal behaviors of the rates of formation of the gaseous pyrolysis products from condensed-phase decomposition of 1,3,5-trinitrohexahydro-s-triazine
[AD-A261965] p 3008 N93-27666
THERMAL DIFFUSION
Thermal analysis of transmissive elements in high average power laser beam delivery systems
[DE93-009235] p 3049 N93-28451
THERMAL DIFFUSIVITY
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349
THERMAL ENERGY
Regolith thermal energy storage for lunar nighttime power p 3067 N93-27984
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349
THERMAL ENVIRONMENTS
Rapid Thermal Processing (RTP) of semiconductors in space
[NASA-CR-193110] p 3009 N93-28408
THERMAL EXPANSION
Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269
THERMAL FATIGUE
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
THERMAL INSULATION
Lunar base thermal management/power system analysis and design p 3089 N93-27985
Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303
THERMAL NOISE
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342

THERMAL PLASMAS
Static galactic halo and galactic wind
p 3198 N93-26862
THERMAL PROTECTION
The effects of simulated low Earth orbit environments on spacecraft thermal control coatings
[NASA-TM-106146] p 2957 N93-27019
THERMAL REACTORS
Nuclear propulsion technology advanced fuels technology p 2979 N93-26935
THERMAL RESISTANCE
Rectenna thermal model development
p 3022 N93-27986
THERMAL SIMULATION
NTP system simulation and detailed nuclear engine modeling p 2980 N93-26957
Development of IR radiation simulator for spacecraft thermal testing p 2924 N93-27201
THERMAL STRESSES
Flow instability in particle-bed nuclear reactors
p 2979 N93-26934
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
THERMAL VACUUM TESTS
Outgassing and dimensional changes of polymer matrix composites in space p 2992 N93-28262
THERMIONIC EMISSION
Thermionic emission current in a single barrier varactor p 3012 N93-27735
THERMIONIC POWER GENERATION
An evolution strategy for lunar nuclear surface power
p 2988 N93-27963
THERMOCHEMISTRY
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684
Transient simulation of ram accelerator flowfields
p 2986 N93-27139
CSTL technical activities 1992
[PB93-173482] p 3219 N93-27399
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Oxygen production on the Lunar materials processing frontier p 3088 N93-27967
THERMOCOUPLES
Dynamic gas temperature measurements using a personal computer for data acquisition and reduction
[NASA-TM-106119] p 3091 N93-27024
THERMODYNAMIC CYCLES
Diffusion-absorption heat pump
[PB93-165777] p 3037 N93-26620
THERMODYNAMIC EFFICIENCY
By-passing of heat exchangers in gas turbines
p 2922 N93-27189
THERMODYNAMIC EQUILIBRIUM
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
Double simple-harmonic-oscillator formulation of the thermal equilibrium of a fluid interacting with a coherent source of phonons p 3145 N93-27342
THERMODYNAMIC PROPERTIES
Thermodynamic analysis of the binary systems Mo-V, Ni-V, Si-V, and Ti-V
[PB93-173185] p 3155 N93-26637
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
Structure and thermodynamics of the soft ion model electrolyte solutions
[AD-A262293] p 3136 N93-28246
THERMODYNAMICS
Thermodynamic analysis of the binary systems Mo-V, Ni-V, Si-V, and Ti-V
[PB93-173185] p 3155 N93-26637
Development of a pulse ramjet based on twin valveless pulse combustors coupled to operate in antiphase
p 2922 N93-27186
Decoherence of multimode thermal squeezed coherent states p 3145 N93-27344
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Structure and thermodynamics of the soft ion model electrolyte solutions
[AD-A262293] p 3136 N93-28246
Determining the surface heat flux distribution over the tropical Pacific Ocean by the adjoint method
p 3074 N93-28249
THERMOELASTICITY
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
THERMOELECTRIC COOLING
Thermoelectric cooler design
[AD-A262149] p 3010 N93-27545
THERMOELECTRIC GENERATORS
An evolution strategy for lunar nuclear surface power
p 2988 N93-27963
THERMOELECTRICITY
An evolution strategy for lunar nuclear surface power
p 2988 N93-27963
THERMOPHYSICAL PROPERTIES
NIST standard reference data products catalog, 1993
[PB93-173409] p 3219 N93-27424
Physical properties of fluorinated propane and butane derivatives as alternative refrigerants
[PB93-173102] p 3010 N93-27528
Composition dependence of fluid thermophysical properties: Theory and modeling
[DE93-011119] p 2996 N93-28352
THERMOPLASTIC RESINS
A new class of high strength molding resins, phase 1
[AD-A262691] p 3005 N93-28117
THERMOPLASTICITY
An analytical/numerical correlation study of the multiple concentric cylinder model for the thermoplastic response of metal matrix composites
[NASA-CR-191142] p 2990 N93-27086
The environmental and impact resistance of adhesively bonded thermoplastic fibre composites
[AD-A263202] p 2992 N93-28383
THERMOSPHERE
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
THESAURI
Knowledge-based machine indexing from natural language text: Knowledge base design, development, and maintenance
[NASA-CR-4523] p 3164 N93-26902
THICKNESS
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070
THIN FILMS
Magnetic thin films and nanostructures: Anisotropy, microstructure, and their inter-relationship
[DE93-007714] p 3002 N93-26611
Silicon-Film(tm) on ceramic solar cells
[DE93-009608] p 3065 N93-27108
Sol-gel preparation of ion-conducting ceramics for use in thin films
[DE93-007720] p 3003 N93-27616
Paramagnetic nitrogen defects in silicon nitride
[DE93-008341] p 3151 N93-27619
Innovative sputtering techniques for CIS and CdTe submodule fabrication
[DE93-000085] p 3065 N93-27626
Direct visualization of defect structures contained within self-assembled organomercaptan monolayers: Combined use of electrochemistry and scanning tunneling microscopy
[AD-A263031] p 3152 N93-27922
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009
Silazine to silica p 2997 N93-28257
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433
When are thin films of metals metallic?
[DE93-009718] p 3007 N93-28437
THIN WALLED SHELLS
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
THIN WINGS
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
Leading edge vortices in a chordwise periodic flow
p 2927 N93-27218
THIOUREAS
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293
THREE AXIS STABILIZATION
TechSAT attitude control p 2924 N93-27197
THREE DIMENSIONAL BOUNDARY LAYER
Roughness-induced generation of crossflow vortices in three-dimensional boundary layers
[NASA-CR-4505] p 2929 N93-27096
On the role of secondary instabilities in laminar-turbulent transition of 2D and 3D boundary layers
p 2931 N93-27430
Unsteady transition measurements on a pitching three-dimensional wing p 2934 N93-27450
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467
THREE DIMENSIONAL FLOW
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
Three-dimensional compressible stability-transition calculations using the spatial theory
p 2931 N93-27431
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455
THREE DIMENSIONAL MODELS
Numerical simulations of bent, disrupted radio jets
p 3188 N93-26813
A numerical simulation of galaxy subcluster mergers
p 3192 N93-26833
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method
p 2935 N93-27455
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
High strain Lagrangian hydrodynamics: A three dimensional SPH code for dynamic material response
[AD-A262798] p 3043 N93-28378
Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models
[AD-A263209] p 3075 N93-28384
THROATS
Erosion sensitivity of graphitic nozzles for solid-propellant rocket motors p 2926 N93-27215
THROTTLING
Low bandwidth robust controllers for flight
[NASA-CR-193085] p 2946 N93-27156
Knowledge-based reasoning in the Paladin tactical decision generation system
[NASA-CR-4507] p 2946 N93-27603
THRUST AUGMENTATION
Evaluation of low power augmented hydrazine thrusters p 2927 N93-27216
THRUST BEARINGS
Design and test of a magnetic thrust bearing
p 2961 N93-27567
Hybrid bearings for turbopumps and the like
[NASA-CASE-MFS-28491-1] p 3052 N93-28326
THRUST CHAMBERS
Design verification test matrix development for the STME thrust chamber assembly
[NASA-TM-108406] p 2986 N93-27251
THRUST CONTROL
Analysis of thrust modulation of ram-rockets by a vortex valve p 2922 N93-27187
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
THRUST LOADS
Design and test of a magnetic thrust bearing
p 2961 N93-27567
THRUST MEASUREMENT
Multiple degree-of-freedom force and moment measurement for static propulsion testing using magnetic suspension technology p 2955 N93-27566
THRUST PROGRAMMING
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
THRUST VECTOR CONTROL
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview
p 2920 N93-27173
THRUSTORS
Simplified Aid For Crew Rescue (SAFR)
p 2967 N93-27793
THYRATRONS
Pulsed electrostatic kickers with low beam impedance for AmPS p 3139 N93-28341
TIBET
Satellite communication services for Tibet autonomous region by domestic satellite in China
p 3023 N93-26650
TIBIA
Shape optimization of tibial prosthesis components
[NASA-CR-191123] p 3081 N93-27085
TIDES
The effect of tidal fields on the shapes and kinematics of dark halos p 3177 N93-26740
Tidal interactions and the formation of Magellanic spiral galaxies p 3190 N93-26821

Cluster tidal fields: Effects on disk galaxies
p 3191 N93-26824

TIME DEPENDENCE
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
Moving-finite-element solution of time-dependent partial differential equations in two space dimensions
[CWI-NM-R9206] p 3113 N93-27303
Analysis of local uniform grid refinement
[CWI-NM-R9211] p 3114 N93-27364

TIME OPTIMAL CONTROL
Minimizing total inventory cost on a single machine in just-in-time manufacturing
[MEMO-COSOR-92-20] p 3093 N93-27247

TIME SERIES ANALYSIS
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536
Identification of significant outliers in time series data
[AD-A262437] p 3125 N93-27659
Including maximum sustained wind speed in a time series model to forecast hurricane movement
[AD-A262510] p 3078 N93-27663
Validity of approximations for time periodic solutions of a forced non-linear hyperbolic differential equation
[REPT-92-47] p 3118 N93-27883
Fractional brownian motion, wavelets, and infrared detector noise
[AD-A262956] p 3129 N93-28290

TIME SHARING
Complexity of scheduling multiprocessor tasks with prespecified processor allocations
[CWI-BS-R9211] p 3108 N93-27990

TIME TEMPERATURE PARAMETER
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

TIMOSHENKO BEAMS
Passive damping augmentation of flexible beam-like lattice trusses for large space structures
p 2923 N93-27192

TIROS SATELLITES
Adjustment of TIROS operational vertical sounder data to a vertical view
[NOAA-TR-NESDIS-64] p 3071 N93-27059

TISSUES (BIOLOGY)
Dose in water from external irradiation by electrons: Radiation protection data
[PB93-173425] p 3131 N93-27425

TITANIUM
Joining carbon composite fins to titanium heat pipes
[AD-A261970] p 2991 N93-27667
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682

TITANIUM ALLOYS
Modeling fatigue crack growth in cross ply titanium matrix composites
[NASA-TM-108988] p 2990 N93-27062
Fundamentals of mechanical behavior in intermetallic compounds
[AD-A262443] p 2999 N93-27660

TITANIUM OXIDES
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060

TOKAMAK DEVICES
Plasma confinement theory and transport simulation
[DE93-009755] p 3149 N93-26617
Coherent structures in tokamak plasmas workshop: Proceedings
[DE93-009558] p 3149 N93-28233
Development of a positronium atom diagnostic beam to study transport in tokamaks
[DE93-010916] p 3149 N93-28335
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348
Confinement and stability of VH-mode discharges in the D3-D tokamak
[DE93-008988] p 3150 N93-28349

TOLERANCES (MECHANICS)
Damage tolerance assessment and usage variation analysis for C-130 aircraft in the Israeli Air Force
p 2926 N93-27210

TOLUENE
Electron transfer, proton transfer and photoaddition reactions in isolated clusters
[AD-A262719] p 3137 N93-28398

TOMOGRAPHY
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681

TOPOGRAPHY
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244

TOPOLOGY
The Mathai-Quillen formalism and topological field theory
[NIKHEF-H/92-07] p 3155 N93-27496
Grid minors of graphs on the torus
[CWI-BS-R9205] p 3117 N93-27526
Classification of minimal graphs of given face-width on the torus
[CWI-BS-R9203] p 3117 N93-27607
Graphs on the torus and geometry of numbers
[CWI-BS-R9204] p 3117 N93-27608

TOROIDS
Classification of minimal graphs of given face-width on the torus
[CWI-BS-R9203] p 3117 N93-27607
Graphs on the torus and geometry of numbers
[CWI-BS-R9204] p 3117 N93-27608

TORQUE
Effects of solar radiation pressure torque on the rotational motion of an artificial satellite
p 2924 N93-27199
Solar sail attitude control including active nutation damping in a fixed-momentum wheel satellite
p 2925 N93-27203
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268

TORQUERS
TechSAT attitude control p 2924 N93-27197

TORSION
Tensile properties of epoxy encapsulants
[DE93-008494] p 3005 N93-28207

TORSIONAL VIBRATION
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564

TOTAL QUALITY MANAGEMENT
Application of quality function deployment to the design of a lithium battery
[DE93-008346] p 3033 N93-28459

TOUGHNESS
Aluminum alloys for ALS cryogenic tanks: Comparative measurements of cryogenic mechanical properties of Al-Li alloys and alloy 2219
[PB93-173441] p 2999 N93-27530
High-toughness graphite/epoxy composite material experiment p 2992 N93-28263

TOXIC HAZARDS
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
Evaluation of NO(x)-induced toxicity
[AD-A261034] p 3084 N93-28122

TOXICITY
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005

TOXICITY AND SAFETY HAZARD
Variations in time-to-incapacitation and blood cynanide values for rats exposed to two hydrogen cyanide gas concentrations
[DOT/FAA/AM-93-8] p 3083 N93-27158
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005

TOXINS AND ANTITOXINS
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989

TRACKING (POSITION)
Guidance law synthesis and evaluation for a strapdown seeker application p 2925 N93-27207

TRAFFIC
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636

TRAILING EDGE FLAPS
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252

TRAILING EDGES
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463

TRAJECTORIES
Second quantization in bit-string physics
p 3146 N93-27357
New approaches to linear and nonlinear programming
[DE93-010134] p 3103 N93-28214

TRAJECTORY ANALYSIS
Symmetries and motions in manifolds
[NIKHEF-H/92-08] p 3128 N93-27510
SOYUZ escape trajectory analysis from Space Station Freedom
[NASA-CR-4508] p 2954 N93-27609

TRAJECTORY CONTROL
Dynamics and control of a free flying two armed robot in space p 2923 N93-27196
Minimum effort interception of multiple targets
p 2925 N93-27205

TRAJECTORY OPTIMIZATION
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
Minimum effort interception of multiple targets
p 2925 N93-27205
Minimum Hamiltonian Ascent Trajectory Evaluation (MASTRE) program (update to automatic flight trajectory design, performance prediction, and vehicle sizing for support of Shuttle and Shuttle derived vehicles) engineering manual
[NASA-CR-192557] p 2957 N93-27592
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460

TRAJECTORY PLANNING
Interactive method for planning constrained fuel optimal proximity operations p 2925 N93-27204
Implicit point location in arrangements of line segments, with an application to motion planning
[RUU-CS-92-15] p 3116 N93-27505
Efficient grid based techniques for solving the Weighted Region Least Cost Path problem on multicomputers
[AD-A262153] p 3107 N93-27548
Intelligent robots for planetary exploration and construction p 3054 N93-27980
The complexity of the free space for motion planning amidst fat obstacles
[RUU-CS-92-31] p 3102 N93-28106
A random approach to motion planning
[RUU-CS-92-32] p 3110 N93-28107
An ultrasonic sensor controller for mapping and servo control in robotic systems
[DE93-009605] p 3046 N93-28160
Digital parallel processor array for optimum path planning
[NASA-CASE-NPO-18727-1-CU] p 3108 N93-28427
Adaptive path planning for incrementally-changing environments
[DE93-008411] p 3105 N93-28460

TRANSCONDUCTANCE
Pseudomorphic narrow gap materials for high performance devices
[AD-A263069] p 3152 N93-27926

TRANSFER FUNCTIONS
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
Active impedance matching of complex structural systems p 3060 N93-28169

TRANSFER ORBITS
Detail design of Mars transfer orbit
p 2953 N93-28046

TRANSFORMATIONS (MATHEMATICS)
A globally gated polling system with server interruptions, and applications to the repairman problem
[CWI-BS-R9208] p 3127 N93-27309
Virtual data structures
[RUU-CS-92-16] p 3097 N93-27506
On the fermionic Heisenberg group and its Q-representations
[NIKHEF-H/92-11] p 3117 N93-27542
Mathematical morphology as a tool for shape description
[CWI-BS-R9216] p 3119 N93-27991
Migration of seismic data in the double Radon transformed domain
[ETN-93-93596] p 3073 N93-28094
On the Bogdanov-Takens bifurcation for planar diffeomorphisms
[W-9202] p 3121 N93-28124
Inhomogeneous Toda lattice: Its hierarchy and Darboux-Backlund transformations
[SSCL-PREPRINT-762] p 3121 N93-28146
On Radon-Nikodym derivatives of finitely additive measures induced by nonlinear transformations on Hilbert space
[MEMO-1063] p 3129 N93-28147
Large deviations theory and stochastic gauge fixing
[SSCL-PREPRINT-739] p 3126 N93-28193
Commutative diagrams and tensor calculus in Riemann spaces
[SSCL-PREPRINT-741] p 3122 N93-28195

TRANSFORMERS
A planar quasi-optical SIS receiver for array applications p 3014 N93-27746

TRANSIENT RESPONSE
Neural self-tuning adaptive control of non-minimum phase system
[NASA-CR-193109] p 3109 N93-27109
Investigation of starting transients in the thermally choked ram accelerator p 2985 N93-27136
Influence of transverse-shear and large-deformation effects on the low-speed impact response of laminated composite plates
[NASA-TM-107753] p 2990 N93-27141
Passive damping augmentation of flexible beam-like lattice trusses for large space structures p 2923 N93-27192
Exact methods for modal transient response analysis including feedback control
[NASA-TP-3317] p 3057 N93-27585

TRANSISTORS
Active CPW-fed slot antennas for power combining applications p 3011 N93-27729
Wide range H2 sensor using catalytic alloys
[DE93-007591] p 3046 N93-28009

TRANSIT TIME
NEP processing, operations, and disposal p 2982 N93-26975

TRANSITION FLOW
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
A new direction in hydrodynamic stability: Beyond eigenvalues
[NASA-CR-191411] p 3040 N93-27688

TRANSITION METALS
Band electronic structures and crystal packing forces
[DE93-009763] p 3151 N93-26667
Study of intermediates from transition metal excited-state electron-transfer reactions
[DE93-010904] p 3137 N93-28359

TRANSLATING
Termination of term writing by interpretation
[RUU-CS-92-14] p 3114 N93-27381

TRANSLATIONAL MOTION
Implicit point location in arrangements of line segments, with an application to motion planning
[RUU-CS-92-15] p 3116 N93-27505

TRANSMISSION ELECTRON MICROSCOPY
Using coherent illumination to extend HRTEM resolution: Why we need a FEG-TEM for HREM
[DE93-007724] p 3030 N93-26612

TRANSMISSION LINES
Broadband millimeter-wave GaAs transmitters and receivers using planar bow-tie antennas p 3011 N93-27728
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
Radiation, scattering, and guidance of electromagnetic fields by arbitrarily shaped structures embedded in layered media
[AD-A262816] p 3028 N93-28224

TRANSMISSIONS (MACHINE ELEMENTS)
Fault detection of helicopter gearboxes using the multi-valued influence matrix method
[NASA-TM-106100] p 3049 N93-27069
Face-gear drives: Design, analysis, and testing for helicopter transmission applications
[NASA-TM-106101] p 3050 N93-27133
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268
Design considerations for ultra-precision magnetic bearing supported slides p 2960 N93-27562

TRANSMITTANCE
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385

TRANSMITTER RECEIVERS
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007

TRANSONIC FLOW
Parallel computing strategies for block multigrid implicit solution of the Euler equation p 2922 N93-27190
Three-dimensional compressible stability-transition calculations using the spatial theory p 2931 N93-27431
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method p 2935 N93-27455

TRANSPONDERS
The next generation of Palapa satellite (Palapa-C) p 3024 N93-26659

TRANSPORT AIRCRAFT
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252
Design, analysis, and control of large transport aircraft utilizing engine thrust as a backup system for the primary flight controls
[NASA-CR-192938] p 2946 N93-27308
World jet airplane inventory at year-end 1992
[PB93-174324] p 2928 N93-27405
High-lift aerodynamics: Prospects and plans p 2933 N93-27442
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447
Flow prediction over a transport multi-element high-lift system and comparison with flight measurements p 2934 N93-27448

TRANSPORT PROPERTIES
Leonardian fluid mechanics in the manuscript F
[PB93-178853] p 3040 N93-27411

TRANSPORT THEORY
Plasma confinement theory and transport simulation
[DE93-009755] p 3149 N93-26617
Fluctuations in quantum transport theories of nuclear matter
[KVI-930] p 3155 N93-27395
Curvilinear geometry transport discretizations in the thick diffusion limit
[DE93-007109] p 3117 N93-27615
Simulation of electron transport in quantum well devices p 3019 N93-27773

TRANSPORTATION
Airport landside planning and operations
[PB93-167880] p 2947 N93-26636
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419

TRANSPORTATION NETWORKS
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419

TRANSVERSE OSCILLATION
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330

TRAPPED PARTICLES
On the second harmonic electron cyclotron resonance heating and current drive experiments on T-10 and D3-D
[DE93-008987] p 3149 N93-28348

TRAPPING
Collective dynamics in dense fluid mixtures p 3041 N93-28069

TREES (MATHEMATICS)
On the treewidth and pathwidth of permutation graphs
[RUU-CS-92-13] p 3113 N93-27305
Using cached functions and constructors for incremental attribute evaluation
[RUU-CS-92-11] p 3094 N93-27369
A tourist guide through treewidth
[RUU-CS-92-12] p 3114 N93-27370
Speeding up parallelism detection for attribute grammars
[RUU-CS-92-18] p 3107 N93-27909
A resolution method for some systems of modal logic
[ISBN-90-9005125-2] p 3119 N93-27940
On parallel data structuring: A parallel priority queue
[RUU-CS-92-19] p 3108 N93-28061
A linear time algorithm for finding tree-decompositions of small treewidth
[RUU-CS-92-27] p 3102 N93-28103
Treewidth of chordal bipartite graphs
[RUU-CS-92-28] p 3102 N93-28104
Approximating treewidth and pathwidth of some classes of perfect graphs
[RUU-CS-92-29] p 3102 N93-28105
Drawing planar graphs using the lmc-ordering
[RUU-CS-92-33] p 3102 N93-28108

TRELLIS CODING
Modulation and coding for throughput-efficient optical free-space links
[NASA-CR-193079] p 3141 N93-27073

TRENDS
Current trends and prospects of telecommunications service demand by satellite in the Asia-Pacific region p 3022 N93-26641

TRIANGLES
Cuttings and applications
[RUU-CS-92-26] p 3122 N93-28166

TRIANGULATION
Some aspects of a 3-dimensional reference system for surveying in the Netherlands: Quality analysis of GPS phase observations
[REPT-92.1] p 3063 N93-27368

TRIBOLOGY
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366
Elastohydrodynamic lubrication of multilayered elastic solids p 3053 N93-28413

TROPICAL REGIONS
Sustainable agriculture and the environment in the humid tropics
[PB93-173920] p 3068 N93-27402
The role of global cloud climatologies in validating numerical models
[NASA-CR-193135] p 3070 N93-27536

TROPICAL STORMS
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

TROPOSPHERE
Effects of cloud-radiation interactions on tropospheric chemistry
[DE93-003465] p 3073 N93-28004

TRUNCATION ERRORS
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587

TRUSSES
An efficient solution procedure for the thermoelastic analysis of truss space structures p 2923 N93-27191
Passive damping augmentation of flexible beam-like lattice trusses for large space structures p 2923 N93-27192
Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-28171

TUNABLE LASERS
Development and applications of tunable, narrow band lasers and stimulated Raman scattering devices for atmospheric lidar
[NASA-CR-193160] p 3047 N93-27249

TUNERS
A low noise 410-495 heterodyne two tuner mixer, using submicron Nb/Al2O3/Nb tunneljunctions p 3013 N93-27743

TUNGSTEN
Surface and interface electronic structure: Three year activity report
[DE93-010209] p 3150 N93-26618
Providing adherent coatings on tungsten and tungsten alloys
[DE93-007505] p 3004 N93-28006

TUNGSTEN ALLOYS
Tungsten alloy technology
[AD-A262184] p 2999 N93-27682
Providing adherent coatings on tungsten and tungsten alloys
[DE93-007505] p 3004 N93-28006

TUNING
A transfer matrix approach to vibration localization in mistuned blade assemblies
[NASA-TM-106112] p 3056 N93-27088
Evaluation of integrated tuning elements with SIS devices p 3018 N93-27770

TUNNEL DIODES
A quasioptical resonant-tunneling-diode oscillator operating above 200 GHz p 3017 N93-27764
Transit-time devices as local oscillators for frequencies above 100 GHz p 3017 N93-27765
Negative Differential Resistance (NDR) frequency conversion with gain p 3017 N93-27766
Recent advances in superconducting-mixer simulations p 3018 N93-27768
Submillimeter wave detection with superconducting tunnel diodes p 3018 N93-27769
Resonant tunneling diodes as sources for millimeter and submillimeter wavelengths p 3018 N93-27772
Simulation of electron transport in quantum well devices p 3019 N93-27773

TURBINE BLADES
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640

TURBINE ENGINES
Experimental investigation of turbine disk cavity aerodynamics and heat transfer
[NASA-CR-193131] p 2943 N93-27115

TURBINE PUMPS
Experimental investigation of turbine disk cavity aerodynamics and heat transfer
[NASA-CR-193131] p 2943 N93-27115
Simulation of preburner sprays, volumes 1 and 2
[NASA-CR-193031] p 2994 N93-27223
Hybrid bearings for turbopumps and the like
[NASA-CASE-MFS-28491-1] p 3052 N93-28326

TURBOFAN AIRCRAFT
In-flight near- and far-field acoustic data measured on the Propfan Test Assessment (PTA) testbed and with an adjacent aircraft
[NASA-TM-103719] p 3129 N93-27058
TURBOGENERATORS
Lunar base thermal management/power system analysis and design p 3089 N93-27985
TURBOMACHINERY
MSFC nuclear thermal propulsion technology program p 2979 N93-26932
Computational modeling of nuclear thermal rockets p 2980 N93-26956
Magnetic bearing turbomachinery case histories and applications for space related equipment p 2959 N93-27557
TURBOPROP AIRCRAFT
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148
TURBULENCE
Remarks on turbulent constitutive relations
[NASA-TM-106116] p 3038 N93-27010
Increased heat transfer to elliptical leading edges due to spanwise variations in the freestream momentum: Numerical and experimental results
[NASA-TM-106150] p 3038 N93-27020
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble p 2936 N93-27457
Simulation of boundary-layer transition: Receptivity to spike stage
[NASA-CR-191413] p 3040 N93-27588
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610
A new direction in hydrodynamic stability: Beyond eigenvalues
[NASA-CR-191411] p 3040 N93-27688
The onset of vortex turbulence p 2938 N93-28251
Observations of turbulence in the surf zone
[AD-A262718] p 3081 N93-28397
TURBULENCE EFFECTS
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449
TURBULENCE MODELS
Remarks on turbulent constitutive relations
[NASA-TM-106116] p 3038 N93-27010
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
Unstructured mesh algorithms for aerodynamic calculations p 2933 N93-27444
Towards industrial-strength Navier-Stokes codes p 2938 N93-27468
TURBULENT BOUNDARY LAYER
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467
Towards industrial-strength Navier-Stokes codes p 2938 N93-27468
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
TURBULENT DIFFUSION
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Turbulent exchange coefficients over a Douglas fir forest
[KNMI-WR-91-02] p 3070 N93-27649
TURBULENT FLOW
Remarks on turbulent constitutive relations
[NASA-TM-106116] p 3038 N93-27010
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
Calculations of turbulent separated flows
[NASA-TM-106154] p 3039 N93-27161
Airfoil stability in turbulent flow p 2926 N93-27212
The addition of algebraic turbulence modeling to program LAURA
[NASA-TM-107758] p 3039 N93-27250
The remarkable ability of turbulence model equations to describe transition p 2931 N93-27432
The influence of bulges on boundary-layer instability p 2932 N93-27435
Calculation of fully three-dimensional separated flow with an unsteady viscous-inviscid interaction method p 2935 N93-27455
Prediction of airfoil stall using Navier-Stokes equations in streamline coordinates p 2936 N93-27456
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble p 2936 N93-27457
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
Pseudospectral simulation of compressible turbulence using logarithmic variables
[NASA-TM-107707] p 3040 N93-27586
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955
Quasi-homogeneous critical swirling flows in expanding pipes
[MEMO-1069] p 3042 N93-28154
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189
Steady heat transfer in a tube with turbulent flow
[OEFZS-4642] p 3042 N93-28205
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
TURBULENT HEAT TRANSFER
Steady heat transfer in a tube with turbulent flow
[OEFZS-4642] p 3042 N93-28205
TURBULENT JETS
Analysis of the effect of initial conditions on the initial development of a turbulent jet p 2932 N93-27434
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449
TURBULENT MIXING
Turbulent mixing layers in the interstellar medium of galaxies p 3198 N93-26863
TURING MACHINES
Undecidability in macroeconomics
[NASA-CR-192979] p 3169 N93-27013
TURNING FLIGHT
The effect of a finite roll rate on the miss-distance of a bank-to-turn missile p 2925 N93-27208
TWILIGHT GLOW
Magnetotail structures in a simulated Earth's magnetosphere
[NASA-CR-193090] p 3072 N93-27144
An assessment of twilight airglow inversion procedures using atmosphere explorer observations
[NASA-CR-193205] p 3072 N93-27483
TWISTING
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694
TWO DIMENSIONAL FLOW
A comparison between direct and iterative methods to solve the linear systems arising from a time-dependent 2D groundwater flow model
[CWI-NM-R9205] p 3113 N93-27302
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587
Steady incompressible flow around objects in general coordinates with a multigrid solution method
[REPT-92-48] p 3041 N93-27884
TWO DIMENSIONAL MODELS
Merging sparse optical flow and edge connectivity between image features: A representation scheme for 2-D display of scene depth p 2921 N93-27179
Moving-finite-element solution of time-dependent partial differential equations in two space dimensions
[CWI-NM-R9206] p 3113 N93-27303
Algebraic conformal field theory
[NIKHEF-H/91-26] p 3128 N93-27507
Determination of flow-regime boundaries for cohesive particles
[DE93-011542] p 3042 N93-28236
TWO PHASE FLOW
Resonant mode interactions and the bifurcation of combustion-driven acoustic oscillations in resonance tubes
[DE93-009448] p 2995 N93-28159
An experimental study of a plunging liquid jet induced air carryunder and dispersion
[AD-A262791] p 3043 N93-28405
TYPHOONS
The relationship between satellite-derived cloud parameters and measured maximum wind speed in the typhoon genesis stage p 3075 N93-26993

Ofeq-2 orbit, attitude, and flight evaluation p 2924 N93-27198

UNSTEADY AERODYNAMICS
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218

UNSTEADY FLOW
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
An aerodynamic model for one and two degree of freedom wing rock of slender delta wings
[NASA-CR-193130] p 2930 N93-27150
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Dynamic airfoil stall investigations p 2935 N93-27453
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454
Discrete-vortex simulation of pulsating flow on a turbulent leading-edge separation bubble p 2936 N93-27457
Prediction of vortex breakdown on a delta wing p 2936 N93-27459

UPPER ATMOSPHERE
Modeled mesoscale meteorological fields with four-dimensional data assimilation in regional scale air quality models
[PB93-167229] p 3067 N93-26607

UPWIND SCHEMES (MATHEMATICS)
Estimating uncertainty in computations of two-dimensional separated flows
[NASA-CR-189743] p 3040 N93-27587

URBAN PLANNING
Transportation planning, programming, land use, and applications of geographic information systems
[PB93-167815] p 3166 N93-27419
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515

URBAN RESEARCH
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515

UREAS
13 C NMR spectra of allosteric effectors of hemoglobin
[AD-A262979] p 3084 N93-28293

USER MANUALS (COMPUTER PROGRAMS)
TS software user manual for the Time Series program and utilities
[PB93-167518] p 3091 N93-26635
DADiSP processing guide p 2947 N93-26949
NEP power subsystem modeling p 2982 N93-26974
RENEW v3.2 user's manual, maintenance estimation simulation for Space Station Freedom Program
[NASA-TM-106006] p 3055 N93-27025
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055
User's manual for UCAP: Unified Counter-Rotation Aero-Acoustics Program
[NASA-CR-191064] p 3129 N93-27148
Software Management Environment (SME) release 9.4 user reference material
[NASA-CR-193173] p 3094 N93-27257
User's guide for the algorithm testing system/version 1.1
[PB93-175990] p 3096 N93-27408
Dynamic System Coupler Program (DYSCO 4.1). Volume 2: User's manual
[AD-B131157L] p 3099 N93-27589
Dynamic System Coupler Program (DYSCO 4.1). Volume 3: User's manual supplement
[AD-B131158L] p 3099 N93-27590
User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs
[RTP/2180/01] p 3099 N93-27852
GWB: Manual for the Grammar Work Bench, version 1.0
[TR-91-28] p 3100 N93-27885
WAVEPACK: Basic concepts of linear wave propagation
[MEMO-1068] p 3041 N93-28077
MASTRE trajectory code update to automate flight trajectory design, performance predictions, and vehicle sizing for support of shuttle and shuttle derived vehicles: Programmers manual
[NASA-CR-192558] p 2954 N93-28321
Analysis of dynamical plasma interactions with high-voltage spacecraft, volume 2
[AD-A262784] p 2974 N93-28402

V

V-22 AIRCRAFT
Bureaucracies at war: The V-22 osprey program
[AD-A262451] p 3164 N93-27828

V/STOL AIRCRAFT
Performance characteristics of a variable-area vane nozzle for vectoring an ASTOVL exhaust jet up to 45 deg
[NASA-TM-106114] p 2944 N93-27131
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449

VACUUM
Metallurgy and properties of plasma spray formed materials
[NASA-TM-108269] p 3003 N93-27125
Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

VACUUM CHAMBERS
A study of thermal hydraulic and kinetic phenomena in HYLIFE-2: An inertial confinement fusion reactor
[DE93-008372] p 3150 N93-28421

VACUUM DEPOSITION
X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
Extremely high rate deposition of polymer multilayer optical thin film materials
[DE93-009127] p 3053 N93-28433

VACUUM EFFECTS
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914

VALENCE
Atomic supersymmetry p 3146 N93-27353

VAPOR DEPOSITION
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Deposition and modification of tantalum carbide coatings on graphite by laser interactions
[DE93-008055] p 3003 N93-27052
Providing adherent coatings on tungsten and tungsten alloys
[DE93-007505] p 3004 N93-28006
Pseudomorphic stabilization of diamond on non-diamond substrates: Heteroepitaxially grown diamond on a c-BN(111) surface
[AD-A262106] p 3154 N93-28180
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304
Ion beam assisted deposition of tribological coatings
[DE93-011520] p 3006 N93-28366

Fabrication of commercial-scale fiber-reinforced hot-gas filters by chemical vapor deposition
[DE93-010762] p 2992 N93-28457
Diamond: A new high thermal conductivity substrate for multichip modules and hybrid circuits
[DE93-008337] p 3033 N93-28458

VAPOR PHASE EPITAXY
Innovative optoelectronic materials and structures using OMVPE
[AD-A262202] p 3152 N93-27683

VAPOR PHASES
A kinetic and equilibrium analysis of silicon carbide chemical vapor deposition on monofilaments
[NASA-TM-106137] p 2988 N93-27003
Partial oxidation of ethane and ethylene in the presence and absence of C-13 labeled methane on reducible and non-reducible oxide catalysts
[DE93-008252] p 2994 N93-27485
Novel gas phase ion molecule reactions of C60(+) with O2
[AD-A262821] p 3136 N93-28225

VARACTOR DIODES
Varactor diodes for millimeter and submillimeter wavelengths p 3012 N93-27733
A Schottky/2-DEG varactor diode for millimeter and submillimeter wave multiplier applications p 3012 N93-27734
Thermionic emission current in a single barrier varactor p 3012 N93-27735
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
Effect of cooling on the efficiency of Schottky varactor frequency multipliers at millimeter waves p 3012 N93-27737
Superlattice barrier varactors p 3012 N93-27738
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
A 200 GHz tripler using single barrier varactor p 3013 N93-27740
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
Monolithic millimeter-wave diode grid frequency multiplier arrays p 3019 N93-27775

VARIABILITY
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635

VARIANCE (STATISTICS)
The best variety or an almost best one? A comparison of subset selection procedures
[MEMO-COSOR-92-22] p 3123 N93-27237

VARIATIONAL PRINCIPLES
Electronic structure theory of alloy phase stability
[DE93-009547] p 3000 N93-28232
Filtering, statistical signal processing and variational problems
[AD-A262276] p 3028 N93-28238

VECTOR MESONS
First calculation of D(+) approaches (K bar)(*0)e(+)nu(sub e) in lattice QCD
[SSCL-PREPRINT-748] p 3135 N93-28208
Theory of photon and electron induced reactions
[DE93-005925] p 3137 N93-28368

VECTOR SPACES
Introduction to a behavioral approach of continuous-time systems
[MEMO-COSOR-92-05] p 3112 N93-27244
Introduction to a behavioral approach of continuous-time systems, part 2
[MEMO-COSOR-92-17] p 3112 N93-27245
Integral solution to systems Ax less than or equal to b
[CWI-BS-R9217] p 3119 N93-27992

VECTORS (MATHEMATICS)
The Monte Carlo/S(sub N) hybrid method with orthogonal interface basis vectors
[DE93-005462] p 3104 N93-28299

VEGETATION
An expert system shell for inferring vegetation characteristics: Changes to the historical cover type database (Task F)
[NASA-CR-193067] p 3063 N93-27072
Chicago's evolving urban forest: Initial report of the Chicago urban forest climate project, 1993
[PB93-174050] p 3069 N93-27515
Energy balance components of irrigated crops in north-central Oregon
[DE93-003704] p 3078 N93-27611
A hierarchical framework for coupling surface fluxes to atmospheric general circulation models: The homogeneity test
[DE93-004804] p 3072 N93-27612
Terrestrial biogeochemical cycling and vegetation response to climate in an Earth system model
[DE93-003464] p 3070 N93-28057

VEGETATIVE INDEX
Study of atmospheric and bidirectional effects on surface reflectance and vegetation index time series: Application to NOAA AVHRR and preparation for future space missions
[NASA-CR-193158] p 3064 N93-28417

VELOCITY DISTRIBUTION
The peculiar velocities of rich clusters in the hot and cold dark matter scenarios p 3174 N93-26724
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
The galaxy velocity field and CDM models p 3176 N93-26737
Do galactic potential wells depend on their environment? p 3177 N93-26739
The velocity fields of elliptical galaxies: Steps toward a solution of the intrinsic shape problem p 3188 N93-26810
A new giant luminous arc gravitational lens associated with a z = 0.62 galaxy cluster, and the environments of distant radio galaxies p 3200 N93-26873
The effects of flaring in H1 on the observed velocity field of spirals p 3203 N93-26889
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Prediction of propellant behavior in spinning flow of a space motor p 2923 N93-27193
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449

VELOCITY MEASUREMENT
Fuzzy logic particle tracking velocimetry
[NASA-TM-106194] p 3045 N93-27027
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Velocity and drop size measurements in a swirl-stabilized, combusting spray
[NASA-TM-106130] p 2944 N93-27130
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454

VENTILATION
Ventilation effects on smoke and temperature in an aircraft cabin quarter-scale model
[DOT/FAA/CT-89/25] p 2941 N93-28055

VENUS (PLANET)
Regional tectonic analysis of Venus equatorial highlands and comparison with Earth-based Magellan radar images
[NASA-CR-192996] p 3210 N93-27164

VERTICAL DISTRIBUTION
A new method to simulate vertical and horizontal structure in galactic disks p 3188 N93-26809
The vertical disk structure of the edge-on spiral galaxy NGC 3079 p 3199 N93-26867

VERTICAL LANDING
Vertical landing on an asteroid p 2924 N93-27202

VERTICAL MOTION
Airmass modification by vertical motion: Discussion and case study
[PB93-160596] p 3079 N93-28134

VERTICAL TAKEOFF
Analysis of the staging maneuver and booster glideback guidance for a two-stage, winged, fully reusable launch vehicle
[NASA-TP-3335] p 2955 N93-27016

VERTICAL TAKEOFF AIRCRAFT
Transition aerodynamics for 20-percent-scale VTOL unmanned aerial vehicle
[NASA-TM-4419] p 2928 N93-27032
The design of a robust autopilot for the Archytas prototype via linear quadratic synthesis
[AD-A262151] p 2946 N93-27546

VERY LARGE ARRAY (VLA)
Reduction and analysis of VLA maps for 281 radio-loud quasars using the UNLV Cray Y-MP supercomputer p 3197 N93-26855
Characterization of lunar surface materials for use in construction p 3211 N93-27959

VERY LOW FREQUENCIES
A review of the ionospheric model for the long wave prediction capability
[AD-A262283] p 3074 N93-28243

VHSIC (CIRCUITS)
Embedded multiprocessor technology for VHSIC insertion p 2964 N93-27713

VIBRATION
Vibration and noise analysis of a gear transmission system
[NASA-TM-106162] p 3051 N93-27641
Energy and chemical change
[AD-A262359] p 3133 N93-27648

VIBRATION DAMPING
Dynamic characteristics of specialty composite structures with embedded damping layers
[NASA-TM-106165] p 2989 N93-26705
Analysis of virtual passive controllers for flexible space structures
[NASA-CR-193084] p 3050 N93-27145
Six degree of freedom active vibration damping for space application
[NASA-CR-193028] p 3056 N93-27165
Passive damping augmentation of flexible beam-like lattice trusses for large space structures p 2923 N93-27192
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
Magnetic Actuators and Suspension for Space Vibration Control
[NASA-CR-193038] p 3057 N93-27594
Generation of helical gears with new surfaces, topology by application of CNC machines
[NASA-TM-106175] p 3051 N93-27687
Implementation of input command shaping to reduce vibration in flexible space structures p 3059 N93-27901
Optical interferometer testbed p 3060 N93-28168
Inhibiting multiple mode vibration in controlled flexible systems p 3061 N93-28172
Active damping control of a flexible space structure using piezoelectric sensors and actuators
[AD-A262884] p 2973 N93-28248
The effect of chromatic decoherence on transverse injection oscillation damping
[DE93-008876] p 3139 N93-28330

VIBRATION ISOLATORS
Six degrees of freedom vibration isolation using electromagnetic suspension p 2960 N93-27559
A magnetic isolation and pointing system for the astrometric telescope facility p 2960 N93-27563
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564
Magnetic Actuators and Suspension for Space Vibration Control
[NASA-CR-193038] p 3057 N93-27594
Evaluation of actuators for the SDOF and MDOF active microgravity isolation systems p 3057 N93-27595
Control design for the SERC experimental testbeds p 3058 N93-27891

VIBRATION MEASUREMENT
Fault detection of helicopter gearboxes using the multi-valued influence matrix method
[NASA-TM-106100] p 3049 N93-27069

VIBRATION TESTS
Magnetic Gimbal Proof-of-Concept Hardware performance results p 2960 N93-27564
A preliminary structural analysis of space-based inflatable tubular frame structures p 3086 N93-27849

VIBRATIONAL SPECTRA
Hot bands in overtone absorption transitions: High temperature spectra
[AD-A262213] p 3133 N93-27685

VIDEO COMMUNICATION
Evolving technologies for Space Station Freedom computer-based workstations p 2967 N93-27794

VIDEO DATA
Data compression techniques for digital video recording
[ETN-93-93610] p 3166 N93-27881

VIDEO EQUIPMENT
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 3085 N93-28128

VIDEO SIGNALS
Picture data compression coder using subband/transform coding with a Lempel-Ziv-based coder
[NASA-CASE-LEW-15700-1] p 3168 N93-28130

VIETNAM
Communication service by satellite link in Vietnam p 3024 N93-26657

VIKING LANDER 1
Erosional and depositional history of central Chryse Planitia
[NASA-CR-193068] p 3210 N93-27497

VIRGO GALACTIC CLUSTER
A comparison of the near-infrared spectral features of early-type galaxies in the Coma Cluster, the Virgo cluster and the field p 3173 N93-26718
A revised catalog of CfA galaxy groups in the Virgo/Great Attractor flow field p 3175 N93-26725
Gas-rich dwarf galaxies in dense and sparse environments p 3186 N93-26795
Molecular gas content of galaxies in the Hydra-Centaurus supercluster p 3188 N93-26807
High chemical abundances in stripped Virgo spiral galaxies p 3191 N93-26825

VIRIAL COEFFICIENTS
Acoustic determination of phase equilibria
[PB93-167120] p 3129 N93-26606
VIRTUAL MEMORY SYSTEMS
Consistency management for virtually indexed caches
[AD-A261952] p 3100 N93-27920
VIRULENCE
Intracellular targeting of the Yersinia YopE cytotoxin in mammalian cells induces actin microfilament disruption
[FOA-B-40420-4.4] p 3082 N93-27989
Plasmid encoded virulence of Yersinia
[FOA-B-40419-4.4] p 3082 N93-28199
VISCOELASTICITY
Finite element methods for non-Newtonian flows
[DE93-006458] p 3042 N93-28149
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
Viscoelastic characterization of thin-film polymers exposed to low Earth orbit p 3007 N93-28260
VISCOSITY
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
Collective dynamics in dense fluid mixtures p 3041 N93-28069
VISCOUS DAMPING
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
VISCOUS FLOW
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
The generation of side force by distributed suction
[NASA-CR-193129] p 3039 N93-27151
Efficient simulation of incompressible viscous flow over multi-element airfoils p 2933 N93-27443
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
Adaptive multigrid domain decomposition solutions for viscous interacting flows p 2937 N93-27463
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations p 2937 N93-27465
Ship viscous flow: A report on the 1990 SSPA-IIHR Workshop p 2937 N93-27466
Navier-Stokes simulation of viscous, separated, supersonic flow over a projectile rotating band
[AD-A263073] p 2938 N93-27955
Axisymmetric vortex sheet roll-up p 2938 N93-28078
Mesh adaption for compressible flows
[INRIA-RR-1683] p 3043 N93-28443
VISCOUS FLUIDS
On the instability of the flow in an oscillating tank of fluid
[NASA-CR-191424] p 3037 N93-26896
VISIBLE INFRARED SPIN SCAN RADIOMETER
A noise level analysis of special multiple-spin VAS data during storm-fest
[NOAA-TR-NESDIS-65] p 3071 N93-27079
VISIBLE SPECTRUM
Visible spectrum of stable sonoluminescence
[AD-A262096] p 3032 N93-28188
VISUAL FIELDS
Visual field information in nap-of-the-Earth flight by teleoperated helmet-mounted displays p 2920 N93-27177
VISUAL OBSERVATION
LDEF materials data analysis: Representative examples p 2998 N93-28285
VISUAL SIGNALS
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307
VOICE COMMUNICATION
Iridium: Covering the globe with personal communication p 3022 N93-26644
Satellite communication services for Tibet autonomous region by domestic satellite in China p 3023 N93-26650
High data rate long pulse compression waveform communication system for M-ray encoding voice messages for air traffic control systems
[AD-D015682] p 3026 N93-27007
VOIDS
NDE of PWA 1480 single crystal turbine blade material
[NASA-TM-106140] p 2945 N93-27640
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
VOIGT EFFECT
The Lyman alpha forest of the high-z quasar 0000-263 p 3203 N93-26890
VOLATILITY
Abundance of He-3 and other solar-wind-derived volatiles in lunar soil p 3209 N93-26692
VOLTAGE CONTROLLED OSCILLATORS
Parallel arrays of Josephson junctions for submillimeter local oscillators p 3019 N93-27774
VOLTERRA EQUATIONS
Stability of parallel Volterra-Runge-Kutta methods
[CWI-NM-R9207] p 3106 N93-27304
Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084
VORTEX BREAKDOWN
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
VORTEX RINGS
Axisymmetric vortex sheet roll-up p 2938 N93-28078
VORTEX SHEDDING
Effect of rotation rate on the forces of a rotating cylinder: Simulation and control
[NASA-CR-191442] p 3037 N93-27008
Spurious frequencies as a result of numerical boundary treatments p 2919 N93-27170
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
VORTEX SHEETS
Axisymmetric vortex sheet roll-up p 2938 N93-28078
VORTEX STREETS
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
VORTICES
Roughness-induced generation of crossflow vortices in three-dimensional boundary layers
[NASA-CR-4505] p 2929 N93-27096
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
Leading edge vortices in a chordwise periodic flow p 2927 N93-27218
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428
The transition prediction toolkit: LST, SIT, PSE, DNS, and LES p 2931 N93-27429
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Simultaneous mapping of the unsteady flow fields by Particle Displacement Velocimetry (PDV) p 2935 N93-27454
Prediction of vortex breakdown on a delta wing p 2936 N93-27459
Axisymmetric vortex sheet roll-up p 2938 N93-28078
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
The onset of vortex turbulence p 2938 N93-28251
Microstructural factors influencing critical-current densities of high-temperature superconductors
[DE93-006651] p 3032 N93-28329
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449
VORTICITY
Investigation of forced unsteady separated flows using velocity-vorticity form of Navier-Stokes equations p 2935 N93-27451
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244
VSAT (NETWORK)
Data communications service by VSAT network in the Philippines p 3024 N93-26655
Information Switching Processor (ISP) contention analysis and control
[NASA-CR-191130] p 2957 N93-28416
VULNERABILITY
User guide to FTSCORE: A replacement program for SCORE in the TANKILL suite of vulnerability assessment programs
[RTP/2180/01] p 3099 N93-27852

W

WAFERS
Development of model based magnetic LP-LEC growth of large diameter GaAs
[AD-A262361] p 3152 N93-27690
A new fabrication technique for back-to-back varactor diodes p 3013 N93-27739
WAKEFULNESS
The use of electrophysiological and cognitive variables in the assessment of degradation during periods of sustained wakefulness
[AD-A263033] p 3084 N93-27923
WAKES
Numerical simulations of galactic wakes p 3189 N93-26818
Quantitative three-dimensional low-speed wake surveys p 2934 N93-27447
Some recent applications of Navier-Stokes codes to rotorcraft p 2935 N93-27452
WALKING MACHINES
Intelligent robots for planetary exploration and construction p 3054 N93-27980
WALL FLOW
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
Turbulence: The chief outstanding difficulty of our subject p 2931 N93-27428
An interactive boundary-layer approach to multielement airfoils at high lift p 2934 N93-27445
Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer p 2937 N93-27462
The turbulent boundary layer: Spanwise structure, evolution of low-velocity regions and response to artificial disturbances
[ETN-93-93606] p 3040 N93-27878
WALL PRESSURE
High spatial resolution measurements in a single stage ram accelerator p 2985 N93-27135
WALL TEMPERATURE
Three-dimensional compressible stability-transition calculations using the spatial theory p 2931 N93-27431
A unified approach for numerical simulation of viscous compressible and incompressible flows over adiabatic and isothermal walls p 2936 N93-27458
WALLS
Direct measurements of skin friction in supersonic combustion flow fields
[AD-A262878] p 2995 N93-28226
WARFARE
A simplified dynamic game model for anti-missile defense scenarios p 2925 N93-27206
WARNING SYSTEMS
Communications and tracking technology discipline p 2972 N93-27856
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289
WASTE DISPOSAL
Onsite engineering report for solidification/stabilization treatment testing of contaminated soils
[PB93-166965] p 3067 N93-26605
Status and integration of the gas generation studies performed for the hydrogen safety program
[DE93-008518] p 2994 N93-27105
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148
WASTE ENERGY UTILIZATION
MHD contractors' review conference
[DE93-009883] p 3149 N93-28332
WASTE TREATMENT
In-situ materials processing systems and bioregenerative life support systems interrelationships p 2992 N93-26695
Effluent treatment for nuclear thermal propulsion ground testing p 2955 N93-26969
Extraction chromatography of neodymium by an organophosphorous extractant supported on various polymeric resins
[DE93-009113] p 3003 N93-27622
Environmental control and life support system p 2965 N93-27718
Technologies for ECLSS evolution p 2965 N93-27720
JSC ECLSS R/T program overview p 2966 N93-27725
Applications of molten salts in reactive metals processing
[DE93-003368] p 3000 N93-28148

WASTE WATER
Environmental control and life support systems
p 2972 N93-27858
WATER CIRCULATION
BETELGUEUSE '90 campaign
[PREPRINT-751] p 3064 N93-27942
BOOTES '90 campaign
[PREPRINT-768] p 3064 N93-27943
WATER COOLED REACTORS
Austrian contributions to reactor safety research
[OEFZS-4622] p 3139 N93-28203
WATER DEPTH
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
WATER MANAGEMENT
Determination of regional evapotranspiration from measurements of the atmospheric boundary layer
[PB93-172971] p 3072 N93-27422
Technologies for ECLSS evolution
p 2965 N93-27720
Alternative processes for water reclamation and solid waste processing in a physical/chemical bioregenerative life support system p 2965 N93-27721
WATER POLLUTION
Development document for effluent limitations guidelines and new source performance standards for the offshore subcategory of the oil and gas extraction point source category
[PB93-167310] p 3067 N93-26608
Methods for the determination of diesel, mineral, and crude oils in offshore oil and gas industry discharges
[PB93-166932] p 3067 N93-26621
Cost-effectiveness analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-169118] p 3067 N93-26623
Regulatory impact analysis of final effluent limitations guidelines and standards for the offshore oil and gas industry
[PB93-174613] p 3069 N93-27406
Organic phosphorus compounds in the hydrosphere: Characteristics, identity, and dynamics
[PB93-173011] p 3069 N93-27423
Economic impact analysis of final effluent limitations guidelines and standards of performance for the offshore oil and gas industry
[PB93-173979] p 3069 N93-27512
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
WATER RECLAMATION
Alternative processes for water reclamation and solid waste processing in a physical/chemical bioregenerative life support system p 2965 N93-27721
Marshall Space Flight Center ECLSS technology activities p 2966 N93-27724
JSC ECLSS R/T program overview
p 2966 N93-27725
Environmental control and life support systems
p 2972 N93-27858
WATER SPLITTING
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-27969
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973
WATER TREATMENT
In-situ materials processing systems and bioregenerative life support systems interrelationships
p 2992 N93-26695
Operation of a solar photocatalytic water treatment system at a Superfund Site
[DE93-005354] p 3065 N93-28060
WATER VAPOR
Geothermal research and development program
[DE93-008400] p 3071 N93-26671
Molecular processes in comets
[NASA-CR-193143] p 3204 N93-27537
RADTRAN with spherical-refractive geometry
[AD-A263213] p 3075 N93-28385
WATER WAVES
Alongshore sub-thermocline current variability in the central California current system
[AD-A262150] p 3079 N93-27635
A real-time wave data quality control algorithm
[KNMI-TR-139] p 3080 N93-27637
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Internal gravity waves at abrupt topography
[AD-A262286] p 3080 N93-28244
Wave information studies of US coastlines: Verification of Pacific Ocean deepwater hindcast wave information
[AD-A262714] p 3081 N93-28396
Observations of turbulence in the surf zone
[AD-A262718] p 3081 N93-28397
WAVE ATTENUATION
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
Utilization of polymer viscoelastic properties to enhance acoustic wave sensor performance
[DE93-008345] p 3130 N93-28153
WAVE DISPERSION
Numerical simulation of free shear flows: Towards a predictive computational aeroacoustics capability
[NASA-CR-191015] p 2929 N93-27097
An analysis of the saturation of a high gain FEL
[DE93-007276] p 3048 N93-28314
WAVE EQUATIONS
On the accurate long-time solution of the wave equation in exterior domains: Asymptotic expansions and corrected boundary conditions
[NASA-TM-106117] p 3111 N93-27068
WAVEPACK: Basic concepts of linear wave propagation
[MEMO-1068] p 3041 N93-28077
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191
WAVE FUNCTIONS
Wave packet motion in harmonic potential and computer visualization p 3141 N93-27315
Point form relativistic quantum mechanics and relativistic SU(6) p 3144 N93-27332
Quantum wormholes and harmonic oscillators
p 3144 N93-27338
Quantized discrete space oscillators
p 3146 N93-27349
Covariant harmonic oscillators: 1973 revisited
p 3147 N93-27358
Calculation of the nucleon structure function from the nucleon wave function p 3147 N93-27359
WAVE GENERATION
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736
A 200 GHz tripler using single barrier varactor
p 3013 N93-27740
WAVE INTERACTION
On the initial stages of vortex wave interactions in highly curved boundary layer flows
[NASA-CR-191423] p 3038 N93-27098
On the interactions between detonation waves and shock waves in the external propulsion method for acceleration of projectiles p 2927 N93-27219
Berry's phase for non-conservative systems
[SSCL-PREPRINT-767] p 3117 N93-27582
WAVE PACKETS
Analysis of magnetometer data/wave signals in the Earth's magnetosphere
[NASA-CR-193169] p 3072 N93-27154
Wave packet motion in harmonic potential and computer visualization p 3141 N93-27315
Alternative descriptions of wave and particle aspects of the harmonic oscillator p 3142 N93-27317
Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340
WAVE PROPAGATION
A numerical study of wave propagation in a confined mixing layer by eigenfunction expansions
[NASA-CR-191433] p 3037 N93-26998
On wave propagation in saturated and partially saturated porous media
[ETN-93-93152] p 3039 N93-27373
Migration of seismic data in the double Radon transformed domain
[ETN-93-93596] p 3073 N93-28094
Wave propagation, localisation and dispersion in softening solids
[ISBN-90-9005139-2] p 3042 N93-28110
A three-dimensional coupled normal mode model for sound propagation in shallow water with irregular bottom bathymetry
[AD-A262101] p 3130 N93-28179
Microcomputer simulation of a Fourier approach to ultrasonic wave propagation
[AD-A262090] p 3131 N93-28191
WAVE SCATTERING
Radar imaging of the sea surface using different polarizations: Comparison between theory and experiment
[PB93-161768] p 3062 N93-27054
On the accurate long-time solution of the wave equation in exterior domains: Asymptotic expansions and corrected boundary conditions
[NASA-TM-106117] p 3111 N93-27068
Crustal and upper mantle velocity gradients in the vicinity of the East Kazakh test site: Ray synthesis of Lg in three-dimensional crustal models
[AD-A263209] p 3075 N93-28384
WAVEGUIDE ANTENNAS
Loaded Cavity-Backed Slot (LCBS) antennas for reentry vehicles
[DE93-008363] p 3025 N93-26670
The Third International Symposium on Space Terahertz Technology: Symposium proceedings
[NASA-CR-193013] p 3011 N93-27726
Analysis of a novel non-contacting waveguide backshort p 3015 N93-27753
Silicon micromachined waveguides for millimeter and submillimeter wavelengths p 3015 N93-27754
WAVEGUIDES
A submillimeter tripler using a quasi-waveguide structure p 3013 N93-27741
Modelling and performance of Nb SIS mixers in the 1.3 mm and 0.8 mm bands p 3014 N93-27748
Comparison of measured and predicted performance of a SIS waveguide mixer at 345 GHz
p 3014 N93-27749
A low-noise 492 GHz SIS waveguide receiver
p 3015 N93-27750
WAVELENGTHS
Massive low surface brightness galaxies
p 3178 N93-26746
WAVERIDERS
Aerodynamic analysis of hypersonic waverider aircraft
[NASA-CR-192981] p 2929 N93-27093
WEAK INTERACTIONS (FIELD THEORY)
Semiweak production of a top quark accompanied by a bottom quark and 2 jets at hadron colliders
[NIKHEF-H/91-27] p 3132 N93-27508
Neutrino properties
[SSCL-PREPRINT-722] p 3204 N93-28095
WEAPON SYSTEMS
Data management standards in Computer-Aided acquisition and Logistic Support (CALS)
p 2964 N93-27714
WEAPONS DELIVERY
YF-22A prototype advanced tactical fighter demonstration/validation flight test program overview
p 2920 N93-27173
WEAR
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
Three-grid accelerator system for an ion propulsion engine
[NASA-CASE-NPO-18391-1-CU] p 2987 N93-28424
WEAR RESISTANCE
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
WEAR TESTS
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Brush seal low surface speed hard-rub characteristics
[NASA-TM-106169] p 3039 N93-27132
Investigation of multiply alkylated cyclopentane synthetic oil and lead naphthenate additive under boundary contact interactions
[ATR-93(8361)-1] p 2995 N93-27602
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011525] p 3005 N93-28218
Ion-beam-assisted deposition of wear-resistant coatings
[DE93-011120] p 3006 N93-28364
WEATHER
Mariners weather log, volume 37, number 1, winter 1993
[PB93-174308] p 3077 N93-27516
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116
WEATHER FORECASTING
Investigation of outflow strength variability in Florida downburst producing storms
[DOT/FAA/NR-93/5] p 3076 N93-27095
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534
Rapid marine cyclogenesis forecast sensitivity to high resolution sea surface temperatures during ERICA IOP-5
[AD-A262117] p 3079 N93-28183

Monthly mean sea ice data from the Polar Ice Prediction System (PIPS), the Regional Polar Ice Prediction System: Barents Sea (RPIPS-B), the Regional Polar Ice Prediction System: Greenland Sea (RPIPS-G), and the Polar Ice Prediction System 2.0 (PIPS 2.0)
[AD-A262794] p 3081 N93-28377

WEDGES
An apparatus for gripping test specimens
[NASA-CASE-LEW-15345-2] p 3052 N93-28127

WEIBULL DENSITY FUNCTIONS
Estimating characteristic life and reliability of an aircraft engine component improvement in the early stages of the implementation process
[AD-A262118] p 2945 N93-28184
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289

WEIGHT REDUCTION
A low-mass faraday cup experiment for the solar wind
[NASA-CR-193210] p 3217 N93-27078
Sikorsky Aircraft Advanced Rotorcraft Transmission (ART) program
[NASA-CR-191079] p 3050 N93-27268

WEIGHTING FUNCTIONS
Orbit-orbit branching rules p 3146 N93-27350

WEIGHTLESSNESS
Remarks about massive and massless particles in supersymmetry p 3138 N93-27335
The Middeck 0-gravity Dynamics Experiment (MODE) p 3010 N93-27893
MODE: Structural Test Article (STA) p 3059 N93-27894
Middeck 0-gravity dynamics experiment: Fluid slosh experiments p 3010 N93-27895
The 3rd Annual Controlled Structures Technology Symposium
[NASA-CR-192993] p 3060 N93-28167

WELD TESTS
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668

WELDED JOINTS
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253

WELDING
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593

WELLS
Geothermal research and development program
[DE93-008400] p 3071 N93-26671
Improving reservoir conformance using gelled polymer systems
[DE93-010078] p 3002 N93-26942

WESTERN HEMISPHERE
Annular Solar Eclipse of 10 May 1994
[NASA-RP-1301] p 3169 N93-27057

WETTING
Wetting oxidized Fe, Ni, Co alloy with copper
[DE93-009604] p 2999 N93-27624

WHISKER COMPOSITES
Fundamental alloy design of oxide ceramics and their composites
[DE93-010249] p 2989 N93-26944
Interactive reliability model for whisker-toughened ceramics
[NASA-CR-191048] p 3002 N93-27006

WHITE DWARF STARS
Ages, chemistry, and type 1A supernovae: Clues to the formation of the galactic stellar halo p 3187 N93-26803

WHITE NOISE
A representation result for nonlinear filter maps on a white noise framework
[MEMO-1062] p 3129 N93-28013

WIND (METEOROLOGY)
Meteorological Satellite Center Technical Note, no. 25, 1992
[MSC-TN-25] p 3075 N93-26991
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-193045] p 3072 N93-27284
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534

WIND DIRECTION
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

WIND PROFILES
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

WIND SHEAR
A statistical characterization of Denver-area microbursts
[AD-A262127] p 3078 N93-27675

WIND TUNNEL CALIBRATION
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189

WIND TUNNEL TESTS
Assessment of a flow-through balance for hypersonic wind tunnel models with scramjet exhaust flow simulation
[NASA-TM-4441] p 2928 N93-27005
Transition aerodynamics for 20-percent-scale VTOL unmanned aerial vehicle
[NASA-TM-4419] p 2928 N93-27032
A shadowgraph study of two proposed Shuttle-C launch vehicle configurations
[NASA-RP-1303] p 2930 N93-27123
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
Comparison of reacting and non-reacting shear layers at a high subsonic Mach number
[NASA-TM-106198] p 2945 N93-27610
Strain actuated aeroelastic control p 3059 N93-27899
Studies of origin of three-dimensionality in laminar wakes
[AD-A262281] p 3042 N93-28242

WIND TUNNELS
Modification and calibration of the Naval Postgraduate School Academic Wind Tunnel
[AD-A262092] p 2947 N93-28189

WIND VELOCITY
Including maximum sustained wind speed in a time series model to forecast hurricane movement
[AD-A262510] p 3078 N93-27663
A synoptic comparison of special sensor microwave/imager displays with numerical products
[AD-A261960] p 3078 N93-27949
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

WIND VELOCITY MEASUREMENT
A comparison of GMS low-level cloud motion winds with sea surface winds observed by ships over western part of the North Pacific Ocean p 3076 N93-26995
Evaluations of 404 MHz radar wind profiler observations at Okinawa during TCM-90
[AD-A262701] p 3079 N93-28392

WINDOWS (APERTURES)
Chemical analyses of provided samples
[NASA-CR-193207] p 2993 N93-27000

WINDPOWER UTILIZATION
Summary results of an assessment of research projects in the Solar Federal Wind Energy Research Program
[DE93-005743] p 3065 N93-28302

WINDS ALOFT
Forecast of Atlantic seasonal hurricane activity for 1993 p 3077 N93-27534

WING LOADING
Towards an analytical treatment of the aerolastic problem of a circular wing p 2926 N93-27214
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220

WING OSCILLATIONS
Airfoil stability in turbulent flow p 2926 N93-27212
Effect of vortex behavior on loads acting on a 65 deg delta wing oscillating in roll at high incidence p 2927 N93-27220

WING PROFILES
Parallel computing strategies for block multigrid implicit solution of the Euler equation p 2922 N93-27190

WINGS
Adjoint methods for aerodynamic wing design
[NASA-CR-193086] p 2942 N93-27089
Probabilistic assessment of composite structures
[NASA-TM-106024] p 2990 N93-27092
Effect of underwing frost on transport aircraft takeoff performance
[DOT/FAA/CT-TN93/9] p 2940 N93-27252
Aerodynamics of a finite wing with simulated ice p 2932 N93-27437
Reynolds and Mach number effects on multielement airfoils p 2934 N93-27446
Analysis of the static and dynamic response of a T-38 wing and comparison with experimental data
[AD-A262363] p 2942 N93-27692
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694
Effect of pylon cross-sectional geometries on propulsion integration for a low-wing transport
[NASA-TP-3333] p 2938 N93-28070

WIRE
The 80 kV electrostatic wire septum for AmPS p 3139 N93-28340
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344

WIRELESS COMMUNICATION
The 1992 United Nations Workshop on Space Communication for Development: Proceedings p 3022 N93-26640
Iridium: Covering the globe with personal communication p 3022 N93-26644

WORK HARDENING
Modeling the behavior of materials
[DE93-010483] p 3060 N93-28161

X

X RAY ABSORPTION
The detection of large amounts of cool, x ray absorbing gas in distant clusters of galaxies. What does this mean? p 3194 N93-26841
Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309

X RAY ANALYSIS
Non-traditional ion beam analyses
[DE93-007590] p 3134 N93-28008

X RAY ASTRONOMY
Correlation between low level fluctuations in the x ray background and faint galaxies p 3179 N93-26752
The detection of large amounts of cool, x ray absorbing gas in distant clusters of galaxies. What does this mean? p 3194 N93-26841
Using x ray images to detect substructure in a sample of 40 Abell clusters p 3194 N93-26844
A study of the x ray environment of radio galaxies p 3194 N93-26845
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857

X RAY BINARIES
A comparative examination of LMC X-4 and Her X-1 x ray double star systems
[MPE-232] p 3205 N93-28202

X RAY DETECTORS
Solid state x ray detector calibration techniques and linac beam intensity measurements
[AD-A262097] p 3153 N93-28177
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178

X RAY DIFFRACTION
Development of germanium-silicon growth technology
[AD-A262891] p 3154 N93-28304

X RAY IMAGERY
An astrophysics data program investigation of spatial structure of supernova remnants
[NASA-CR-193104] p 3205 N93-28409
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456

X RAY LASERS
Workshop on scientific applications of short wavelength coherent light sources
[DE93-009617] p 3148 N93-28456

X RAY SCATTERING
Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178
Description and program activities of the Materials Research Laboratory
[DE93-010905] p 3226 N93-28334

X RAY SOURCES
Multicolor photometry of x ray selected Abell clusters p 3195 N93-26846
Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects p 3197 N93-26857
Powering the superwind in NGC 253 p 3203 N93-26893

X RAY SPECTRA
The hot interstellar medium in NGC 1399 p 3179 N93-26753
X ray opacity in cluster cooling flows p 3193 N93-26837

High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294

Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309

X RAY SPECTROSCOPY

Finding the rarest objects in the universe: A new, efficient method for discovering BL Lacertae objects
p 3197 N93-26857

An XPS study of space-exposed polyimide film
p 3007 N93-28267

High resolution near edge x ray spectroscopy
[DE93-003471] p 2996 N93-28294

X RAY STARS

A comparative examination of LMC X-4 and Her X-1 x ray double star systems
[MPE-232] p 3205 N93-28202

X RAYS

Using x ray images to detect substructure in a sample of 40 Abell clusters p 3194 N93-26844

X ray reflectivity measurements of vacuum deposited thin films
[DE93-007579] p 3004 N93-28007

Enhanced higher order parametric x radiation production
[AD-A262100] p 3135 N93-28178

Photoconductivity measurements of x ray absorption fine structures in liquids in the soft x ray region: Si and Cl K-edge
[DE93-006670] p 2996 N93-28309

Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311

Y

YANG-MILLS FIELDS

On the octonionic Nahm equations and self-dual membranes in 9 dimensions
[DE93-007974] p 3128 N93-26673

YANG-MILLS THEORY

On the octonionic Nahm equations and self-dual membranes in 9 dimensions
[DE93-007974] p 3128 N93-26673

Nonlinear modes of the tensor Dirac equation and CPT violation p 3145 N93-27340

Extended pure Yang Mills gauge theories with scalar and tensor gauge fields
[SSCL-PREPRINT-769] p 3156 N93-27583

A modified Faddeev-Popov formula and the Gribov ambiguity
[SSCL-PREPRINT-750] p 3157 N93-28209

Four dimensional quantum gravity: The covariant path integral and quantization of the conformal factor
[DE93-008726] p 3158 N93-28462

YBCO SUPERCONDUCTORS

Development of superconducting YBa2Cu3O(x) wires with low resistance electrical contacts
p 2962 N93-27575

Studies of structural damage in high-T(sub c) superconductors by high-energy heavy-ion irradiation
[DE93-005579] p 3136 N93-28301

Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347

YF-12 AIRCRAFT

The development of aircraft in the Lockheed Skunk Works from 1954 to 1991 p 2919 N93-27168

YIELD POINT

Effect of binders on the damage threshold and refractive index of coatings prepared from colloidal suspensions
[DE93-009068] p 3007 N93-28431

YIELD STRENGTH

Application of the cyclic J-integral to fatigue crack propagation p 2921 N93-27182

Fuzzy sets predict flexural strength and density of silicon nitride ceramics
[NASA-TM-106049] p 2991 N93-27270

Stress corrosion evaluation of HP 9Ni-4Co-0.20C steel
[NASA-TP-3384] p 3000 N93-28071

Stress corrosion evaluation of HP 9Ni-4Co-0.30C steel plate welds
[NASA-TP-3376] p 3001 N93-28253

YTTRIUM COMPOUNDS

Effects of composition on sintering of current interconnects in SOFC
[DE93-004837] p 3065 N93-27613

Z

ZEEMAN EFFECT

Zeeman spin splitting frequency renormalization in disordered interacting electronic systems
[SSCL-PREPRINT-755] p 3157 N93-28315

ZEOLITES

Studies on zeolites: Molecular mechanics, framework stability, and crystal growth
[ETN-93-93613] p 3152 N93-27935

Zeolite crystal growth and the structure on an atomic scale
[ETN-93-93615] p 3153 N93-27936

Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114

Electron transfer reactions in microporous solids
[DE93-011261] p 3154 N93-28216

ZINC COMPOUNDS

Tetrahedral-atom 3-ring groupings in one-dimensional inorganic chains: Be2AsO4OH-4H2O and Na2ZnPO4OH-7H2O
[AD-A262670] p 3134 N93-28114

ZIRCONIUM CARBIDES

Laser diagnostics for NTP fuel corrosion studies
p 2979 N93-26936

Material science experience gained from the space nuclear rocket program: Insulators
[DE93-006301] p 2992 N93-28303

ZIRCONIUM OXIDES

High resolution microstructural and microchemical analysis of zirconia eutectic interfaces
[DE93-010971] p 3001 N93-28362

Typical Personal Author Index Listing

ARMSTRONG, WILLIAM D. ..... p 27 N93-10277

PERSONAL AUTHOR | PAGE NUMBER | ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

A

AALTO, S. ..... p 3188 N93-26806

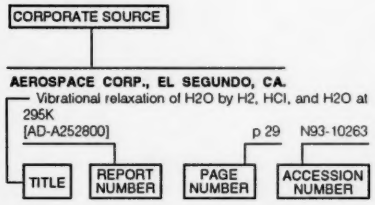
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMY OF SCIENCES, POTSDAM (GERMAN D.R.).
Luminosity segregation in galaxy clusters as an indication of dynamical evolution p 3192 N93-26834

ACADEMY OF SCIENCES (USSR), MOSCOW.
Distribution of photons in squeezed polymode light p 3143 N93-27325
Squeezed states of damped oscillator chain p 3143 N93-27329

ADMIRALTY RESEARCH ESTABLISHMENT, GOSPORT (ENGLAND).
HMS Speedy: Seakeeping trials, 25 February to 1 March 1982
[ARE-AMTE(H)-R84117] p 3021 N93-27853

ADTECH SYSTEMS RESEARCH, INC., DAYTON, OH.
Enhanced chromophore polymeric NLO materials
[AD-A262258] p 3147 N93-28111

ADVANCED AVIATION CONCEPTS, JUPITER, FL.
How expert pilots think: Cognitive processes in expert decision making
[DOT/FAA/RD-93/9] p 3085 N93-27103

AEROJET-GENERAL CORP., SACRAMENTO, CA.
LOX/hydrocarbon rocket engine analytical design methodology development and validation. Volume 1: Executive summary and technical narrative
[NASA-CR-191058-VOL-1] p 2987 N93-27535

AEROJET TECHSYSTEMS CO., SACRAMENTO, CA.
On-site manufacture of propellant oxygen from lunar resources p 3022 N93-27973

AEROSPACE CORP., EL SEGUNDO, CA.
Investigation of multiply alkylated cyclopentane synthetic oil and lead naphthenate additive under boundary contact interactions
[ATR-93(8361)-1] p 2995 N93-27602
Minimizing error in predicting the reliability of on-board satellite systems
[AD-A262212] p 2963 N93-27650
Processing effects on the mechanical behavior of polyarylacetylene-derived carbon-carbon composites
[AD-A262102] p 2991 N93-27672
Lubricants for high-vacuum applications
[AD-A263026] p 3004 N93-27914
Surface analyses of composites exposed to the space environment on LDEF p 2993 N93-28268
Contamination measurements on experiment M0003 p 2998 N93-28273
Thermal control paints on LDEF: Results of M0003 sub-experiment 18 p 3008 N93-28277
Long Duration Exposure Facility experiment M0003 deintegration observation data base p 3169 N93-28288
Handbook for the USAF space environment standard (MIL-STD-1809)
[AD-A262799] p 3074 N93-28379

AEROSPACE CORP., LOS ANGELES, CA.
Thermal expansion behavior of LDEF metal matrix composites p 2993 N93-28269

AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OH.
Theory of signal detection and its application to visual target acquisition: A review of the literature
[AD-A262920] p 3085 N93-28307

AGRICULTURAL RESEARCH SERVICE, BELTSVILLE, MD.
GRAMI: A crop growth model that can use remotely sensed information
[PB93-162014] p 3062 N93-27053
Opus: An integrated simulation model for transport of nonpoint-source pollutants at the field scale. Volume 2: User manual
[PB93-161628] p 3068 N93-27055

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.
Aviation production engineering: Selected articles
[AD-A261231] p 2919 N93-27056
Identification of significant outliers in time series data
[AD-A262437] p 3125 N93-27659
Self-Referenced Speckle Holography (SRSH) image reconstruction performance
[AD-A262487] p 3045 N93-27661
Including maximum sustained wind speed in a time series model to forecast hurricane movement
[AD-A262510] p 3078 N93-27663
A comparison of variable selection criteria for multiple linear regression: A second simulation study
[AD-A262512] p 3125 N93-27664
Detection performance of digital polarity sampled phase reversal code pulse compressors
[AD-A262930] p 3028 N93-28289

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OH.
Investigation of separation in a strap-on Space Shuttle system
[AD-A262372] p 2956 N93-27693
Computational method in optimal bending-twisting comprehensive design of wings of subsonic and supersonic aircraft
[AD-A262374] p 2943 N93-27694
Handbook on the climate of the USSR. Issue 14: Georgian SSR, Part 5: Cloud conditions and atmospheric phenomena
[AD-A262676] p 3078 N93-28116

AIRESEARCH MFG. CO., LOS ANGELES, CA.
Dust protection for environmental control and life support systems in the lunar environment p 3089 N93-27979

AKRON UNIV., OH.
Study of switching transients in high frequency converters
[NASA-CR-193105] p 3032 N93-28327

ALABAMA UNIV., HUNTSVILLE.
Numerical simulations of galactic wakes p 3189 N93-26818
Acceleration Studies
[NASA-CR-192547] p 2947 N93-26948
DADiSP processing guide p 2947 N93-26949
A comparison of low-gravity measurements on-board Columbia during STS-40 p 2948 N93-26950
Study of basic physical processes in liquid and solid rocket propulsion
[NASA-CR-192550] p 2986 N93-27146
Shuttle PRCS plume contamination analysis for Astro-2 mission
[NASA-CR-193101] p 2986 N93-27240
Welding process modelling and control
[NASA-CR-192549] p 3051 N93-27593
Combined space environment on spacecraft engineering materials
[NASA-CR-192536] p 2996 N93-28407

ALENIA AERONAUTICA, NAPLES (ITALY).
Automatization of structural analysis calculation procedure: NASTRAN pre and post processors
[ETN-93-93706] p 3100 N93-27947

ALENIA SPAZIO S.P.A., TURIN (ITALY).
Digital telecommunications are a key development factor: Integration of satellite into overall telecommunication networks as a way to harmonize social and economic implications p 3025 N93-26660

ALLIED-SIGNAL CORP., MORRISTOWN, NJ.
SNTP propellant management system p 2979 N93-26937

AMAX RESEARCH AND DEVELOPMENT CENTER, GOLDEN, CO.
Development of vanadium-phosphate catalysts for methanol production by selective oxidation of methane
[DE93-012568] p 2996 N93-28374

AMES LAB., IA.
On the differentiation of diffusion bond strength using the total acoustic energy reflected from the bond
[DE93-008073] p 3055 N93-26668
Massively parallel searching for better algorithms
[DE93-009501] p 3107 N93-27623
Radiation induced flux pinning in YBa2Cu3O(7-delta) single crystal
[DE93-008823] p 3154 N93-28347
Intermediate/high energy nuclear physics
[DE93-005927] p 3140 N93-28353

ANALEX CORP., BROOK PARK, OH.
Advanced communications technology satellite high burst rate link evaluation terminal power control and rain fade software test plan, version 1.0
[NASA-CR-189167] p 3092 N93-27071

ANALYTICAL ENGINEERING CORP., NORTH OLMSTED, OH.
Requirements management and control p 2977 N93-26916
Nuclear systems in space? Does/will the public accept them? p 2977 N93-26917

ANALYTICAL MECHANICS ASSOCIATES, INC., HAMPTON, VA.
SOYUZ escape trajectory analysis from Space Station Freedom
[NASA-CR-4508] p 2954 N93-27609

APPLIED EXPERTISE, INC., HOUSTON, TX.
Repository-Based Software Engineering Program: Working Program Management Plan
[NASA-CR-193113] p 3104 N93-28319
The repository-based software engineering program: Redefining AdaNET as a mainstream NASA source
[NASA-CR-193114] p 3104 N93-28328

APPLIED RESEARCH, INC., HUNTSVILLE, AL.
Analysis of electro-optic materials properties on guided wave devices
[AD-A262787] p 3148 N93-28403

APPLIED RESEARCH CORP., PORT WASHINGTON, NY.
Central star formation in early-type galaxies: Images and implications p 3202 N93-26883

APPLIED SOLAR ENERGY CORP., CITY OF INDUSTRY, CA.
High efficiency low cost GaAs/Ge cell technology p 2968 N93-27809

ARGONNE NATIONAL LAB., IL.
Further time-resolved electron-beam characterizations with optical transition radiation
[DE93-007891] p 3131 N93-26625
Overview of charged-particle beam diagnostics for the Advanced Photon Source (APS)
[DE93-007898] p 3131 N93-26626
Parallel programming with PCN
[DE93-008087] p 3105 N93-26627

Survey of foreign maglev systems
[DE93-008495] p 3049 N93-26665
GPS system simulation methodology
p 2984 N93-26990
Friction and wear performance of ion-beam deposited diamondlike carbon films on steel substrates
[DE93-007896] p 3002 N93-27050
Synergistic effects of silver films and synthetic lubricants on boundary-lubrication behavior of ceramics
[DE93-007895] p 3003 N93-27523
A hierarchical framework for coupling surface fluxes to atmospheric general circulation models: The homogeneity test
[DE93-004804] p 3072 N93-27612
Dynamics and controls in MAGLEV systems
[AD-A263087] p 3051 N93-27928
Diamond monochromator for high heat flux synchrotron x ray beams
[DE93-006799] p 3154 N93-28311
Laser cooling of a stored ion beam: A first step towards crystalline beams
[DE93-010301] p 3048 N93-28333
Magnetic properties and irreversibility behavior in Ag-sheathed Bi-based superconducting wires fabricated using a controlled melt procedure
[DE93-005554] p 3032 N93-28344
Nanophase materials assembled from atom clusters
[DE93-005559] p 3005 N93-28345
Synthesis and processing of nanostructured materials
[DE93-006413] p 3155 N93-28354

ARIZONA STATE UNIV., TEMPE.
Lunar mining of oxygen using fluorine
p 2997 N93-26680
A compressible near-wall turbulence model for boundary layer calculations p 2931 N93-27433

ARIZONA UNIV., TUCSON.
NASA Space Engineering Research Center for utilization of local planetary resources
[NASA-CR-192883] p 3206 N93-26674
Propellant production and useful materials: Hardware data from components and the systems
p 3009 N93-26675
Reduction of iron-bearing lunar minerals for the production of oxygen p 2997 N93-26676
Innovative techniques for the production of energetic radicals for lunar processing including cold plasma processing of local planetary ores p 2997 N93-26677
Beneficiation of ilmenite from lumar analog
p 2997 N93-26681
Extraction of volatiles and metals from extraterrestrial materials p 2997 N93-26682
Oxygen production on Mars and the Moon
p 3021 N93-26683
Dehydration kinetics and thermochemistry of selected hydrous phases, and simulated gas release pattern in carbonaceous chondrites p 2997 N93-26684
Melt-processing of lunar ceramics
p 3007 N93-26685
Recovery and separation of precious metals from space p 3001 N93-26686
Development and mechanical properties of construction materials from lunar simulant p 3021 N93-26687
Lareg area solar cells from lunar materials
p 3066 N93-26688
Determination of lunar ilmenite abundance from remotely sensed data p 3208 N93-26689
Composition of near-Earth asteroids
p 3205 N93-26690
Spacewatch discovery of near-Earth asteroids
p 3205 N93-26691
Abundance of He-3 and other solar-wind-derived volatiles in lunar soil p 3209 N93-26692
Modeling, simulation, and high-autonomy control of a Martian oxygen production plant p 3021 N93-26693
Development of a material processing plant for lunar soil p 3021 N93-26694
Full system engineering design and operation of an oxygen plant p 3021 N93-26696
An integrated database with system optimization and design features p 3168 N93-26697
The Steward Observatory asteroid relational database
p 3168 N93-26698
Absorption spectra of Q 0000-263 and Q 1442+101

A predicate transformer for unification
[CWI-CS-R9227] p 3096 N93-27391

An analytical solution to the consistency problem for the Littlewood model in software reliability
[CWI-BS-R9129] p 3096 N93-27392

A general model for maintenance of complex systems
[CWI-BS-R9201] p 3124 N93-27393

Abstraction in real time process algebra
[CWI-CS-R9144] p 3096 N93-27492

An executable semantics for a subset of COLD
[CWI-CS-R9145] p 3097 N93-27493

Towards a design theory for database triggers
[CWI-CS-R9201] p 3166 N93-27494

Survey of continuities of curves and surfaces
[CWI-CS-R9202] p 3097 N93-27495

Bisimulation semantics for concurrency with atomicity and action refinement
[CWI-CS-R9210] p 3116 N93-27498

Processes as terms: Non-well-founded models for bisimulation
[CWI-CS-R9211] p 3097 N93-27499

Provably recursive programs
[CWI-CS-R9212] p 3097 N93-27500

A primitive recursive set theory and AFA: On the logical complexity of the largest bisimulation
[CWI-CS-R9213] p 3097 N93-27501

More examples in MANIFOLD
[CWI-CS-R9214] p 3097 N93-27502

A simple specification language combining processes, time, and data
[CWI-CS-R9209] p 3097 N93-27525

Grid minors of graphs on the torus
[CWI-BS-R9205] p 3117 N93-27526

Verification of parallel systems via decomposition
[CWI-CS-R9203] p 3107 N93-27539

On the adequacy of graph rewriting for simulating term rewriting
[CWI-CS-R9204] p 3098 N93-27540

On transfinite abstract reduction systems
[CWI-CS-R9205] p 3117 N93-27550

Asynchronous communication in process algebra (extended abstract)
[CWI-CS-R9206] p 3098 N93-27551

Computable processes and bisimulation equivalence
[CWI-CS-R9207] p 3098 N93-27552

XInPosse: Structural simulation for graphics hardware
[CWI-CS-R9208] p 3098 N93-27553

Approximate analysis of an M/G/1 priority queue with priority changes due to impatience
[CWI-BS-R9202] p 3127 N93-27606

Classification of minimal graphs of given face-width on the torus
[CWI-BS-R9203] p 3117 N93-27607

Graphs on the torus and geometry of numbers
[CWI-BS-R9204] p 3117 N93-27608

Complexity of scheduling multiprocessor tasks with prespecified processor allocations
[CWI-BS-R9211] p 3108 N93-27990

Mathematical morphology as a tool for shape description
[CWI-BS-R9216] p 3119 N93-27991

Integral solution to systems Ax less than or equal to b
[CWI-BS-R9217] p 3119 N93-27992

Odd paths and odd circuits in planar graphs with two odd faces
[CWI-BS-R9218] p 3119 N93-27993

Origin tracking
[CWI-CS-R9230] p 3100 N93-27994

Regular processes with relative time and silent steps
[CWI-CS-R9231] p 3101 N93-27995

A brief survey of zero-knowledge proofs
[CWI-CS-R9232] p 3101 N93-27996

Specification and generation of a lambda-calculus environment
[CWI-CS-R9233] p 3101 N93-27997

A simple proof of confluence for weakly orthogonal combinatory reduction systems
[CWI-CS-R9234] p 3119 N93-27998

Optimal multi-writer multi-reader atomic register
[CWI-CS-R9235] p 3091 N93-27999

Linear-time snapshot protocols for unbalanced systems
[CWI-CS-R9236] p 3091 N93-28000

Dynamic modal predicate logic
[CWI-CS-R9237] p 3101 N93-28001

Note on the performance of direct and indirect Runge-Kutta-Nystroem methods
[CWI-NM-R9214] p 3120 N93-28082

Divisibility properties of integers x and k satisfying 1(exp k) + 2(exp k) +...+ (x - 1)(exp k) = x(exp k)
[CWI-NM-R9215] p 3120 N93-28083

Preconditioning in implicit initial value problem methods on parallel computers
[CWI-NM-R9216] p 3108 N93-28084

Hyperasymptotics and the Stokes' phenomenon
[CWI-AM-R9206] p 3120 N93-28085

On Zeilberger's algorithm and its q-analogue: A rigorous description
[CWI-AM-R9207] p 3101 N93-28086

Finite interpolation of random fields
[CWI-BS-R9210] p 3126 N93-28087

Gray-scale granulometries compatible with spatial scalings
[CWI-BS-R9212] p 3121 N93-28088

Incidence and lattice calculus with applications to stochastic geometry and image analysis
[CWI-BS-R9213] p 3126 N93-28089

A two-machine repair model with variable repair rate
[CWI-BS-R9214] p 3110 N93-28090

Bootstrapping multivariable U-quantiles and related statistics
[CWI-BS-R9215] p 3126 N93-28091

An architecture for interactive raster graphics
[CWI-CS-R9229] p 3102 N93-28102

Faster Phong shading
[CWI-CS-R9228] p 3103 N93-28221

CENTRE D'ETUDES ET DE RECHERCHES, TOULOUSE (FRANCE).

Three-dimensional compressible stability-transition calculations using the spatial theory
p 2931 N93-27431

Investigations on entropy layer along hypersonic hyperboloids using a defect boundary layer
p 2937 N93-27462

Three-dimensional boundary layer calculation by a characteristic method p 2938 N93-27467

CHALMERS UNIV. OF TECHNOLOGY, GOETEBORG (SWEDEN).

Thermionic emission current in a single barrier varactor p 3012 N93-27735

Progress on single barrier varactors for submillimeter wave power generation p 3012 N93-27736

Double dipole antenna SIS receivers at 100 and 400 GHz p 3013 N93-27744

CHEMICAL RESEARCH AND DEVELOPMENT CENTER, ABERDEEN PROVING GROUND, MD.

[DE93-006827] p 3157 N93-28312
X ray and gamma ray spectroscopy of solids under pressure
[DE93-010966] p 2996 N93-28360

WATERLOO UNIV. (ONTARIO).
The Hopping Lemma p 3115 N93-27473

WEST VIRGINIA UNIV., MORGANTOWN.
The ground vortex flow field associated with a jet in a cross flow impinging on a ground plane for uniform and annular turbulent axisymmetric jets
[NASA-CR-4513] p 2939 N93-28449

WESTERN ECO-SYSTEMS TECHNOLOGY, INC., CHEYENNE, WY.
Statistical inference procedures for probability selection functions in long-term monitoring programs
[PB93-163012] p 3123 N93-26631

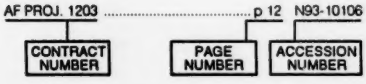
WESTINGHOUSE ELECTRIC CORP., MADISON, PA.
The use of automation and robotic systems to establish and maintain lunar base operations
p 3111 N93-27982

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Rover/NERVA-derived near-term nuclear propulsion
p 2977 N93-26918
WESTINGHOUSE HANFORD CO., RICHLAND, WA.
Survey of fiber-optic sensor for remote sensing in radiologically and chemically harsh environments
[DE93-004998] p 3062 N93-26624
Stress analysis and evaluation of a rectangular pressure vessel
[DE93-004990] p 3060 N93-28059
WESTINGHOUSE SAVANNAH RIVER CO., AIKEN, SC.
Mesoscale atmospheric modeling for emergency response
[DE93-008509] p 3071 N93-26666
Orientation dependency of mechanical properties of 1950's vintage Type 304 stainless steel weldment components before and after low temperature neutron irradiation
[DE93-005168] p 2998 N93-26940
Strategic plan for scientific computing
[DE93-006875] p 3090 N93-27614
Data banks of chemical substances and their toxicity
[DE93-006170] p 3167 N93-28005
WISCONSIN UNIV., MADISON.
Powering the superwind in NGC 253
p 3203 N93-26893
WOODS HOLE OCEANOGRAPHIC INST., MA.
Moored instrument for time series studies of primary production and other microbial rate processes
[DE93-010148] p 3079 N93-26943
Array data acquisition with wireless LAN telemetry as applied to shallow water tomography in the Barents sea
[AD-A262183] p 2957 N93-27681
Organic geochemistry of continental margin and deep ocean sediments
[DE93-011045] p 3080 N93-28336
WRIGHT LAB., WRIGHT-PATTERSON AFB, OH.
Thermomechanical fatigue behavior of a silicon carbide fiber-reinforced calcium aluminosilicate glass-ceramic matrix composite
[AD-A262265] p 2991 N93-27676
An assessment of inlet total-pressure distortion requirements for the Compressor Research Facility (CFR)
[AD-A262299] p 2945 N93-27679
WYLE LABS., INC., HUNTSVILLE, AL.
Increased fire and toxic contaminant detection responsibility by use of distributed, aspirating sensors
p 2965 N93-27722
WYOMING UNIV., LARAMIE.
Some effects of dust on photometry of high-z galaxies: Confounding the effects of evolution
p 3173 N93-26715
The fate of captured gas: NGC 3077 and star formation in the M81 system p 3186 N93-26798
A comparison of extinction curves for dust in galaxies of different Hubble types p 3187 N93-26805

Y

YALE UNIV., NEW HAVEN, CT.
From harmonic to anharmonic oscillators
p 3146 N93-27352
Development of a system for accurate forecasting of solar activity
[AD-A262450] p 3218 N93-27827
Efficient communication for parallel computing
[AD-A261966] p 3108 N93-27951

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

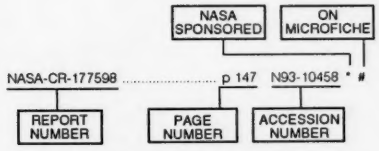
REPORT NUMBER INDEX

Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

APPENDIX

NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (STAR) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications
- Other U.S. Government agency and foreign patents and patent applications
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *International Aerospace Abstracts (IAA). IAA is issued on the 1st and 15th of each month and is available from the American* Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, NY 10019.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points—central points of document acquisition and control within qualified organizations—or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

16 SPACE TRANSPORTATION

Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance*. For space suits see *54 Man/System Technology and Life Support*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft für wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on page A-8. These libraries are *not* sales outlets. A local library can contact a regional depository to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR.* European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *IAA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00/domestic, $117.00/foreign. Single copy prices: $33.00/domestic, $41.00/foreign.

An annual, cumulative *STAR Index* is also available at $54.00/domestic, $65.00/foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Microfiche of the abstract sections of *STAR* are available, on annual subscription, from CASI. Annual subscription rates are $216.00/North America, $432.00/foreign.
